

B63H

MARINE PROPULSION OR STEERING (propulsion of air-cushion vehicles [B60V 1/14](#); specially adapted for submarines, other than nuclear propulsion, [B63G](#); specially adapted for torpedoes [F42B 19/00](#))

Definition statement

This place covers:

Propulsive elements directly acting on water, e.g.:

- Paddle wheels.
- Voith-Schneider propellers.
- Propellers and propeller blades.
- Endless-track type propulsive elements.
- Fishtail-type propulsive elements.
- Propeller-blade pitch changing.
- Arrangements of propulsive elements directly acting on water.

Effecting propulsion by jets, e.g. using reaction principle.

- Jet propulsion using ambient water as propulsive medium.
- Jet propulsion using steam or gas as propulsive medium.
- Arrangements of propulsive elements directly acting on air.

Propulsive devices directly acted on by wind, e.g.:

- Sails
- Magnus-rotors
- Arrangements of propulsive devices directly acted on by wind
- Wind motors driving water-engaging propulsive elements.

Effecting propulsion by use of vessel-mounted driving mechanisms co-operating with anchored chains or the like.

Effecting propulsion by muscle power

Effecting propulsion of vessels, not otherwise provided for, e.g.

- Using energy from ambient water.
- By direct engagement of the ground.

Outboard propulsion units and Z-drives.

Use of propulsion power plant or units on vessels:

- Use of e.g. steam, internal combustion, electric or nuclear power plants
- Arrangements of power plant control exterior of the engine room
- Mounting of propulsion plant or unit
- Arrangements of propulsion-unit exhaust uptakes
- Apparatus or methods specially adapted for use on marine vessels, for handling power plant or unit liquids, e.g. lubricants, coolants, fuels or the like

Transmitting power from propulsion power plant to propulsive elements, e.g.

- Mechanical power transmission
- Electric or hydraulic power transmission
- Propeller or paddle-wheel shafts

Definition statement

- Bearings and seals for propeller shafts
- Attachment of propellers on shafts

Steering and dynamic anchoring

- Initiating means for steering
- Steering gear
- Rudders
- Steering or dynamic anchoring by propulsive elements, like propellers or jets

Slowing down of vessels other than by propulsive elements

Relationships with other classification places

[B63H](#) is the general home of means for propelling, steering and dynamic positioning, as well as for slowing down of ships and other floating structures, and covers in particular propulsive elements like propellers, jets, sails, oars and their respective arrangement on vessels, as well as arrangements and adaptations of propulsion power plants, and of the power transmission to the propulsive elements. The means for steering and dynamic anchoring cover in particular steering gear, rudders and propulsive elements.

Whilst marine propulsive devices directly acted on by wind and the arrangement thereof on vessels are found in [B63H](#), [B63B](#) provides for masts of sailing boats and for sail arrangements, sails and masts for wind-driven boards, land-borne wind-propelled vehicles are classified in [B62B](#), shaping of substances in plastic state and after-treatment of shaped products in general is found in [B29C](#), and [B32B](#) provides for layered products in general.

While the propulsion and steering of ships and other waterborne vessels is classified in [B63H](#), [B63C 11/42](#) provides for diving chambers with independent propulsion or direction control, as well as for unmanned underwater vessels remotely operated by using an umbilical, marine propulsion and steering peculiar to submarines, other than nuclear propulsion is provided for in [B63G](#), arrangements for propulsion and steering of amphibious vehicles are classified in [B60F](#), [B60V](#) provides for propulsion and control of air-cushion vehicles, aircraft propellers and aircraft flight control are covered by [B64C](#), [B64D](#) provides for aircraft power plants and power transmission, and propulsion and steering peculiar to torpedoes is found in [F42B 19/00](#).

Whilst the mounting of propulsion power plants or units is classified in [B63H](#), [B63B 7/087](#) provides for motor mountings in inflatable boats, e.g. transom panels for outboard motors, and motor-driven surfboards are classified in [B63B 32/10](#)

Whilst [B63H](#) covers jets and thrusters for propulsion and steering, as well as for wind-driven propellers, [F03B](#) provides for machines or engines for liquids, like water turbines or water wheels, wind motors are found in [F03D](#), and [F04D](#) provides for non-positive displacement pumps in general.

While [B63H](#) covers marine propulsion by muscle power, swimming frameworks with swimmer operated driving mechanism are provided for in [A63B 35/00](#), and land-based training equipment for rowing or sculling is found in [A63B 69/06](#).

While [B63H](#) covers outboard propulsion units, the cooling of outboard marine engines is found in [F01P 3/202](#), engines of outboard propulsion units are classified in [F02B 61/045](#) and air intakes for outboard marine engines are provided for in [F02M 35/167](#).

While the use of propulsion power plant or units on vessels is covered by [B63H](#), [B63J](#) provides for driving of vessel auxiliaries, and propulsion power plants or units per se are classified in the respective relevant sub-classes, e.g. internal-combustion piston engines and combustion engines in general in [F02B](#), their control in [F02D](#), gas-turbine power plants in [F02C](#), nuclear power plant in [G21D](#), and dynamo-electric machines in [H02K](#).

Systems acting by means of fluids in general; fluid-pressure actuators, e.g. servomotors; details of fluid-pressure systems, not otherwise provided for	F15B
Transmission elements per se	F16

Special rules of classification

In this subclass, two different Indexing Schemes are used:

The first Indexing Scheme represents a further sub-division of the CPC scheme (breakdown codes). The symbols of this first Indexing Scheme are hierarchically arranged under CPC groups. They are in their scope limited by the scope of the respective symbols CPC scheme under which they are indented. This first Indexing Scheme is used for invention information and additional information.

The second Indexing Scheme is arranged under the subclass [B63B](#), and covers the range [B63B 2201/00](#) - [B63B 2241/00](#). This second Indexing Scheme is used in all subclasses under the class [B63](#) "Ships or other waterborne vessels; Related equipment". This second Indexing Scheme is used for indexing non-trivial information related to the invention information as far as for this information no place is provided for in a particular group in the class [B63](#).

The use of both Indexing Schemes is obligatory for documents published after July 2011. The contents of these groups is not complete before this date.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Dynamic anchoring	Positioning of vessels or floating structures by means of propulsive elements.
-------------------	--

Magnus effect	The phenomenon of a rotating object moving in a fluid generating a circulation and thus a lift perpendicular to the axis of rotation and to the direction of movement of the object.
Outboard drive	An outboard propulsion unit.
Outboard motor	An outboard propulsion unit comprising a motor mounted outboard integral with the power leg.
Outboard propulsion unit	A propulsion unit comprising a substantially vertical power leg mounted outboard of a hull and supporting a propulsive element.
Propeller slipstream	The current of water driven backward by a propeller.
Shrouding ring	A circular co-rotating band attached circumferentially, or at a given radius, to the rotor of a turbine, or to the blades of a propeller.
Tilt	Angular lifting movement of the outboard motor, or of the power leg from its operating position into an inoperative position with the propulsion element out of the water, and vice versa.
Trim	Angular position of the power leg relative to the boat's vertical axis when the power leg is in operating position.
Trolling plate	A plate movable in a position perpendicular to a vessel's longitudinal axis so as to slow down a moving vessel.
Universal joint	A joint between two shafts that allows for two angular degrees of freedom while being adapted for transmitting torque about the shafts' longitudinal axes between the two shafts, e.g. Cardan joint or Hooke's joint.
Z-drive	An in-board-outboard propulsion arrangement comprising an inboard motor, typically exhibiting a horizontal motor shaft, and a substantially vertical outboard power leg supporting a propulsive element, typically driven by a horizontal propeller shaft.

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

GPS	Global Positioning System
-----	---------------------------

In patent documents, the following words/expressions are often used as synonyms:

- "universal joint", "U-joint", "Cardan joint", Hooke's joint" and "gimbal"

B63H 1/00

Propulsive elements directly acting on water (jet propulsion [B63H 11/00](#))

Definition statement

This place covers:

Propulsive elements of rotary type

- With rotation axis substantially perpendicular to the propulsive direction
- Paddle wheels
- Cycloidal propellers, e.g. Voith-Schneider propellers
- With rotation axis substantially in propulsive direction
- Propellers
- Propeller blades

Definition statement

Propulsive elements of non-rotary type, e.g.

- Of endless-track type
- Of fishtail type

Relationships with other classification places

While [B63H 1/00](#) is the general home of propulsive elements directly acting on water, methods and apparatus for propeller pitch changing is provided for in [B63H 3/00](#), [B63H 5/00](#) provides for the arrangement of such propulsive elements on vessels, and for stationary water-guiding elements, water-jets and magneto-hydrodynamic propulsors are classified in [B63H 11/00](#), [B63H 16/00](#) provides for oars, sculls, paddles and the like elements for converting muscular power into propulsive action, and the attachment of propellers on shafts is found in [B63H 23/34](#).

References

Limiting references

This place does not cover:

Effecting propulsion by jets, i.e. reaction principle	B63H 11/00
---	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Propeller-blade pitch changing	B63H 3/00
Stationary water-guiding elements, e.g. formed by the shape of the ship's hull	B63H 5/00
Oars, sculls, paddles and the like elements for converting muscular power into propulsive action	B63H 16/00
Attachment of propellers on shafts	B63H 23/34
Arrangement of propulsion means on amphibious vehicles	B60F 3/0007

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Voith-Schneider propeller	A propulsor comprising a disk, typically mounted flush with the ship's bottom, and rotating about an axis perpendicular to the propulsive direction, and a plurality of vanes projecting from said disk substantially parallel to the axis of rotation and cyclically varying their angle of attack, so as to follow, in operation, a cycloidal path through the water. Cycloidal propeller.
---------------------------	--

B63H 1/02

of rotary type

References

B63H 1/15

having vibration damping means

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Anti-vibration mounting of propulsion plant	B63H 21/30
Means for damping vibration in general	F16F

B63H 1/28

Other means for improving propeller efficiency

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Water-guiding elements formed by shape of hull	B63H 5/00
--	---------------------------

B63H 3/00

Propeller-blade pitch changing {(aircraft propellers [B64C 11/30](#); rotors of turbines [F01D 7/00](#); axial wind motors [F03D 7/022](#); axial-flow pumps [F04D 29/00](#))}.

Definition statement

This place covers:

Apparatus and methods for changing the pitch of propeller-blades, e.g.

- With pitch changing elements coaxial with propeller shaft
- Using non-mechanical actuators
- With conjoint control of propeller pitch and propulsion power plant
- With propeller pitch being adjustable when the propeller is stationary

Relationships with other classification places

Whilst [B63H 3/00](#) is the home of apparatus and methods for propeller-blade pitch changing of marine propellers, [B64C 11/30](#) provides for blade pitch-changing mechanisms of aircraft propellers, machines or engines for liquids, like water turbines or water wheels are covered by [F03B](#), wind motors are found in [F03D](#), and [F04D](#) provides for non-positive displacement pumps in general.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Blade pitch-changing mechanisms for aircraft propellers and for rotors of rotorcraft	B64C 11/30
Machines or engines for liquids, e.g. water turbines or water wheels	F03B

Kaplan turbines	F03B 3/06
Wind motors	F03D
Non-positive displacement pumps	F04D

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Pitch	A measure of the angle of the blades of a screw propeller, equal to the distance forward a blade would move in one revolution if it exerted no thrust on the medium.
-------	--

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

CP propeller or CPP	Controllable-Pitch propeller
---------------------	------------------------------

In patent documents, the following words/expressions are often used with the meaning indicated:

"pitch"	"oscillating angular motion of a ship about its horizontal transverse axis", or "distance between any two successive identical parts in a series, e.g. of teeth of a cogwheel, rack, pinion, etc., or of successive paddles of a paddle wheel, measured along a circle passing through their centres".
---------	--

B63H 5/00

Arrangements on vessels of propulsion elements directly acting on water

Definition statement

This place covers:

Arrangements on vessels of propulsion elements directly acting on water, e.g.

- Arrangements of paddle wheels, e.g. of stern wheels.
- Arrangements of propellers
- Of a plurality of propellers
- Of propellers movably mounted with respect to the hull
- Mounted in ducts or rings, e.g. adjustable for steering purposes
- Mounted in recesses
- With stationary water guiding elements
- Particularly adapted for emergency situations
- Means to prevent fouling of propellers.

Relationships with other classification places

[B63H 5/00](#) is the home of arrangements of propellers, water wheels and other propulsive elements directly acting on water, in particular of propellers movably mounted with respect to the hull, e.g. of podded azimuthing propellers and the like, however, arrangements of jet propulsors are found in [B63H 11/00](#), arrangements of water engaging propulsive elements driven by wind motors are classified in [B63H 13/00](#), arrangements of water engaging propulsive elements driven by muscular power are provided for in [B63H 16/00](#), outboard propulsion units and Z-drives are found

Relationships with other classification places

in [B63H 20/00](#), and [B63H 25/42](#) provides for arrangements of movable propellers used for steering purposes only as well as for rudders carrying propellers.

References

Limiting references

This place does not cover:

Effecting propulsion by jets, i.e. reaction principle	B63H 11/00
Effecting propulsion by wind motors driving water-engaging propulsive elements	B63H 13/00
Effecting propulsion by muscle power	B63H 16/00
Outboard propulsion units, i.e. propulsion units having a substantially vertical power leg mounted outboard of a hull and terminating in a propulsion element, e.g. "outboard motors", Z-drives; Arrangements thereof on vessels	B63H 20/00
Steering or dynamic anchoring by propulsive elements other than jets; Steering or dynamic anchoring by propellers used therefor only; Steering or dynamic anchoring by rudders carrying propellers	B63H 25/42

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Fouling	The process of causing - an anchor, a propeller, a cable - to become entangled, or to be rendered immovable or incapable of working.
Podded azimuthing thruster	A propeller arrangement with a faired submerged housing carrying a propeller and comprising a drive motor or gearing, which is suspended from a substantially vertical, typically faired, strut, and which is orientable about a substantially vertical axis.

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- "podded azimuthing thruster", and "podded azimuthing propulsor"

In patent documents, the word/expression in the first column is often used instead of the word/expression in the second column, which is used in the classification scheme of this place:

"Kort-nozzle" and "ducted propeller"	"non-rotating duct or ring"
--------------------------------------	-----------------------------

In patent documents, the following words/expressions are often used with the meaning indicated:

"contra-propeller"	"a set of stationary vanes arranged in the propeller slipstream for recovering propulsive force from swirl energy".
"fouling"	"the growth of marine organisms such as barnacles in the underwater portion of a ship's hull".

B63H 5/16

characterised by being mounted in recesses; with stationary water-guiding elements; Means to prevent fouling of the propeller, e.g. guards, cages or screens

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Anti-fouling paints	C09D 5/16
---------------------	---------------------------

B63H 7/00

Propulsion directly actuated on air (jet propulsion [B63H 11/00](#))

Definition statement

This place covers:

Arrangements on vessels of propulsive devices directly acting on air such as of propellers of air-screw type for aircraft.

Relationships with other classification places

[B63H 7/00](#) covers the arrangements of propulsive device directly acting on air, e.g. of air propellers, however, effecting marine propulsion by means of jets, i.e. using the reaction principle, e.g. by means of gas jets, is provided for in [B63H 11/00](#), and air-screws of aircraft type as such are classified in [B64C 11/00](#)

Handheld cleats, cam or hooks	B63H 8/52
Clamping devices, e.g. cam or clam cleats	B63B 21/08

B63H 8/50

Accessories, e.g. repair kits or kite launching aids

Definition statement

This place covers:

Repair kits.

Kite pumps.

Kite launching aid devices.

B63H 8/54

Arrangements for connecting the user or the harness to the wishbone, e.g. trapeze lines or handgrips

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Trapeze arrangements for sail boats e.g. for dinghies	B63H 9/10
---	---------------------------

B63H 8/70

Arrangements for handling, stowing or transport thereof

Definition statement

This place covers:

Inflatable riggings.

Demountable masts.

Detachable riggings or sail sections.

B63H 9/00

Marine propulsion provided directly by wind power (wind-motors driving underwater propulsive elements [B63H 13/00](#))

Definition statement

This place covers:

Propulsive devices directly acted on by wind, and arrangements thereof on vessels.

Definition statement

Magnus rotors.

Sails and the like wind-catching surfaces, e.g.

- Construction of sails
- Arrangements of sails on vessels
- Connection of sails to masts, spars, or the like
- Running rigging, e.g. reefing equipment

Relationships with other classification places

[B63H 9/00](#) is the general home of devices which directly convert wind energy into marine propulsive force, and of the arrangements of such devices on vessels, however, sailing sledges or ice boats are found in [B62B 15/00](#), [B63B 15/00](#) provides for masts for sailing boats, and the staying thereof, while wind-driven boards and respective sail construction and arrangements are provided for in [B63B 32/00](#) and [B63H 8/00](#), while wind driven motors driving water-engaging propulsion elements are found in [B63H 13/00](#).

References

Limiting references

This place does not cover:

Wind-motors driving underwater propulsive elements	B63H 13/00
--	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Sail or rigging arrangements specially adapted for water sports boards, e.g. for windsurfing or kitesurfing	B63H 8/00
Toy kites	A63H 27/08
Arrangements in connection with propulsion power supply from nature, e.g. from wind, in general	B60K 16/00
Ice boats or sailing sledges	B62B 15/00
Kites per se	B64C 31/06
Wind motors with wind-engaging parts attached to carriages running on tracks or the like	F03D 5/04

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Furling	Rolling up a sail neatly upon its respective yard or boom.
Harness	An assembly of straps and the like for attaching a trapeze or a kite-sail control bar to the trunk of a user
Kite sail	A light sail air-borne by its own lift, and connected to the propelled ship, or user in case of kite-surfing, by means of control lines only.
Running rigging	The part of an installation for ship propulsion by means of sails, which is used for raising, lowering, reefing and controlling the sails.
Sail batten	A long, thin strip of elastic material, e.g. of fibreglass, used to support the roach of a sail, or to keep a sail flat.

Spinnaker	A large three-cornered sail of lightweight fabric, to be boomed out from the vessel's side, used for sailing on a reaching course to a downwind course.
Spinnaker pole	A boom to keep the tack of a spinnaker out from the vessel's side.
Stay	An inclined rope or cable forming part of the standing rigging, used for imparting lateral stability to a mast or the like.
Trapeze	A sliding support or a wire suspended from high on the mast, hooked on to a sailor's harness, and used for outboard balancing of wind forces.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"Flettner rotor"	"a rotating cylinder using the Magnus effect".
"harness"	" an assembly of straps and the like for attaching objects like a personal flotation device, or a self contained breathing apparatus to the trunk of a user".

B63H 9/04

using sails or like wind-catching surfaces (sail or rigging arrangements specially adapted for water sports boards, e.g. for windsurfing or kitesurfing [B63H 8/00](#))

Definition statement

This place covers:

Propulsion arrangements in a kiteboard or in a sailboat that are held by the vessel only, without assistance by a user.

References

Limiting references

This place does not cover:

Sail or rigging arrangements specially adapted for watersport boards, e.g. for windsurfing or kitesurfing	B63H 8/00

B63H 9/0671**{Moulded sails}****Definition statement**

This place covers:

Sails manufactured by shaping deformable material on moulds, e.g. thermoplastic film on heatable moulds.

B63H 9/0673**{Flying sails, e.g. spinnakers or gennakers}****Definition statement**

This place covers:

Flying sails, which are sails not attached to the forestay: examples of this type of sail are spinnakers or gennakers.

B63H 9/0678**{Laminated sails}****Definition statement**

This place covers:

Laminated sails, i.e. fibres or filaments arranged along predefined lines substantially parallel to the principal stress trajectories.

B63H 11/00**Marine propulsion by water jets****Definition statement**

This place covers:

Effecting marine propulsion by means of jet, i.e. using the reaction principle

Jet propulsion using ambient water as propulsive medium, e.g.

- By means of pumps
- Having means for deflecting the jet, e.g. for direction control of propulsive fluid
- Having means for influencing the cross-section of the jet
- Jet propulsion using steam or other gas as propulsive medium, e.g. combustion gas

Relationships with other classification places

While [B63H 11/00](#) is the general home of marine propulsion by means of jets, steering or dynamic anchoring by means of jets, the jets being used for this purpose only, as well as rudders carrying jets are classified in [B63H 25/46](#), combustion gas jet-propulsion plants in general are provided for in [F02K](#), further, [F04](#) provides for positive and non-positive displacement pumps in general, and steam generation in general is provided for in [F22](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Steering or dynamic anchoring by jets, or by rudders carrying jets	B63H 25/46
Engines or pumps in general	F01 - F04
Combustion gas jet-propulsion plants in general	F02K
Positive and non-positive displacement pumps in general	F04
Steam generation in general	F22

Special rules of classification

Outboard propulsion units comprising jets as propulsive elements are also classified in [B63H 20/00](#) and sub-groups.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Bucket-type reversing means	A single piece jet stream reversing device, e.g. Pelton bucket-shaped, which can be swivelled about a from an inoperative position outside the jet stream to an active position behind the jet.
Clamshell-type reversing means	A two-piece jet stream reversing device which comprises two half-buckets, which can be swayed from an inoperative position outside the jet stream to an active position behind the jet to jointly form a reversing bucket.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"Gill-type jet"	"a jet propulsor with an azimuthally orientable jet, and having an inlet opening and an outlet opening of the pump being substantially coplanar".
-----------------	---

B63H 13/00

Marine propulsion by wind motors driving water-engaging propulsive elements

Definition statement

This place covers:

Methods, apparatus and installations for converting wind energy into driving power for water-engaging propulsive elements.

Relationships with other classification places

While [B63H 13/00](#) is the home of installations and methods using wind turbines and other wind-driven motors for generating power, e.g. mechanical or electric, which power is used, via respective drive trains, for driving water-engaging propulsive elements, like propellers, [B63H 9/00](#) provides for propulsive devices directly acted on by wind, e.g. sails, and arrangements thereof on vessels in general, and wind motors as such are found in [F03D](#).

Wind motors	F03D

B63H 15/00

Marine propulsion by use of vessel-mounted driving mechanisms co-operating with anchored chains or the like

Definition statement

This place covers:

Apparatus, installations and methods for effecting marine propulsion by means of vessel-mounted diving mechanism which co-operate with anchored chains or the like.

Relationships with other classification places

While [B63H 15/00](#) is the home of installations and methods in which marine propulsion is effected by cooperation between a ship-borne driving mechanism and an anchored chain or the like, effecting propulsion of vessels by direct engagement with the water-bed or ground is provided for in [B63H 19/08](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Effecting propulsion of vessels by direct engagement with the water-bed or ground	B63H 19/08
---	----------------------------

Special rules of classification

Effecting marine propulsion by means of vessel-mounted muscle powered diving mechanism which co-operate with anchored chains or the like are also classified in [B63H 16/00](#).

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"chain towing"	"shipping or marine propulsion using a chain extended along the water- or river-bed for effecting propulsion".
"chain tug"	"tug using a chain extended along the water- or river-bed for effecting propulsion".

B63H 16/00

Marine propulsion by muscle power

Definition statement

This place covers:

Devices and methods for effecting propulsion by muscle power

Movable seats for oarsmen

Footrests

Oars, sculls, paddles and setting poles

Rowlocks and mountings therefor

Other apparatus for converting muscle power into propulsive effort

- For bow-facing rowing
- Using reciprocating pull cable, i.e. a strand-like member movable alternately backward and forward
- Using sliding handle or pedal, i.e. the motive force being transmitted to a propelling means by means of a lever operated by the hand or foot of the occupant
- Using rotary cranking arm

Relationships with other classification places

While [B63H 16/00](#) covers devices and methods for converting muscle power into vessel propulsion, and covers also water engaging propulsive elements like oars, paddles or poles, other marine propulsive elements as such are found in the respective main groups of this subclass [B63H](#), swimming framework, i.e. apparatus fixed to or held by the swimmer or diver, with driving mechanisms operated e.g. by muscular effort from the user is found in [A63B 35/00](#), hand-propelled vehicles as well as sledges are classified in [B62B](#), vehicles drawn by animals are covered by [B62C](#), [B62K](#) provides for cycles, and [B62M](#) covers propulsion of wheeled vehicles by immediate effort from the rider.

Attention is drawn to the following places, which may be of interest for search:

Swimming framework	A63B 35/00
Hand-propelled vehicles; Sledges	B62B
Vehicles drawn by animals	B62C
Cycles	B62K
Rider propulsion	B62M

Special rules of classification

Effecting marine propulsion by means of vessel-mounted muscle powered driving mechanisms which co-operate with anchored chains or the like is also classified in [B63H 15/00](#).

Groups [B63H 16/12](#), and its sub-group [B63H 16/14](#) are no longer used for classification. Documents in the backlog are in the process of being reclassified to [B63H 16/16](#) - [B63H 16/20](#).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Oar	A long slender bar used for propelling a boat, widened and flattened at one end into a blade for interaction with the water, pivotally supported in the middle portion of its length, and actuated by muscular force application onto the other end.
Paddle	A handheld propulsion device comprising a slender bar with a broad, spade-like water-engaging blade on one end, or on both ends.
Pole	A stake used for pushing boats in shallow water by interaction with the ground.
Scull	An oar used in pairs by a single user sitting midway between the sides of the boat.
Sculling	Effecting ship propulsion by muscular power using pairs of sculls.
Thwart	A seat across a boat, on which the rower sits; a rower's bench; an oarsmen's seat.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"pedalo"	"small muscle propelled watercraft with rotating cranking arm mechanism for driving a propulsion element".
----------	--

B63H 16/12

{using hand levers, cranks, pedals, or the like, e.g. water cycles, boats propelled by boat-mounted pedal cycles}

Special rules of classification

This group and its sub-group [B63H 16/14](#) are no longer used for classification. Documents are in the process of being reclassified to [B63H 16/16](#) - [B63H 16/20](#).

B63H 19/00

Marine propulsion not otherwise provided for

Definition statement

This place covers:

Effecting marine propulsion by using energy derived from movement of ambient water, e.g.

- From rolling or pitching of the vessel
- Propelled by water current

Effecting marine propulsion by discharging gas into ambient water, other than by jet action

Effecting marine propulsion by direct engagement with water-bed or ground

Other devices and methods for effecting marine propulsion

Relationships with other classification places

[B63H 19/00](#) is the residual place for devices, arrangements and methods for effecting marine propulsion, and covers propulsion effected by using energy form movement of ambient water, by gas discharge into the ambient water, other than by jets, and by direct engagement with the water-bed or ground, however pushing a boat by muscular power using poles interacting with the ground is provided for in [B63H 16/04](#).

B63H 20/00

Outboard propulsion units, e.g. outboard motors or Z-drives; Arrangements thereof on vessels

Definition statement

This place covers:

Outboard propulsion units, i.e. propulsion units having a substantially vertical power leg mounted outboard of a hull and terminating in a propulsion element, e.g.

- Outboard motors
- Z-drives
- Trolling propulsion units

Arrangements of outboard propulsion units on vessels

Mounting of outboard propulsion units, e.g.

- Mounting in a well
- Mounting on an intermediate support

Means enabling movement of the position of the propulsion element, e.g. for trim, tilt, or steering

Transmission between propulsion power unit and propulsion element, e.g.

- Transmissions allowing for movement of the propulsion element
- Transmissions with provision for reverse drive

Arrangements, apparatus and method for handling fluids in outboard propulsion units, e.g.

- For handling lubrication liquids
- For handling exhaust gas

For handling cooling-water

Housings of outboard propulsion units, e.g. with stabilizing fins or rudders

Transporting or testing stands for outboard propulsion units

Use for outboard propulsion units as pumps

Protection of power legs, e.g. when not in use

Relationships with other classification places

While [B63H 20/00](#) is the home of propulsion units which comprise a substantially vertical power leg arranged outboard of the vessel, which power terminates in a propulsion element, which typically engages the ambient water, wherein the power leg may carry a power generator, such as in IC-engine, or wherein an inboard motor co-operates with the propulsion element by a transmission line in Z-configuration, as well as of the arrangement thereof on vessels, hand carts for transporting outboard units are classified in [B62B](#); [B63B 7/087](#) provides for transom panels on inflatable boats for mounting outboard motors, [B63B 35/665](#) provides for floating tug-type propeller units, inboard arrangements of propellers movably mounted with respect to the hull, e.g. podded azimuthing thrusters are classified in [B63H 5/125](#), rudders carrying propellers are provided for in [B63H 25/42](#), rudders carrying jets have their home in [B63H 25/46](#), and [F02B 61/045](#) provides for outboard marine engines per se.

Special rules of classification

Outboard propulsion units comprising jets as propulsive elements are also classified in [B63H 11/00](#) and sub-groups.

The surface formed by the output flange of the engine of the outboard propulsion unit and the virtual nutshell around the engine form the interface between engine related classes [F01](#) - [F04](#) and the outboard drive related aspects in [B63H 20/00](#)

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Marine outboard engine	An engine particularly adapted for use in an outboard motor.
Trolling propulsion unit	A small outboard motor, typically electric, particularly adapted for low speed propulsion, e.g. of fishing boats.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"trolling"	"trawling" or "low speed towing of a trawl".
------------	--

B63H 20/08

Means enabling movement of the position of the propulsion element, e.g. for trim, tilt or steering; Control of trim or tilt (initiating means for steering [B63H 25/02](#))

B63H 21/00

Use of propulsion power plant or units on vessels

Definition statement

This place covers:

Use of propulsion power plant or units on vessels, i.e. arrangements of propulsion power plant or units on vessels and to some extent it includes adaptations of such plant or units to facilitate such arrangements, e.g. for

- Steam driven vessels
- Motor-driven vessels
- By internal-combustion engines
- By gas turbines
- By electric motor
- Vessels powered by land vehicles supported by the vessel
- Vessels powered by nuclear energy
- Vessels powered by combinations of different types or propulsion units

Propulsion power units controlled from exterior of the engine room, e.g. from the navigation bridge

Mounting of propulsion power plant or unit, e.g. for anti-vibration purposes

Arrangements of propulsion-unit exhaust uptakes.

Apparatus or methods for handling power plant or unit liquids, specially adapted for use on marine vessels.

Relationships with other classification places

[B63H 21/00](#) is the general home of arrangements of propulsion power plant or units on vessels, as well as, to some extent, of adaptations of apparatus and methods for use on marine vessels for facilitating such arrangements, however, propulsion power plant or units per se are classified in the classes [F01](#) - [F04](#), [F22](#), [G21](#) and [H02](#), further, electrically-propelled vehicles in general are classified in [B60L](#), [B60W](#) provides for conjoint control of vehicle sub-units of different type or different function, hull reinforcements for carrying propulsion power plant or units are provided for in [B63B 3/70](#), the propulsion of submarines, with the exception of propulsion by nuclear power, is classified in [B63G 8/08](#), [B63H 20/00](#) provides for the use of outboard propulsion units, such as outboard motors and Z-drives, electric power transmission from power plant or unit to propulsive elements is found in [B63H 23/24](#), lubrication of machines or engines in general is found in [F01M](#), [F01P 3/207](#) provides for cooling circuits with liquid-to-liquid heat exchanging relative to marine vessels, controlling of engines peculiar to engines driving variable pitch propellers is found in [F02D 29/02](#), control levers in general are classified in [G05G](#), and [G08B 9/00](#) provides for order telegraphs per se.

Transmitting power from propulsion power plant to propulsive elements (adaptation of transmission to allow adjustment in direction of propellers [B63H 5/125](#); transmission between wind motors and propulsive elements [B63H 13/00](#); in outboard propulsion units [B63H 20/14](#); adaptation of transmission to allow adjustment of location of propellers [B63H 20/08](#))

Definition statement

This place covers:

Devices, arrangements and methods for transmitting power from propulsion power plant to propulsive elements, e.g.

- By mechanical gearing
- By non-mechanical gearing, e.g. electric or fluid
- With synchronisation of propulsive elements
- Characterised by use of clutches

Propeller or paddle wheel shafts, and devices or arrangements for use with the same, e.g.

- Bearings or seals specially adapted for propeller shafts
- Propeller attachment on shafts
- Shaft tubes and shaft tube seals

Relationships with other classification places

While [B63H 23/00](#) is the home of devices, arrangements and methods adapted for marine propulsion power transmission between power generator or prime mover and propulsive elements, propeller-shaft tunnels in ship's hulls are classified in [B63B 11/06](#), [B63H 3/00](#) provides for arrangements and methods for propeller-blade pitch changing, adaptations of transmissions to allow adjustment in location or direction of propellers arranged in-board, e.g. in podded azimuthing propulsors, are classified in [B63H 5/125](#), transmissions between wind motors and propulsive elements are found in [B63H 13/00](#), transmissions in apparatus for converting muscle power into propulsive effort are covered by [B63H 16/08](#), [B63H 20/08](#) provides for adaptations of transmission in outboard propulsion units to allow for adjustment of the location of the propulsive element, e.g. for trim, tilt or steering, and [B63H 20/14](#), provides for transmissions in outboard propulsion units between propulsion power unit and propulsive element, e.g. including means for moving propulsion element in a horizontal plane only, such as for steering, or with provision for reverse drive, and [B63H 25/42](#) covers adaptations of transmissions to allow steering or dynamic anchoring by propellers carried on rudders, [B63J 3/00](#) covers driving auxiliaries on vessels, [B60K](#) provides for arrangement and mounting of transmissions in vehicles in general, and transmission elements per se are found in [F16](#), in particular, in [F16C](#) shafts in general, in [F16D 1/06](#) attachments or members on a shaft in general, in [F16H](#) gearing, e.g. toothed gearing, per se, and in [F16J](#) shaft-tube seals per se.

Gearing, e.g. toothed gearing per se	F16H
Shaft-tube seals per se	F16J
Dynamo-electric machines per se	H02K

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Propeller slipstream	The current of water driven backward by a propeller.
Shaft tube	A tubular structure, in particular in the stern post or stern frame of a vessel, which is adapted for sealing and bearing the tail shaft of a propeller-shaft; a stern tube.
Stern post	A strong structural member extending upward from the keel at the stern, often comprising a rudder shoe and a stern boss.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

"prime mover"	"main engine" or "main power generator (of propulsive energy)".
"tail shaft"	"part of the propeller shaft which extends through the shaft tube".

B63H 23/10

Steering; Slowing-down otherwise than by use of propulsive elements (using movably-installed outboard propulsion units [B63H 20/00](#)); Dynamic anchoring, i.e. positioning vessels by means of main or auxiliary propulsive elements

Definition statement

This place covers:

Steering

- Initiating means for steering, e.g. steering wheels, joysticks, or by automatic means

Steering by rudders

- Steering gear, e.g. power assisted
- Rudder position indicators
- Rudders
- Rudders using Magnus effect

Definition statement

Steering or dynamic anchoring using active propulsive elements

- By propulsive elements other than jets, e.g. propellers
- By propellers used therefor only
- by rudders carrying propellers
- By jets
- By rudders carrying jets

Steering or slowing down otherwise than by propulsive elements

- By extensible flaps
- By deflection of the propeller slipstream otherwise than by rudder

Parts for marine steering not otherwise provided for

Relationships with other classification places

While [B63H 25/00](#) is the general home for marine steering, dynamic anchoring of vessels by means of propulsive elements, and for slowing down of vessels other than by propulsive elements, stern posts are provided for in [B63B 3/40](#), [B63B 21/00](#) covers anchoring other than dynamic, [B63B 39/08](#) provides for auxiliary jets or propellers used for decreasing pitch, roll or the like unwanted vessel movements, [B63G 8/14](#) provides for control of attitude or depth of underwater vessels, e.g. submarines, steering using adjustably-mounted propeller ducts or rings is classified in [B63H 5/14](#), [B63H 11/00](#) covers main propulsion jet which can be deflected or directed for steering or dynamic anchoring purpose, steering using movably installed outboard propulsion units is provided for in [B63H 20/00](#), and [B63H 20/34](#) covers housings or outboard propulsion units comprising rudders and the like, levers or the like for controlling the engine or the transmission, e.g. single hand control levers or joysticks are provided for in [B63H 21/213](#), [F42B 19/01](#) covers steering control of torpedoes, e.g. of depth, [G05D 1/00](#) provides for control aspects of position, course, altitude, or attitude control of water vehicles, and [G08G 3/00](#) covers traffic control systems for marine craft.

Control or attitude or depth of underwater vessels, e.g. submarines	B63G 8/14

Steering control of torpedoes, e.g. of depth	F42B 19/01
Control aspects of systems for waterborne vessel position control	G05D 1/00
Traffic control systems for marine craft	G08G 3/00

Special rules of classification

In this main group, subject-matter concerning the control of position or course of vehicles in two dimensions, in particular for waterborne vehicles and for dynamic anchoring, is also classified in the respective subgroups of [G05D 1/43](#) (reference is made to the Special rules of classification within main group [G01D 1/00](#)).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Pitch	The oscillating angular motion of a ship about its horizontal transverse axis.
Roll	The oscillating angular motion of a ship about its longitudinal axis.
Propeller slipstream	The current of water driven backward by a propeller.

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

GPS	Global Positioning System
-----	---------------------------

In patent documents, the word/expression in the first column is often used instead of the word/expression in the second column, which is used in the classification scheme of this place:

"propeller wake"	"propeller slipstream"
------------------	------------------------

In patent documents, the following words/expressions are often used with the meaning indicated:

"Flettner rotor"	"a rotating cylinder using the Magnus effect".
"joystick"	"a single hand control lever for controlling vessel position, course and propulsion".
"pitch"	"a measure of the angle of the blades of a screw propeller, equal to the distance forward a blade would move in one revolution if it exerted no thrust on the medium", or "distance between any two successive identical parts in a series, e.g. of teeth of a cogwheel, rack, pinion, etc., or of successive paddles of a paddle wheel, measured along a circle passing through their centres".
"marine traffic control system"	"arrangements, located in marine craft or external thereof, for controlling marine craft within a traffic environment, e.g. anti-collision systems".
