

D21C

PRODUCTION OF CELLULOSE BY REMOVING NON-CELLULOSE SUBSTANCES FROM CELLULOSE-CONTAINING MATERIALS; REGENERATION OF PULPING LIQUORS; APPARATUS THEREFOR

Definition statement

This place covers:

Production of cellulose by removing non-cellulose substances from cellulose containing material. This subclass also embraces the after treatment of cellulose pulp and the regeneration of pulp liquors. It further also covers different aspects of digesters for pulping cellulosic material.

Relationships with other classification places

Subclass [D21B](#) covers fibrous raw material or their mechanical treatment.

Subclass [D21D](#) covers treatment of materials before passing to the paper-making machine.

Subclass [D21F](#) covers paper-making machines and methods for producing paper thereon.

Subclass [D21H](#) covers pulp compositions (not covered by subclasses of [D21C](#) and [D21D](#)), impregnating or coating of paper, treatment of finished paper and paper not otherwise provided for.

Subclass [C08B](#) covers polysaccharides and derivatives thereof.

Limiting references

This place does not cover:

Production of cellulose by mechanical treatment	D21B
Further preparation or after-treatment of the pulp	D21D
De-watering in general	F26B

Special rules of classification

The invention per se should be classified in the last appropriate place, if possible. Ideally, one group should be given for covering the main aspect of the invention per se. Exceptionally, the core of the invention may also be classified by using several groups (up to three).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

bagasse	fibre remaining after the extraction of the sugar-bearing juice from sugarcane.
bleaching	treatment of lignocellulosic material to obtain a pulp/paper having an increased brightness.
cellulose	structural component of the primary cell wall of green plants. It is an organic compound with the formula $(C_6H_{10}O_5)_n$ and is the major constituent of paper, paper-board and of textiles made from cotton, linen and other plant fibres.
delignification	treatment of lignocellulosic material to remove a part of the lignin.
lignocellulosic material	cellulosic material which also comprises lignin.

pulp	a dispersion [e.g. an aqueous suspension] comprising cellulosic fibres and optional additives; it may also be referred to as "stock", "furnish" or "slurry".

D21C 1/00

Pretreatment of the finely-divided materials before digesting (of waste paper [D21C 5/02](#))

Definition statement

This place covers:

Different pre-treatments (e.g. impregnation) of finely divided cellulosic containing material using e.g. water, steam, acids, alkaline compounds, oxygen generating compounds or physical methods for facilitating impregnation.

D21C 3/00

Pulping cellulose-containing materials (digesters [D21C 7/00](#))

Definition statement

This place covers:

Pulping with inorganic bases or alkaline reacting compounds, e.g. the sulphate process

Pulping with acid, acid salts or acid anhydrides

Pulping with sulphur dioxide, sulphurous acid, bisulphites or sulphites

Pulping with nitrogen oxides, nitric acid, nitrates or nitrites

Pulping with organic solvents or in solvent environment

Other features of the pulping process

Digesters	D21C 7/00
-----------	---------------------------

D21C 5/00

Other processes for obtaining cellulose, e.g. cooking cotton linters (obtaining fibres for spinning [D01C](#)); {Processes characterised by the choice of cellulose-containing starting materials}

Definition statement

This place covers:

Other processes for obtaining cellulose such as:

- cooking cotton linters
- processes characterised by the choice of cellulose-containing starting material
- treatment of cellulose-containing material with microorganisms or enzymes
- working-up waste paper
- working-up waste paper, e.g. de-inking

De-inking of waste paper using flotation	D21B 1/325
Pulp from non-woody plants or crops, e.g. cotton, flax, straw, bagasse	D21H 11/12
Pulp from secondary fibres	D21H 11/14
Microorganisms or enzymes added to the pulp or as a paper impregnating material	D21H 17/005

D21C 7/00

Digesters

Definition statement

This place covers:

This group refers to structural features of the digester, i.e. defining different types or parts of the digester, e.g. rotary digesters, linings, feeding devices, discharge devices, heating devices, devices for regulating or controlling, means for circulating the lye (e.g. white or black liquor) or safety devices.

Multistage (pulping) processes	D21C 3/26

Processes or apparatuses for adding material to the pulp or paper; controlling or regulating not limited to any particular process or apparatus	D21H 23/78
---	----------------------------

D21C 9/00

After-treatment of cellulose pulp, e.g. of wood pulp, or cotton linters {; Treatment of dilute or dewatered pulp or process improvement taking place after obtaining the raw cellulosic material and not provided for elsewhere (polysaccharides, derivatives thereof [C08B](#); paper-making [D21B](#) - [D21H](#))}

Definition statement

This place covers:

Modification of pulp properties

Washing

Displacing cooking or pulp-treating liquors contained in the pulps by fluids, e.g. wash water or other pulp treating agents

Removal of fats, resin pitch or waxes

Chemical or physical purification i.e. refining of crude cellulose by removing non-cellulose contaminants, optionally in combination with bleaching

Bleaching, e.g with halogen or halogen containing compounds, with ClO₂ or chlorites, with oxygen or its allotropic modifications, with ozone, with per compounds such as peroxides or peracids

Apparatus for bleaching

De-watering

Elimination of cooking or pulp-treating liquors from the pulp

De-watering in general	F26B

D21C 11/00

Regeneration of pulp liquors {or effluent waste waters}

Definition statement

This place covers:

Aspects concerning the production and the treatment of green and white liquors, e.g. causticizing green liquor

Combustion of pulp liquors

Concentration spent liquors by evaporation

Deodorisation or elimination of malodorous compounds, e.g. sulphur compounds such as hydrogen sulphide and mercaptans, for gas streams

Introduction of auxiliary substances into the regenerating system in order to improve the performance of certain steps of the latter, the presence of these substances being confined to the regeneration cycle

Recovery of by-products, i.e. compounds other than those necessary for pulping

Regeneration of alkali lye, of pulp liquors or effluent waste waters, of acid, neutral or alkaline sulphite lye

Treatment of pulp gases or of gases arising from various sources in pulp and paper mills

Recovery of the heat content in the gases

Regeneration of gaseous SO₂, e.g. arising from liquors containing sulphur compounds

Wet combustion

Treatment of pulp liquor without previous evaporation, by oxidation of liquors remaining at least partially in the liquid phase, e.g. by application of pressure
