**E04B**

GENERAL BUILDING CONSTRUCTIONS; WALLS, e.g. PARTITIONS; ROOFS; FLOORS; CEILINGS; INSULATION OR OTHER PROTECTION OF BUILDINGS (border constructions of opening in walls, floors or ceilings **E06B 1/00**; (electromagnetic shielding **H05K 9/0001**))

**Definition statement**

This place covers:

Building constructions, i.e. construction of edifices, their structural or non structural walls, their roof structures, their floor structures, suspended or false ceilings;

Insulation of buildings or other protection of buildings.

**References**

**Limiting references**

This place does not cover:

E04B 1/00

Constructions in general; Structures which are not restricted either to walls, e.g. partitions, or floors or ceilings or roofs (scaffolds, shutterings E04G; structures specially adapted for buildings for special purposes, general layout of buildings, e.g. modular co-ordination, E04H; the particular parts of buildings, see the relevant groups for those parts)

Definition statement

This place covers:

Building constructions in general, i.e. construction of edifices; Structures of buildings which are not restricted either to walls, or floors or ceilings or roofs.

Special structures and methods of construction of buildings, e.g. arched, movable, collapsible, box-like structures; Connections for building structures, e.g. connections of slab-shaped or elongated members; Insulation or other protection of buildings, e.g. against water-damage, heat, sound, fire.

E04B 1/0007

{Base structures; Cellars}

Definition statement

This place covers:

Cellars, basements, also retrofitted under existing buildings;

Crawl spaces.

Relationships with other classification places

This subgroup covers foundations with the emphasis on the connection to a superstructure, as opposed to E02D where the emphasis is on the connection to the ground;

**E04B 1/12**

the elements consisting of other material

**Definition statement**

This place covers:

Structures with elements consisting of specified materials other than concrete, stone-like material, metal or wood.
E04B 1/14

the elements being composed of two or more materials (of reinforced concrete E04B 1/04)

Definition statement

This place covers:
Structures with elements consisting of the combination of two or more specified structural materials.

References

E04B 1/34357
{Foldable or retractable structures}

References

Limiting references

This place does not cover:

Collapsible structures with hinged parts

Special rules of classification

Use E04B 2001/34389 for classifying additional information of documents showing a set of building elements forming a self-contained package for transport before assembly.

E04B 1/34363
{with provisions to raise or lower the whole structure}

Definition statement

This place covers:

Structures with means for raising and lowering them above ground level;

Structures with means for retracting them into the ground and returning them to ground level.

Special rules of classification

Half-arches wheeled at one extremity against a building wall and at the other end on the ground are also classified here.
E04B 1/344

with hinged parts

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Collapsible caravans | B60P 3/34 |

Special rules of classification

Use E04B 1/34336 for classifying additional information of documents showing mobile homes.

Do not use E04B 1/34321 to classify the documents of E04B 1/344.

E04B 1/3441

{with articulated bar-shaped elements}

Special rules of classification

Collapsible articulated space frames are classified here.

E04B 1/3445

{foldable in a flat stack of parallel panels}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Collapsible large containers | B65D 88/52 |

Special rules of classification

Do not use E04B 2001/34389 to classify the documents of E04B 1/3445 and E04B 1/3447.

E04B 1/3448

{with rotating shell-forming segments}

Definition statement

This place covers:

Structures with rotating shell-forming segments, e.g. armadillo plates type structure.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Roof structures with movable sections | E04B 7/16 |
| Swimming pools with movable roof sections | E04H 3/165 |
E04B 1/346
Rotary buildings; Buildings with rotary units, e.g. rooms

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

| Carousels for milking stations   | A01K 1/126 |
| Turntable for vehicles          | B60S 13/02 |

Special rules of classification
Do not use E04B 2001/0061 to classify the documents of E04B 1/346.

E04B 1/348
Structures composed of units comprising at least considerable parts of two sides of a room, e.g. box-like or cell-like units closed or in skeleton form

Definition statement
This place covers:
Structures composed of units comprising at least considerable parts of two sides of a room, e.g. box-like or cell-like units closed or in skeleton form, i.e. only the edges of the boxes or cells are materialized (only frame, no infill panels)

Special rules of classification
In E04B 1/348 - E04B 1/34861 use E04B 2001/34876 - E04B 2001/34892 for classifying additional information of documents showing sloping or barrel roof, or means allowing access to the structures.

E04B 1/34807
{Elements integrated in a skeleton}

Definition statement
This place covers:
Box-like units resting on shelves or beams of a supporting structure;
Stacked cells with concrete poured between the cells.

E04B 1/34823
{the supporting structure consisting of concrete}

Definition statement
This place covers:
Structures with the main vertical structural parts consisting of concrete.
E04B 1/3483
{the supporting structure consisting of metal}

Definition statement
This place covers:
Structures with the main vertical structural parts consisting of metal.

E04B 1/34838
{the supporting structure consisting of wood}

Definition statement
This place covers:
Structures with the main vertical structural parts consisting of wood.

E04B 1/34846
{the supporting structure consisting of other specified material, e.g. of plastics}

Definition statement
This place covers:
Structures with the main vertical structural parts consisting of specified material other than concrete, metal, wood.

E04B 1/34853
{the supporting structure being composed of two or more materials}

Definition statement
This place covers:
Structures with the main vertical structural parts consisting of the combination of two or more specified structural materials.

E04B 1/34869
{Elements for special technical purposes, e.g. with a sanitary equipment (combination of baths, douches, sinks, wash-basins, closets or urinals A47K 4/00; plumbing installations for baths, douches, or the like, E03C 1/01; panels serving for locating conduits E04C 2/521; ducts for receiving installation lines E04F 17/08)}

Definition statement
This place covers:
Structures composed of units comprising at least considerable parts of two sides of a room where the units are pre-fitted for special technical purposes, e.g. with pre-fitted piping, plumbing, sanitary equipment or electrical wiring.

E04B 2/00

Walls, e.g. partitions, for buildings; Wall construction with regard to insulation; Connections specially adapted to walls (connections for building structures in general E04B 1/38; insulation for buildings in general E04B 1/62; building elements of relatively thin form for parts of buildings E04C 2/00)

Definition statement

This place covers:
Load-bearing and non-load-bearing walls for buildings, wall construction with regard to insulation, and connections specially adapted to walls for buildings.

References

Limiting references

This place does not cover:

| Connections for building structures in general | E04B 1/38 |
| Insulation for buildings in general | E04B 1/74 |
| Retaining walls | E02D 29/02 |
| Building panels | E04C 2/00 |

Special rules of classification

Load-bearing walls made from panels are classified in E04B 1/02 - E04B 1/14.

Load-bearing or non-load-bearing walls built-up from layers of building elements, e.g. brick or block walls, are classified in E04B 2/02 - E04B 2/54.

Load-bearing walls having a framework or a pillarwork, and walls incorporating load-bearing elongated members, are classified in E04B 2/56 - E04B 2/709.
Non-load-bearing walls made of panels or posts and panels are classified in E04B 2/72 - E04B 2/828.

Load-bearing or non-load-bearing walls made by casting, pouring or tamping in situ are classified in E04B 2/84 - E04B 2/8664.

E04B 2/02

built-up from layers of building elements

Definition statement

This place covers:

Walls for buildings built-up from layers of building elements, e.g. brick or block walls, as well as building elements of block or brick shape for the construction of parts of buildings. The walls can be bearing walls or non-bearing walls, e.g. partition walls, and the building elements accordingly.

Informative references

Attention is drawn to the following places, which may be of interest for search:

Masonry wall ties, i.e. anchors E04B 1/4178
Details of connections of block or brick shaped building elements E04B 2002/0202
Details of connections E04B 2002/0202
Special features of block or brick shaped building elements E04B 2002/0256
Retaining walls E02D 29/02

Special rules of classification

Building elements of block or brick shape, for the construction of parts of buildings, are classified in E04B 2/02 - E04B 2/54, even if they do not explicitly form part of a wall.

Building elements of block or brick shape, for the construction of parts of buildings, and characterised by special adaptations, e.g. serving for locating conduits, for forming soffits, cornices or shelves, for fixing wall-plates or door-frames, for claustra, are classified in E04C 1/39 - E04C 1/397.

Building elements of block or brick shape, for the construction of parts of buildings, and being built-up from parts of different materials are classified in E04C 1/40 - E04C 1/41.

Building elements of glass or other transparent material, for the construction of parts of buildings, are classified in E04C 1/42.

All aspects of the block or brick shaped building elements, e.g. special features, and details of connections among themselves, should be classified in E04B 2/02 - E04B 2002/0297.

Walls having neither cavities between, nor in, the solid elements

**Definition statement**

This place covers:

Walls having neither cavities between, nor in, the solid building elements, as well as solid brick or block shape building elements having no cavities in them.

**E04B 2/10**

by filling material with or without reinforcements in small channels in, or in grooves between, the elements

**Definition statement**

This place covers:

Walls built-up from layers of solid building elements of brick or block shape, and having no cavities in the elements, wherein the joints, e.g. small channels or grooves between the building elements and/or between the successive layers are filled with material, with or without additional reinforcements in the joints, small channels or grooves.

**E04B 2/701**

{with integrated supporting and obturation function}

**Definition statement**

This place covers:

Walls made from horizontally laid logs or beams, e.g. log cabins.
E04B 2/702

{with longitudinal horizontal elements (E04B 2/704, E04B 2/705 take precedence)}

References

Limiting references

This place does not cover:

| Walls incorporating load-bearing elongated members of wood, with longitudinal horizontal elements shorter than the length of a wall | E04B 2/704 |
| Walls incorporating load-bearing elongated members of wood, with longitudinal horizontal elements placed between columns | E04B 2/705 |

E04B 2/706

{with supporting function}

Definition statement

This place covers:

Walls comprising structural wooden studs or posts with non structural closure elements en-between, e.g. structural stud walls and shear bracing therefor.

References

Limiting references

This place does not cover:

| Half-timbering | E04B 2/562 |

E04B 2/72

{Non-load-bearing} walls of elements of relatively thin form {with respect to the thickness of the wall} (E04B 2/56, E04B 2/74, E04B 2/88 take precedence; with joint fillings acting as framework or pillars E04B 2/68; elements E04C 2/00)

Definition statement

This place covers:

Non-load-bearing thin walls without studs or posts, with profiled or folded panels or trays.

References

Limiting references

This place does not cover:

| Load-bearing walls of framework or pillarwork; Walls incorporating load-bearing elongated members | E04B 2/56 |
| Non-load-bearing walls of elements of relatively thin form with joint fillings acting as framework or pillars | E04B 2/68 |
| Removable non-load-bearing partitions; Partitions with a free upper edge | E04B 2/74 |
Non-structural stud walls
Curtain walls
Building elements of relatively thin form for the construction of parts of buildings, e.g. sheet materials, slabs, or panels

Special rules of classification

E04B 2/723
{constituted of gypsum elements}

Definition statement
This place covers:
Non-load-bearing thin walls with folded plasterboard or gypsum or plaster projected onto a lattice.

Special rules of classification
Use E04B 2/845 as additional information for the documents of E04B 2/723.

E04B 2/74
Removable non-load-bearing partitions; Partitions with a free upper edge (framed panels E04C 2/38) (modular coordination)

References

</table>
Special rules of classification
Documents where the filling does not contain a hardenable binder, e.g. rammed earth or loose rocks, are classified in E04B 2/84.

E04B 2/86
made in permanent forms

Special rules of classification

Glossary of terms
In this place, the following terms or expressions are used with the meaning indicated:
A "tie" holds the two opposite leaves of the form together.
A "spacer" keeps the two opposite leaves at a predetermined distance from each other.
A single element can but must not have both functions: i.e. a tie can be a spacer or not, a spacer can be a tie or not.

E04B 2/8635
{with ties attached to the inner faces of the forms (E04B 2/8611 and E04B 2/8623 take precedence)}

References
Limiting references
This place does not cover:

| Walls made by casting, pouring, or tamping in situ in permanent forms with spacers being embedded in at least one form leaf | E04B 2/8611 |
| Walls made by casting, pouring, or tamping in situ in permanent forms with spacers and at least one form leaf being monolithic | E04B 2/8623 |

E04B 2/8641
{using dovetail-type connections}

Definition statement
This place covers:
Connections with dovetail or "T"-shaped grooves in the inner face of the form or the spacer

E04B 2/8647
{with ties going through the forms}

Definition statement
This place covers:
Ties going through the form, e.g. nails or screws going through the forms into the spacers.
E04B 2/88
Curtain walls {(fixing of glass panes E06B 3/54)}

References
Limiting references
This place does not cover:

| Fixing of glass panes | E06B 3/54 |

Informative references
Attention is drawn to the following places, which may be of interest for search:

| Measures for draining-off condensed water or water leaking in windows | E06B 7/14 |

Special rules of classification
Curtain walls in combination with ventilation, heating, drainage, shading, adjustable supports are classified in E04B 2/88;

Drainage details should additionally be classified in E06B 7/14.

E04B 2/885
{comprising a supporting structure for flush mounted glazing panels}

References
Limiting references
This place does not cover:

| Connectors for fixing the flush mounted glazing to the supporting structure | E06B 3/54 |

E04B 2/90
comprising panels directly attached to the structure {(E04B 2/885 takes precedence)}

Definition statement
This place covers:
Panels directly attached to the structure, the panel comprising a frame or not

References
Limiting references
This place does not cover:

| Curtain walls comprising a supporting structure for flush mounted glazing panels | E04B 2/885 |
E04B 2/94

Limiting references
This place does not cover:

| Curtain walls with sandwich-type panels | E04B 2/92 |

E04B 2/96
comprising panels attached to the structure through mullions or transoms
{(E04B 2/885 takes precedence)}

Definition statement
This place covers:
Panels attached with panel clamping bars to the mullions or the transoms.

References
Limiting references
This place does not cover:

| Curtain walls comprising a supporting structure for flush mounted glazing panels | E04B 2/885 |
| Glass roofs | E04D 3/06 |
| Flush mounted glazing, the panels being attached without clamping bars to mullions or transoms | E06B 3/54 |

E04B 2/965
{Connections of mullions and transoms}

Special rules of classification
Documents with details of connections of mullions to mullions, with details of connections of mullions or transoms to the supporting structure, or with details of the infill panels are classified in E04B 2/96, even if they show details of the connections of mullions and transoms.

Documents with details of angles or corners of the curtain walls are classified in E04B 2/962, even if they show details of the connections of mullions and transoms.

E04B 2/967
{Details of the cross-section of the mullions or transoms (E04B 2/965 takes precedence)}

Special rules of classification
Are classified in E04B 2/967 documents which show only details of the cross-section of the mullions or transoms.
Documents with details of connections of mullions to mullions, of connections mullions or transoms, or with details of the infill panels, or with details of angles or corners of the curtain walls are classified in E04B 2/96, E04B 2/962 or E04B 2/965, even if they show details of the cross-section of the mullions or transoms.

E04B 5/00
Floors; Floor construction with regard to insulation; Connections specially adapted therefor (elements for floors, e.g. bricks, stones, filling bodies, girders, E04C; flooring as finishing work, insulation of flooring, sectional false floors, e.g. for computers E04F 15/00)

Definition statement
This place covers:
Structural floors for buildings; Building floors construction in general and with regard to insulation; Connections specially adapted to floors.

| Load-carrying floor structures partly cast in situ with prefabricated or partly prefabricated beams and one or more hollow cores between the beams | E04B 5/265 |

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

| Hollow core slab | Hollow core slab is a precast slab of prestressed concrete, having tubular voids extending the full length of the slab |

E04B 5/046

{with beams placed with distance from another}

Definition statement

This place covers:

Load-carrying floor structures formed of prefabricated beams placed with distance from one another, the space between the beams being filled or covered by prefabricated elements and eventually completed by non-structural layers of concrete or mortar..

References

Limiting references

This place does not cover:

| Load carrying floor structures formed substantially of prefabricated units, and assembled of block shaped elements | E04B 5/08 |

**E04B 5/21**

Cross-ribbed floors

**Definition statement**

*This place covers:*

Floor structures partly formed in situ, with prefabricated filling members and with stiffening ribs wholly cast between or in the prefabricated filling members, and extending in two different and intersecting directions. Prefabricated filling elements suitable for casting cross-ribbed floors.
E04B 5/23

with stiffening ribs or other beam-like formations wholly or partly prefabricated
(with all load-carrying parts substantially consisting of prefabricated units
E04B 5/02 {; beams built-up by elements joined in line E04C 3/22})

Definition statement

This place covers:

Floor structures partly formed in situ, with prefabricated or partly prefabricated beam-like formations,
e.g. prefabricated beams of concrete, metal or wood.

**Special rules of classification**

Floor structures cast in situ with hollow cylindrical or spherical filling elements are classified in E04B 5/32.

Floor structures cast in situ with a metal form-slab are classified in E04B 5/40.
E04B 5/36

with form units as part of the floor

Definition statement
This place covers:
Floor structures wholly cast in situ with form units as part of the floor, the form units being either made in one piece or made of different elements, e.g. non-self-supporting form units.

References
Limiting references
This place does not cover:

Sectional false floors  E04F 15/024

Special rules of classification
Non-self-supporting floor form units, either made of one element or of a series of elements, are classified in E04B 5/36, except in case of metal form-slabs.

Glossary of terms
In this place, the following terms or expressions are used with the meaning indicated:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Floor form unit</td>
<td>A form, either made of one element or of a series of elements, that allows the floor to be cast over it, in situ, without the need of additional forms.</td>
</tr>
</tbody>
</table>

E04B 5/38

with slab-shaped form units acting simultaneously as reinforcement; Form slabs with reinforcements extending laterally outside the element {{beams placed against one another and acting as permanent forms E04B 5/23}}

Definition statement
This place covers:
Floor structures wholly cast in situ with slab-shaped substantially self-supporting form units acting simultaneously as reinforcement;

Form slabs with reinforcements of metal or other material extending laterally outside the form slab, and that are suitable to be embedded in the concrete of the floor slab to be cast in-situ, e.g. "Predalles" concrete slabs or semi-finished reinforced concrete slabs.

E04B 5/40

with metal form-slabs

Definition statement
This place covers:
Floor structures wholly cast in situ with metal form-slabs, e.g. with corrugated or non-corrugated metal form-slabs.
**E04B 5/43**

Floor structures of extraordinary design; Features relating to the elastic stability; Floor structures specially designed for resting on columns only, e.g. mushroom floors ((anchoring devices for balconies with means for preventing cold bridging E04B 1/0038); extraordinary constructions in general E04B 1/34)

Special rules of classification

Barrel vaulted roofs are classified in E04C 3/08. Folded barrel vaulted roofs are classified in E04B 7/107.

E04B 7/10

Shell structures, e.g. of hyperbolic-parabolic shape; Grid-like formations acting as shell structures; Folded structures {(buildings E04B 1/32)}

Definition statement

This place covers:

Curved roof structures made by shell structures, e.g. roof structures of hyperbolic-parabolic shape made of a thin-shell concrete membrane, or by a plurality of thin-shell units connected together;

Curved roof structures made by grid-like formations acting as shell structures, i.e. thin and substantially self-supporting, that is without the need of intermediate supports;

Curved roof structures made by a folded structure, e.g. globally curved roof structures made by concertina-like folded metal sheets.

Ceilings; Construction of ceilings, e.g. false ceilings; Ceiling construction with regard to insulation (ceilings used as forms for making floors E04B 5/00; coverings or linings for ceilings E04F 13/00)

Definition statement

This place covers:

- Ceilings, i.e. suspended ceilings and false ceilings;
- Construction of suspended and false ceilings;
- Suspended and false ceiling construction with regard to insulation.

References

Limiting references

This place does not cover:

| Ceilings used as forms for making floors | E04B 5/00 |
| Coverings or linings for ceilings, directly attached to the lower face of the floor slab | E04F 13/00 |
| Plastering, finishing work | E04F 21/00 |

Special rules of classification

This subclass comprises only suspended ceilings and false ceilings. Ceiling consisting of ceiling panels, coverings or linings attached directly to the lower face of the floor slab are only classified in E04F 13/00.

Ceiling consisting of ceiling panels, coverings or linings indirectly attached to the lower face of the floor slab in a way similar to wall covering panels, e.g. with only one lath in-between wall and panel, are also only classified in E04F 13/00.
**E04B 9/001**

{characterised by provisions for heat or sound insulation}

**Definition statement**

*This place covers:*

Suspended ceilings or false ceilings having provisions for heat or sound insulation.

E04B 9/006
{with means for hanging lighting fixtures or other appliances to the framework of the ceiling}

Definition statement

This place covers:
Suspended or false ceilings with means for hanging lighting fixtures or other appliances to the framework of the suspended or false ceiling, e.g. to the T-bars of a suspended ceiling.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Means for suspending the supporting construction of the suspended ceilings from the floor slab; adjustable | E04B 9/18, E04B 9/20 |
| Supports for pipes | F16L 3/00 |
| Supporting, suspending or attaching arrangements for lighting devices | F21V 21/00 |
| Suspension of electric conduit channels | H02G 3/263 |

Special rules of classification

Hanging means directly attached to the lower face of the floor slab are not classified here.

Translucent ceilings, i.e. permitting both the transmission and diffusion of light are classified in E04B 9/32.

E04B 9/008
{with means for connecting partition walls or panels to the ceilings}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Partition walls; removable partition walls | E04B 2/72, E04B 2/74 |
E04B 9/02
having means for ventilation or vapour discharge

Definition statement
This place covers:
Suspended or false ceilings having means for ventilation or vapour discharge.

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

<table>
<thead>
<tr>
<th>Description</th>
<th>CPC Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Suspended or false ceilings having means for ventilation or vapour discharge, the supporting ceiling grid acting as air diffuser</td>
<td>E04B 2009/026</td>
</tr>
<tr>
<td>Ventilation, air conditioning systems; Air-humidification systems</td>
<td>F24F, F24F 6/00</td>
</tr>
<tr>
<td>Clean-rooms</td>
<td>F24F 3/161</td>
</tr>
</tbody>
</table>

Special rules of classification
Classify in E04B 9/02 only if the ceiling components themselves, e.g. the ceiling panels or the framework of the ceiling, have something special in relation to ventilation or vapour discharge.

A general ceiling having only openings for ventilation ducts and no other specific ventilation feature, should not be classified in E04B 9/02. Conversely, a clean room ceiling having openings for ventilation ducts, the rest of the ceiling being air-tight, should be classified in E04B 9/02, the air-tightness of the ceiling being a specific feature of the ceiling linked to the ventilation of the clean room.

E04B 9/04
comprising slabs, {panels,} sheets or the like

Definition statement
This place covers:
Suspended or false ceilings comprising slabs, sheets or the like, e.g. suspended ceiling comprising inverted tee-bars and panels.
