E21C

MINING OR QUARRYING

Definition statement

This place covers:
Methods or apparatus specific to mining or quarrying.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Drill bits, bore reamers, core taking devices, drilling pipes or rods, handling, racking or connecting arrangements for drilling pipes or rods, counterboring or enlarging drilled holes, flame drilling, or other drilling apparatus, even though they may be disclosed only for mining or quarrying | E21B |

E21C 25/00

Cutting machines, i.e. for making slits approximately parallel or perpendicular to the seam (dislodging machines with slitting means E21C 27/02, E21C 27/10, E21C 27/18)

Definition statement

This place covers:
Machines having cutting means for making a slit or a plurality of slits in the seam, so that the material in the seam can be removed in a subsequent step. Illustrative example:

References

Limiting references

This place does not cover:

| Dislodging machines with slitting means | E21C 27/02, E21C 27/10, E21C 27/18 |

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Guiding the machine | E21C 35/08 |
E21C 27/00
Machines which completely free the mineral from the seam

Definition statement
This place covers:
Machines that can break the mineral by any means that dislodge it completely from the seam.

References
Informative references

| Guiding the machine | E21C 35/08 |

Glossary of terms
In this place, the following terms or expressions are used with the meaning indicated:

| Planer | A fixed-blade device for continuous longwall mining of narrow seams of friable coal; the machine is operated along the coal face, planing a narrow cut from the solid coal as it travels. |

E21C 27/02
solely by slitting (rods, drums, for same E21C 25/10; saws, discs, wheels E21C 25/18; chains, chain guides, for same E21C 25/28)

Definition statement
This place covers:
Machines which completely free the mineral from the seam solely by slitting; Shearer loaders. While E21C 25/00 is only for slitting, with the material remaining in place and needing to be removed by other means, in E21C 27/02 the material is slit and removed in one go. The machines of this group have e.g. drums with spiral-shaped cutters for slitting and extracting the cut material. Illustrative example:
E21C 27/24

by milling means acting on the full working face, i.e. the rotary axis of the tool carrier being substantially parallel to the working face (similar machines for tunneling E21D 9/1026)

Definition statement

*This place covers:*

Mineral freed by milling means acting on the full working face not involving slitting; Continuous miners. Illustrative example:

![Image of a continuous miner](image1)

E21C 27/34

Machine propelled along the working face by cable or chain

Definition statement

*This place covers:*

Machine propelled along the working face by cable or chain; Coal ploughs. Illustrative example:

![Image of a coal plough](image2)
E21C 29/00
Propulsion of machines for slitting or completely freeing the mineral from the seam

Definition statement
This place covers:
Propulsion of machines for slitting or completely freeing the mineral from the seam; Propulsion of machines along the seam. Illustrative example:

Propulsion of machines into the seam, as in highwall mining. Illustrative example:

E21C 31/00
Driving means incorporated in machines for slitting or completely freeing the mineral from the seam

Definition statement
This place covers:
Drive units for energising any of the parts forming the machine. Illustrative example:
E21C 33/00
Trucks or other devices for transporting machines for slitting or completely freeing the mineral from the seam

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

| Equipment transport systems adapted to underground conditions | E21F 13/006 |

E21C 35/00
Miscellaneous items relating to machines for slitting or completely freeing the mineral from the seam

Definition statement
This place covers:
Specific details of mining machines not disclosed in E21C 25/00 - E21C 33/00.

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

| Picks for tearing up asphalt | E01C 23/12 |

Special rules of classification
Means for placing or orienting the machine are classified in E21D 35/08 and subgroups. Inventions relative to obtaining information about the position or the status of the machine and processing that information to control the machine are classified in E21C 35/24. If the positioning is done in combination with operation of a shield for step-by-step movement, then this aspect is classified in E21D 23/00.

E21C 37/00
Other methods or devices for dislodging with or without loading (breaking-down by means inserted in slits E21C 27/14)

Definition statement
This place covers:
Techniques for dislodging minerals for mining applications.

References
Limiting references
This place does not cover:

| Breaking-down by means inserted in slits | E21C 27/14 |

**E21C 45/00**

Methods of hydraulic mining; Hydraulic monitors *(E21C 25/60 takes precedence)*

**Definition statement**

*This place covers:*

Methods of hydraulic mining; Hydraulic monitors; Excavating alluvial or other mineral deposits by means of high-pressure water jets. Illustrative example:

![Image of hydraulic mining equipment]

| Mining methods for obtaining peat | E21C 49/00 |
E21C 49/00

Obtaining peat; Machines therefor (treating peat C10F)

Definition statement

This place covers:
Methods and machinery for draining and preparing the peat deposit before exploitation, as well as for the extraction of peat.

References

Limiting references

This place does not cover:

| Treating peat | C10F |

E21C 50/00

Obtaining minerals from underwater, not otherwise provided for (suction dredgers or component parts thereof E02F 3/88; equipment for conveying or separating excavated material E02F 7/00; dippers G01N 1/12)

Definition statement

This place covers:
Methods and machinery for obtaining minerals from sea bodies, such as ocean floors, or lake or river beds.
References
