

## G08B

### SIGNALLING OR CALLING SYSTEMS; ORDER TELEGRAPHS; ALARM SYSTEMS

#### Definition statement

*This place covers:*

Visual, audible, tactile signalling systems (or combinations thereof) and arrangements of signalling in devices if not provided for elsewhere.

Burglar, theft or intruder alarms. Identifying, scaring or incapacitating burglars, thieves or intruders.

Fire alarms; Alarms responsive to explosion.

Alarms responsive to unspecified undesired or abnormal operating condition if not provided for elsewhere.

Alarm systems in which the location of the alarm condition is signalled to a central station, either spontaneously or upon interrogation from the central station.

Alarm systems in which the alarm condition is signalled from a central station to a plurality of substations.

Checking or monitoring of signalling or alarm systems; Prevention or correction of operating errors, e.g. preventing unauthorised operation; Predictive alarm systems characterised by extrapolation or other computation using updated historic data.

#### Relationships with other classification places

The mere provision of an audible or visible signalling device on a measuring or switching apparatus;

Alarm systems for indicating that a specific variable has reached a predetermined value are classified in subclasses of [G01](#) specifying the particular variable concerned;

Alarms relating to specific processes or types of machines or apparatus are covered by the relevant subclasses for the processes, machines, or apparatus.

[G08B](#) is principally defined in terms of fields of application, rather than fields of technology. For example [G08B 13/00](#) is defined in terms of burglar, theft or intruder alarms but not limited to a particular technology, such as camera systems, tag systems etc. The systems and devices classified in [G08B](#) consequently involve many different technologies and the subclass has a high number of neighbouring technical fields. Neighbouring technical fields are typically either those areas dealing with the sensing devices per se (typically [G01](#)) or other application fields which use the same technologies (usually in [G06](#), [G07](#) or [H04N](#)).

Example 1:

[G08B 13/2402](#) deals with electronic article surveillance using tags attached to valuables. Often these tags are radio frequency identification tags (RFID). However, RFID techniques and devices per se are classified in [G06K](#). Likewise many other specific applications using RFID tags should not be classified in [G08B](#), e.g. entrance control using tags ([G07C](#)), inventory systems using tags ([G06Q](#)).

Example 2:

Theft detection using cameras belongs to [G08B](#). Close-circuit television (CCTV) systems per se are classified in the video fields ([H04N 7/00](#)). Other systems employ similar camera systems, but for a different purpose. E.g. entrance systems using cameras ([G07C](#)), traffic control using cameras ([G08G](#)).

The mere mentioning of surveillance in a video system does not qualify the document for classification in [G08B](#). In [G08B](#) the object of surveillance is always to detect theft or intrusion.

## G08B 1/00

**Systems for signalling characterised solely by the form of transmission of the signal**

### Definition statement

*This place covers:*

Signalling systems where the emphasis is put in the transmission or relaying of the signal, not on the way of perceiving the signal.

### Further details of subgroups

#### [G08B 1/08](#)

This subgroup contains diverse alarm systems, where the alarm signalling of a sub-element (e.g. a detector within the system) is transformed to electrical signals from a different medium, e.g. transmission of an electric alarm signal upon detection of an audible alarm signal.

## G08B 3/00

**Audible signalling systems; Audible personal calling systems**

### Definition statement

*This place covers:*

Audible signalling systems. Pager receivers signalling only audibly.

Alarm locks with detonating alarm devices	<a href="#">E05B 45/04</a>

## G08B 5/00

### Visible signalling systems, e.g. personal calling systems, remote indication of seats occupied

#### Definition statement

*This place covers:*

Visible signalling systems. Paging receivers signalling visually.

#### Relationships with other classification places

With a view to understanding the relevance of the term "visually" for the classification of paging receivers, the following information is of importance:

Paging receivers which signal visually are classified in this group. This implies that:

- [G08B](#) hosts the paging receivers, which is not explicit from the main group titles.
- That the paging receivers are classified in two different groups in [G08B](#). If the paging receiver details the way it signals VISUALLY, it is to be classified under [G08B 5/22](#). If the paging receiver presents details as to how it signals AUDIBLY, it shall be classified under [G08B 3/10](#).
- If the paging receiver presents details as to how to signal both audibly and visually, since no appropriate entry exists for paging receivers under [G08B 7/00](#), the document shall be classified in both [G08B 5/00](#) and [G08B 3/00](#) accordingly.
- Paging systems are NOT to be classified in [G08B](#), rather [H04W](#) (formerly also [H04Q](#)).
- All Visual indicators of the types specified in the subgroups of [G08B 7/06](#) (e.g. indication of emergency exits or escape routes) are classified there and not in [G08B 5/00](#), even if they comprise only visual signalling means.

**G08B 6/00****Tactile signalling systems, e.g. personal calling systems****Definition statement***This place covers:*

Tactile (e.g. vibratory) signalling systems.

**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Apparatus for generating mechanical vibrations	<a href="#">B06B 1/045</a>
Indication of time by feeling	<a href="#">G04B 25/02</a>
Motors converting reciprocating into rotary movement or vice-versa	<a href="#">H02K 7/06</a>
Motors with reciprocating, oscillating, or vibrating magnet, armature, or coil system	<a href="#">H02K 33/00</a>
Telephone hand set vibration alarms	<a href="#">H04M 19/047</a>
Deaf-aid sets	<a href="#">H04R 25/00</a>

**Special rules of classification**

Tactile signalling systems with a specific application classified elsewhere (e.g. a vibratory signalling device comprised in a mobile telephone).

## G08B 7/00

**Signalling systems according to more than one of groups [G08B 3/00](#) - [G08B 6/00](#); Personal calling systems according to more than one of groups [G08B 3/00](#) - [G08B 6/00](#)**

### Definition statement

*This place covers:*

Subject matter combining more than one of visual, audible and/or tactile signalling means.

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Walking aids for blind persons	<a href="#">A61H 3/06</a>
Devices for facilitating escape from buildings	<a href="#">A62B 3/00</a>
Combinations of display devices with advertising	<a href="#">G09F</a>
Exit signs (e.g.) on doors	<a href="#">G09F 2013/05</a>
Combinations of display arrangements with audible advertising	<a href="#">G09F 27/00</a>

### Special rules of classification

The following special rules apply:

Signalling systems with a specific application classified elsewhere (e.g. a particular machine comprising a visual and an audible signalling device where the classification related to this machine already contains signalling related entries). [G08B 7/00](#) takes precedence over any group in [G08B 3/00](#), [G08B 5/00](#), [G08B 6/00](#).

#### [G08B 7/06](#)

Although the heading of this group specifies "more than one ... signalling means", systems and devices comprising only one single signalling means are classified in the following subgroups: [G08B 7/064](#), [G08B 7/062](#), [G08B 7/068](#), [G08B 7/066](#) (see also precedence note here above).

## G08B 7/06

**using electric transmission {, e.g. involving audible and visible signalling through the use of sound and light sources}**

---	---------------------------

**G08B 13/00****Burglar, theft or intruder alarms****Definition statement***This place covers:*

Arrangements, devices and systems triggering an alarm in case of intrusion, theft or burglary done by a human.

This group is mainly subdivided according to the technology used to detect the burglary, theft or intrusion. Each subgroup will typically have related fields in the areas where the corresponding sensors and systems per se are classified, and in many technical fields where the same type of detectors might be used.

**Relationships with other classification places**

If the invention lies in a central station control unit of a distributed system or in the way in which alarm signals are transmitted between the central station control unit and satellite detectors of the distributed system, classification is likely to be [G08B 25/00](#), [G08B 26/00](#) or [G08B 27/00](#), rather than [G08B 13/00](#). Similarly, if the invention lies in the checking of or testing for malfunctions of an alarm system, then classification is likely to be in [G08B 29/00](#).

Exceptions to the above are those distributed systems in which the specific theft detection technology is relevant to the invention (e.g. video theft detection systems communicating with a central station and where the problem solved by the invention is particularly related to video).

[G08B 13/00](#) only covers theft, burglary and intrusion alarms, it does not cover other alarms (e.g. personal safety alarms, machine fault warnings [G08B 21/00](#)).

Intrusion here means physical intrusion, not non-authorised (electronic) access to a system, e.g. hacking.

## **G08B 13/12**

**by the breaking or disturbance of stretched cords or wires**

### **Definition statement**

*This place covers:*

This group contains arrangements where an item is protected against theft or intrusion by some type of "fence" which encloses or surrounds the item and whereby the disruption of the fence is detected. Here the term "fence" includes not only a conventional fence, such as one surrounding a building, but also a grid surrounding an electronic circuit in an electronic package.

### **References**

#### **Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Fences	<a href="#">E04H 17/00</a>
Opening or tampering of input/output devices, i.e. mouse, keyboards	<a href="#">G06F 21/83</a>
Opening or tampering of casing of electronic components	<a href="#">G06F 21/86</a>

## **G08B 13/14**

**by lifting or attempted removal of hand-portable articles**

### **Definition statement**

*This place covers:*

This group relates to inventions in which the (attempted) physical removal of an object is detected, rather than the mere approach to an object, as is the case in [G08B 13/12](#). E.g. Whilst cutting a cable in a fence in [G08B 13/12](#) would indicate someone attempting to approach an object, cutting a cable in [G08B 13/1445](#) would indicate that a cable by which an object was tethered has been cut, making the object removable.

Important: Electronic article surveillance (EAS) tags are not classified in [G08B 13/14](#). They are classified in [G08B 13/2402](#) and the subgroups thereof.

### **References**

#### **Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Devices to prevent theft or loss of purses, luggage or hand carried bags	<a href="#">A45C 13/18</a>
Show stands, hangers or shelves with antitheft function.	<a href="#">A47F 5/0861</a>

**G08B 13/1427****{with transmitter-receiver for distance detection}****Definition statement***This place covers:*

This group relates to transmitter receiver alarm systems where part of the system, e.g. the transmitter, is physically associated with an article to be protected. The technology employed is the same as that of transmitter receiver systems according to [G08B 21/0202](#) where a part of the system, e.g. the transmitter, is physically associated with a child to be protected. Transmitter receiver article theft systems must be classified in [G08B 13/1427](#), and additionally in the appropriate subgroups of the personal safety alarms under [G08B 21/0202](#) as additional information.

**G08B 13/1436****{with motion detection}****Definition statement***This place covers:*

The motion of a mechanism attached to a portable object is detected, not the motion of an intruder.

**G08B 13/1445**

**{with detection of interference with a cable tethering an article, e.g. alarm activated by detecting detachment of article, breaking or stretching of cable (furniture, e.g. shelves for displaying merchandise, incorporating tethers to prevent theft [A47F 7/024](#), [A47F 5/0861](#))}**

**G08B 13/196****using television cameras****Definition statement**

*This place covers:*

Theft or intrusion detection using video cameras.

Many details are contemplated by the classification scheme, and they should be allocated as completely as possible. They are grouped within the following structure:

- Movement detection and image analysis;
- Camera casing;
- Details of the system layout;
- Electrical details;
- Camera communication details;
- Data storage details;
- User interface details.

**Relationships with other classification places**

Personal safety, industrial process control, traffic surveillance, entry-exit systems, tele-presence or video conferencing systems are not classified in [G08B](#) (see the neighbouring fields of main group [G08B 13/00](#)).

## G08B 13/2402

{Electronic Article Surveillance [EAS], i.e. systems using tags for detecting removal of a tagged item from a secure area, e.g. tags for detecting shoplifting (mechanical aspects of the tags, e.g. related to locking [E05B 73/0017](#); RFID readers [G06K 7/00](#); RFID tags [G06K 19/00](#); access control systems [G07C 9/00](#); anti-theft control in point of sale systems [G07G 3/003](#); security seals [G09F 3/03](#))}

### Definition statement

*This place covers:*

Electronic Article Surveillance (EAS) tags are classified in [G08B 13/2402](#) and its subgroups.

A tag in accordance with this group is an electromagnetic, non-contact marker detected by an antennae (typically a loop antenna arranged at the entrance of a shop or other building). Systems employed for the detection of theft of portable articles comprising an RF transponder communicating with a central station by a radio link are generally classified in the subgroups of [G08B 13/14](#), even though the transponder may be referred to in the document as a tag.

Systems comprising a transponder and a tag is, at the time of writing in 2011, an active topic (e.g. a tag detected by loop antennae at exit points of a shop but also communicating with the WLAN of a shop via Wi-fi access points). These documents should be classified both in [G08B 13/1427](#) and [G08B 13/2402](#).

The classification scheme hierarchically under [G08B 13/2402](#) is detailed, and the relevant aspects of a document should be rigorously classified. Similar criteria as for [G08B 13/196](#) applies:

In general, a document which discloses generally known subject matter pertaining to one or more of the detailed subgroups of [G08B 13/2402](#), where the invention does not lie in the solution to a problem therein should not be allocated that particular classification. If no subgroup can be appropriately allocated, then the document should be classified in the header [G08B 13/2402](#) as invention information, and the details present in the document should be classified in the corresponding subgroups as additional information.

A document where the invention clearly focuses on the topic of an existing subgroup should be given only this subgroup as invention information, further details being classified as additional information where appropriate.

### Further details of subgroups

The group is structured in four main topics. The header groups for each main topic (discussed in bold here below) should NOT be used for classification, They exist rather for distinguishing the matter classified underneath. These topics are:

- [G08B 13/2405](#)

Classification is according to the tag technology used. Documents in which the specific technology is of relevance to the problem solved should be classified here. It is noted that documents specifically disclosing RFID tags solving problems in the field of theft detection should be classified in [G08B 13/2417](#). RFID tags per se are not classified in [G08B](#). Furthermore, merely mentioning security control or surveillance as possible fields of application for an RFID tag in a document is not sufficient to warrant classifying the document in [G08B](#).

- [G08B 13/2428](#)

The classification defines technical aspects of the tag itself.

- [G08B 13/2451](#)

## Definition statement

The classification defines specific applications of the tag which should only be considered if the system includes theft or intrusion detection (e.g. a system using tags storing check-out information and used for theft detection. Documents disclosing only tags used for check-out should not be classified here.

[G08B 13/2465](#)

The classification defines systems or elements of systems other than the tag e.g. antennae for detecting tags, devices for deactivating tags, or transmission or communication arrangements employed within the system.

**References****Informative references**

{Tag housing and attachment details}

**Definition statement**

This place covers:

Details of tag housing and attachment, includes details of tag-detaching devices.

## G08B 13/2491

{Intrusion detection systems, i.e. where the body of an intruder causes the interference with the electromagnetic field}

### Definition statement

*This place covers:*

- Microwave detectors for detecting intrusion;
- Wi-Fi based intrusion detection.

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Actuation of burglar, theft or intruder alarms by interference of a radiation field	<a href="#">G08B 13/187</a>
---	-----------------------------

### Special rules of classification

If the microwave detector is combined with a further sensing technology, documents are classified in [G08B 13/2494](#).

## G08B 15/00

Identifying, scaring or incapacitating burglars, thieves or intruders, e.g. by explosives

### Definition statement

*This place covers:*

Means or measures to stop thieves, trap them or deter them from their planned activity.

### Relationships with other classification places

Personal portable devices transmitting an alarm signal to a remote security centre should be classified in [G08B 25/016](#), not [G08B 15/004](#).

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Devices to prevent loss of bags, trunks or travelling baskets by producing sound, piercing, gas-discharging or the like	<a href="#">A45C 13/24</a>
Alarm locks	<a href="#">E05B 45/00</a>
Detonating alarm	<a href="#">E05B 45/04</a>
Burglar traps or the like on safes	<a href="#">E05G 5/02</a>
Hand-held or body-worn self-defence devices using repellent gases or chemical	<a href="#">F41H 9/10</a>

## G08B 17/00

### Fire alarms; Alarms responsive to explosion

#### Definition statement

*This place covers:*

The generation of an alarm based on the detection of fire, smoke or particles indicating fire.

#### Relationships with other classification places

Flame detection or analysis to solve the problem of monitoring a controlled combustion process, e.g. in order to optimise burners in a kiln ([F23N](#)). Sensing elements per se, particle detectors air pollution detectors ([G01N](#)). Fire fighting arrangements; e.g. extinguishers, sprinklers, safety doors ([A62C](#)).

#### References

##### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Fire fighting in general	<a href="#">A62C</a>
Fire fighting area fires or forest fires,	<a href="#">A62C 3/02</a>
Automatic fire-extinguishing and alarm devices	<a href="#">A62C 35/00</a> , <a href="#">A62C 37/00</a>

Safety devices on stoves, cooking apparatus	<a href="#">F24C 7/087</a>
Radiation pyrometry	<a href="#">G01J 5/00</a>
Temperature-responsive elements	<a href="#">G01K</a>
Light scattering per se	<a href="#">G01N 21/53</a>
Temperature responsive switches	<a href="#">H01H 37/00</a>

#### Special rules of classification

Where the invention disclosed in a document relates to the structure of a fire alarm system including a central station, without specifying what kind of detectors are used, the document should be classified under [G08B 25/00](#), [G08B 26/00](#), [G08B 27/00](#) or [G08B 29/00](#) as appropriate. In this case, the document should also be classified in the head group [G08B 17/00](#) as additional information, so that the document can be retrieved when searching for fire alarm systems.

Devices generating an alarm upon the detection of a combustible gas (i.e. before an explosion has actually taken place) and thus endangering the safety of persons, are not classified in [G08B 17/00](#) but in [G08B 21/16](#).

##### [G08B 17/10](#)

The classification is used for smoke detectors other than those defined in any of the specific subgroups thereof. E.g. systems comprising aspiration ducts used for the analysis and detection of smoke or other combustion products.

##### [G08B 17/103](#)

The classification is used for photoelectric smoke detectors responsive to the obscuration (reduced transmission) of light in the presence of smoke, the detector having a light detector arranged to receive light from a light source when no smoke is present.

[G08B 17/107](#)

The classification is used exclusively for photoelectric smoke detectors responsive to the scattering of light in the presence of smoke, the detector having a light receiver arranged to receive light from a light source which has been scattered by smoke.

**G08B 17/06**

**Electric actuation of the alarm, e.g. using a thermally-operated switch**

Discharge tubes for measuring pressure of introduced gas, or for detecting presence of gas, in general	<a href="#">H01J 41/02</a>
--	----------------------------

## G08B 17/117

by using a detection device for specific gases, e.g. combustion products, produced by the fire ([G08B 17/103](#), [G08B 17/11](#) take precedence)

### References

#### Limiting references

*This place does not cover:*

Alarms for detecting light-scattering due to smoke	<a href="#">G08B 17/103</a>
Alarms using an ionisation chamber for detecting smoke or gas	<a href="#">G08B 17/11</a>

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Alarms responsive to undesired emission of substances	<a href="#">G08B 21/12</a>
Toxic gas alarms	<a href="#">G08B 21/14</a>
Investigating or analysing gases in general	<a href="#">G01N</a>
Investigating or analysing materials by the use of electric, electro-chemical, or magnetic means	<a href="#">G01N 27/00</a>
Particle spectrometers per se	<a href="#">H01J 49/00</a>

## G08B 17/12

Actuation by presence of radiation or particles, e.g. of infrared radiation or of ions

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Flame detection in burners	<a href="#">F23N 5/00</a>
Alarm or controlling circuits using ionisation chamber, proportional counters or Geiger-Müller tubes also functioning as u-v detectors	<a href="#">G01T 7/125</a>

## G08B 19/00

Alarms responsive to two or more different undesired or abnormal conditions, e.g. burglary and fire, abnormal temperature and abnormal rate of flow

### Definition statement

*This place covers:*

Combinations of the subject matter of [G08B 13/00](#) and [G08B 17/00](#).

### Relationships with other classification places

Weather alarms ([G01W 1/00](#)). Indications of formation of ice on aircraft ([B64D 15/20](#)).

## Special rules of classification

Specific details covered by subgroups of [G08B 13/00](#) or [G08B 17/00](#) should also be classified in those subgroups.

Fire and burglary alarms where the invention lies in [G08B 25/00](#) - [G08B 27/00](#) should not be classified here. [G08B 19/005](#) deals with a detecting unit, not a system, intended both for the detection of fire and intrusion,

Example: a video camera detecting both fire and intrusion whereby, the details of the video camera system relating to intrusion detection should also be classified in the appropriate subgroups of [G08B 13/196](#).

## G08B 19/02

### Alarm responsive to formation or anticipated formation of ice

## References

### Informative references

Attention is drawn to the following places, which may be of interest for search:

Indicating weather conditions	<a href="#">G01W 1/00</a>
-------------------------------	---------------------------

## G08B 21/00

### Alarms responsive to a single specified undesired or abnormal condition and not otherwise provided for

## Definition statement

*This place covers:*

Alarms of various kinds, always exclusively in case they are not provided for elsewhere in the entire classification scheme. This group mainly covers alarms systems responsive to situations compromising the safety of persons. Additionally the group covers some alarms indicating faults in systems or devices and for which the entire classification scheme does not provide a more specific entry. It is important that classification under [G08B 21/00](#) is carried out in accordance with the following rules in order to maintain the usefulness of the group for search purposes.

## References

### Informative references

### Special rules of classification

Alarm systems related to a specific device or system which is found elsewhere in the classification.

An exhaustive list of examples cannot be given here, since so many specific devices, installations or systems have provisions for indicating malfunctions.

The following are not classified here e.g.: Theft, burglary or intrusion alarms ([G08B 13/00](#)), battery charge indicators ([H01M 10/00](#), [H02J 7/00](#)), over-voltage indicators ([G01R 19/00](#)), an alarm for a crane ([B66C 23/90](#)), an indicator of a fault on a fridge ([F25D 29/008](#)), or an alarm on a gas pipe ([F17D 3/01](#)).

#### [G08B 21/02](#)

Personal safety alarm systems not covered by the definition of [G08B 21/0202](#) are classified here. e.g. fireman in-field safety alarm. Stopping a machine on safety grounds is not here ([F16P 3/14](#), Industrial safety). Personal alarm systems (panic button) also not classified here ([G08B 25/016](#))

#### [G08B 21/0202](#)

This subgroup contains transmitter-receiver alarm systems e.g. where a parent carries a transceiver for monitoring a child carrying another transceiver. This subgroup uses the same technology as that of [G08B 13/1427](#). If the invention relates to a specific subgroup of [G08B 21/0202](#), the document should be classified in that specific subgroup as invention information. Otherwise the class [G08B 21/0202](#) should be allocated as invention information. In both cases, the details disclosed in the document should, where possible, be classified also as additional information in the appropriate subgroups.

Details of documents classified in [G08B 13/1427](#) should be classified also as additional information in the appropriate subgroups of [G08B 21/0202](#).

#### [G08B 21/04](#)

Surveillance of elderly or infirm people. [G08B 21/0407](#), the (sensor) means used for detecting an emergency and [G08B 21/0438](#), the criteria for judging an emergency, constitute header groups defining the two main topics covered by this group. These should not be used for classification. Documents disclosing details of both topics should be classified under both topics.

[G08B 21/04](#) itself is only to be used if the invention does not correspond to subject-matter covered by a subgroups.

#### [G08B 21/06](#)

There is considerable overlap of documents classified in [G08B 21/06](#) and those classified in [B60K 28/066](#) and [A61B 5/18](#). A complete search should therefore include all three groups.

#### [G08B 21/18](#) - [G08B 21/20](#)

The literal wording of the definitions of these groups is so general that it could apply to almost any technology. In order for these groups to be useful for search, and to avoid losing access to documents elsewhere, a document should only be classified in these groups if in the entire classification scheme a more appropriate classification entry cannot be found at all.

#### [G08B 21/22](#)

Where security or safety is compromised in dependence of the presence or absence of a person in a given area (e.g. alarm systems responsive to: the absence of a patient from a hospital bed; the absence of a parolee under house arrest from their house; the presence of a in an area in which they are not authorized to be). Documents detecting presence or absence of persons for specific applications elsewhere provided for are not to be classified here, for example detecting presence of a child in a hot car ([B60N 2/266](#)).

### Reminder alarms, e.g. anti-loss alarms

## References

### Informative references

Attention is drawn to the following places, which may be of interest for search:

Burglar, theft or intruder alarms with transmitter-receiver for distance detection	<a href="#">G08B 13/1427</a>
Child monitoring systems using a transmitter-receiver system carried by the parent and the child	<a href="#">G08B 21/0202</a>
Status alarms responsive to presence or absence of persons	<a href="#">G08B 21/22</a>
Devices to prevent loss of bags or the like	<a href="#">A45C 13/24</a>
Arrangements for reminder for taking medicine, e.g. programmed dispensers	<a href="#">A61J 7/04</a>

## G08B 21/245

### {Reminder of hygiene compliance policies, e.g. of washing hands}

## Definition statement

*This place covers:*

Reminder alarms related to hygiene compliance policies including reminders related to hand washing, reminders related to prevent face touching to prevent pathogen transmission or reminders to sneeze into the elbow or hand to prevent pathogen transmission.

## G08B 25/00

### Alarm systems in which the location of the alarm condition is signalled to a central station, e.g. fire or police telegraphic systems

## Definition statement

*This place covers:*

Alarm systems where a central station receives alarm information from satellite detectors or subsystems.

These groups focus on alarm systems as a whole, not merely on the point where an alarm condition is detected.

## Relationships with other classification places

Polled alarm systems ([G08B 26/00](#)). With the exception of groups [G08B 25/001](#) - [G08B 25/009](#) (see special rules for classification below).

## Special rules of classification

Groups [G08B 25/001](#) - [G08B 25/009](#) relate to typical problems solved in the context of distributed alarm systems. They are relevant both to systems where the remote detector sends an alarm signal spontaneously and to systems having detectors which are polled by a central station. Documents classified in [G08B 26/00](#), but which deal with any of the problems contemplated in these groups should additionally be classified in [G08B 25/001](#) - [G08B 25/009](#) as appropriate.

### [G08B 25/001](#)

Procedures for cancelling an initiated alarm routine, e.g. cancelling an alarm routine after initiation due to: a user carrying out a cancelling action within a given time; a user failing to carry out an alarm acknowledgement or confirmation action within a given time.

### [G08B 25/002](#)

Intermediate, pre-alarm state in the system.

### [G08B 25/003](#)

Enrolment procedures for addressable elements of the alarm system.

### [G08B 25/007](#)

Documents where the content or structure of the message exchanged between the central station (control unit) and the detectors is described in detailed or relevant for solving the problem posed.

### [G08B 25/008](#)

Enrolment procedures for addressable elements of the alarm system.

### [G08B 25/009](#)

An intermediate unit is used as a relay or extender of the system for communicating with the central station. Typically, nodes of the system can act both as a detector and as a repeater. The mere provision of an alarm panel that receives information from a detector and sends an alarm signal to a remote central station (e.g. the police) by telephone should not be classified here (rather

on [G08B 25/08](#)), since this is typical of the way any alarm system transmits information using communication lines. [G08B 25/009](#) is rather directed to systems where sub-units transmit to other sub-units, typically using the same transmission medium that will eventually be used for communicating with the central station. (alternative: [G08B 25/009](#) is rather directed to systems where a sub-unit relays an alarm to another sub-unit, and the invention lies in the particular arrangement or way in which this is done.) As most of the documents in this group are wireless systems, this group takes precedence over [G08B 25/10](#), i.e. a document classified here should not also be classified in [G08B 25/10](#).

#### [G08B 25/016](#)

Personal alarm systems. This group differs from [G08B 15/004](#) in that it requires the alarm to be transmitted to a central station, whereas in [G08B 15/00](#) the aim is to deter the attacker by scaring them (e.g. by generating a sound or spraying an irritating gas).

#### [G08B 25/018](#)

These are typically, wired alarm networks where each detector has a characteristic electric element (e.g. a resistor having a particular resistance value which is switched into the circuit when the detector is in an alarm state). The central station typically monitors one or more circuit parameters of the line (e.g. line resistance) to detect an alarm and to identify which detector has triggered the alarm.

#### **using power transmission lines**

#### **References**

##### **Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Systems in general for transmission of information via power distribution lines	<a href="#">H04B 3/54</a>
---	---------------------------

### **G08B 25/08**

**using communication transmission lines** {([G08B 13/19658](#), [G08B 21/0286](#), [G08B 25/016](#) take precedence)}

#### **Definition statement**

*This place covers:*

Systems and methods related to the use of telephone networks, both landline and mobile, for transmitting alerts, alarms or other notifications.

#### **References**

##### **Limiting references**

*This place does not cover:*

Telephone systems used to communicate with a camera, e.g. PSTN, GSM, POTS	<a href="#">G08B 13/19658</a>
Tampering or removal detection of the child unit from child or article	<a href="#">G08B 21/0286</a>
Personal emergency signalling and security systems	<a href="#">G08B 25/016</a>

**Application-oriented references**

*Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:*

Telephonic communication systems specially adapted for combination with alarm systems, e.g. fire, police or burglar alarm systems	<a href="#">H04M 11/04</a>
---	----------------------------

**G08B 25/10**

**using wireless transmission systems {([G08B 25/009](#) takes precedence)}**

**Definition statement**

*This place covers:*

Alarm systems that utilize wireless networks other than mobile telephone networks (e.g. WIFI, Bluetooth, broadband internet or other non-cellular communication systems) to signal a central station or monitoring system.

**References****Limiting references**

*This place does not cover:*

Signalling of the alarm condition to a substation	<a href="#">G08B 25/009</a>
---	-----------------------------

**G08B 26/00**

**Alarm systems in which substations are interrogated in succession by a central station**

**Definition statement**

*This place covers:*

Alarm systems where a central station polls satellite detectors or subsystems.

This group focuses on the alarm system as a whole, not merely on the point where an alarm condition is detected.

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Polling in data switching networks	<a href="#">H04L 12/403</a>
------------------------------------	-----------------------------

**Special rules of classification**

Documents classified in [G08B 26/00](#), disclosing a polling system, but dealing with any of the problems considered in groups [G08B 25/001](#) - [G08B 25/009](#) should also be classified in those groups.

**G08B 27/00**

**Alarm systems in which the alarm condition is signalled from a central station to a plurality of substations**

**Definition statement**

*This place covers:*

Alarms signalled from a central station to a plurality of remote users or subscribers, e.g. on the basis of their being in a particular geographic area for which the alarm is relevant, or on the basis of their belonging to a particular group such as a fire fighting team or parents of a particular school.

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Signaling systems in general	<a href="#">G08C</a>
------------------------------	----------------------

**Special rules of classification**

Alarms where the invention lies in transmission of alarms from a plurality of satellites to a single central station. Transmission related aspects of emergency broadcasting ([H04W](#)).

**G08B 29/00**

**Checking or monitoring of signalling or alarm systems; Prevention or correction of operating errors, e.g. preventing unauthorised operation**

**Definition statement**

*This place covers:*

The continuous testing and supervision of signalling and alarm systems falling under the previous subgroups of the subclass [G08B](#). This testing and supervision is conducted for the purpose of detecting malfunctions as well as (attempted) tampering or sabotage ([G08B 29/02](#)). The periodic testing of said systems, may be manual or automated ([G08B 29/12](#)). Detecting and correcting deviations from correct functioning (e.g. due to age related drift of component characteristics, environment variations, noise or interference) may be achieved by: monitoring temporal variations in signals; evaluating signals per se; and by the provision of other checking measures (e.g. dual detectors, data fusion from two detectors).

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Arrangements for testing electric properties, arrangements for locating electric faults	<a href="#">G01R 31/00</a>
---	----------------------------

**Special rules of classification**

A document disclosing an invention falling under the subgroup [G08B 29/00](#) does not need to be classified elsewhere according to the specific type of alarm system disclosed. In other words [G08B 29/00](#) takes precedence over other subgroups. However, where there are also details disclosed pertaining to the specific alarm system, and which would be of relevance for search, then the document should also be classified in the corresponding subgroup. E.g. a document disclosing an

invention relating to detecting tampering with a smoke detector in a fire alarm system should be classified under [G08B 29/046](#) and need not be further classified under [G08B 17/00](#). However if there are particular details of the smoke detector which could be useful for search, then the document should also be classified under [G08B 17/00](#).

## G08B 31/00

**Predictive alarm systems characterised by extrapolation or other computation using updated historic data**

### Definition statement

*This place covers:*

Alarm systems in which the alarm is triggered as a result of analysing data to warn of a potential threat before a dangerous situation has actually developed, e.g. an alarm system making a video analysis of a crowd of people, the analysis comparing the behaviour of individuals in the crowd against a set of "normal" behaviour parameters (e.g. walking speed, appropriateness of clothing for the weather) in order to decide whether a particular individual poses a potential threat.
