

H05H

PLASMA TECHNIQUE (apparatus or processes specially adapted for producing X-rays [H05G 2/00](#)); PRODUCTION OF ACCELERATED ELECTRICALLY-CHARGED PARTICLES OR OF NEUTRONS; PRODUCTION OR ACCELERATION OF NEUTRAL MOLECULAR OR ATOMIC BEAMS

Definition statement

This place covers:

Systems and methods for handling plasma, i.e.:

Generating plasma;

Confining plasma.

These systems are essentially related to experimental plasma systems used for studying the conditions for a controlled thermonuclear fusion.

Methods for investigating plasma, i.e. for measuring plasma parameters;

Systems and methods for generating local plasma to be used in industrial applications, e.g. plasma torches for cutting, welding, spraying or incinerating;

Systems and methods for generating and/or accelerating neutral particle beams, i.e. atomic or molecular beams, neutron beams;

Targets for producing nuclear reactions under irradiation;

Systems and methods for accelerating charged particle beams, i.e. electrostatic accelerators, linear accelerators, magnetic induction accelerators, magnetic resonance accelerators.

H05H 1/00

Generating plasma; Handling plasma

Definition statement

This place covers:

- Methods for investigating plasma, i.e. for measuring plasma parameters;
- Systems and methods for confining a plasma by electric, magnetic or electromagnetic means;
- Systems and methods for heating and sustaining a plasma, in particular for performing nuclear fusion reactions, at laboratory scale;
- Systems and methods for generating plasma for industrial applications.

Plasma containment vessels with magnetic mirrors	H05H 1/14
--	---------------------------

H05H 1/12

wherein the containment vessel forms a closed or nearly closed loop
{([G21B 1/05](#) takes precedence)}

Definition statement

This place covers:

Laboratory systems in which plasma is confined in closed toroidal or helical loops by externally applied magnetic fields.

Relationships with other classification places

Nuclear fusion reactors (operated as prototypes for industrial energy production) based on closed-loop plasma containment systems are classified in [G21B](#).

References

This place does not cover:

Field Reversed Confinement nuclear reactors	G21B 1/052
Stellarator nuclear reactors	G21B 1/055
Tokamak nuclear reactors	G21B 1/057

H05H 1/14

wherein the containment vessel is straight and has magnetic mirrors

References**Limiting references**

This place does not cover:

Electron mirrors	G21K 1/08
------------------	---------------------------

H05H 1/16

using externally-applied electric and magnetic fields

Definition statement

This place covers:

Laboratory systems in which plasma is generated and confined by application of external magnetic fields and electric fields.

References**Limiting references**

This place does not cover:

Discharge vessels in which objects are exposed to the discharge	H01J 37/32
---	----------------------------

H05H 1/18

wherein the fields oscillate at very high frequency, e.g. in the microwave range
{, e.g. using cyclotron resonance}

Definition statement

This place covers:

Laboratory systems in which plasma is generated and confined by application of external electromagnetic fields at RF or microwave frequency, often operated in condition of electron-cyclotron resonance or ion-cyclotron resonance.

References**Limiting references**

This place does not cover:

Discharge vessels operated at RF or microwave frequency, in which objects are exposed to the discharge	H01J 37/32009
--	-------------------------------

H05H 1/20

Ohmic heating

Definition statement

This place covers:

Laboratory systems in which the plasma is heated by inducing a current through it. The current is induced by an electromagnetic winding linked with the plasma torus, i.e. the plasma acts as the secondary winding of a transformer.

References

Limiting references

This place does not cover:

Nuclear fusion reactors	G21B 1/05
-------------------------	---------------------------

H05H 1/22

for injection heating **{{[G21B 1/15](#) takes precedence}}**

Definition statement

This place covers:

Laboratory systems in which high-energy atoms are injected into the ohmically heated, magnetically confined plasma. The atoms are ionized as they pass through the plasma and are trapped by the magnetic field. The high-energy ions then transfer part of their energy to the plasma particles in repeated collisions, increasing the plasma temperature.

References

Limiting references

This place does not cover:

Nuclear fusion reactors	G21B 1/05
-------------------------	---------------------------

H05H 1/24

Generating plasma {(nuclear fusion reactors [G21B 1/00](#); gas-filled discharge reactors [H01J 37/32](#))}

Definition statement

This place covers:

Arrangements for generating plasma to be used in industrial applications, i.e.

- Plasma torches for cutting, welding, surface treatments or spectrometry;
- Plasma systems, other than torches, for treatment of objects or incineration;
- Devices using a plasma discharge for specific applications, e.g. spark gaps, plasma guns;
- Microplasma systems;
- Plasma acceleration systems;
- Power supply systems for the arrangements covered by this group.

Relationships with other classification places

Thermonuclear plasma generating and confining systems for use in nuclear fusion reactor plants are dealt with in [G21B 1/00](#). Plasma generating and confining systems for laboratory nuclear fusion studies are dealt with in [H05H 1/00](#) - [H05H 1/22](#). [H01J 49/00](#) covers the particle spectrometer or separator tubes. [H05H 1/24](#) covers the plasma generation and therefore includes the torches used to generate a plasma from a gas. In gas spectrometry, a gas is normally turned into plasma and the electromagnetic emission is analysed. The torches used to turn such gas into plasma are generally classified in the lower subgroup [H05H 1/30](#), because they use an electromagnetic field to activate the plasma gas.

H05H 1/2475

{using acoustic pressure discharges}

Definition statement

This place covers:

Arrangements for generating local plasma by application of pressure waves to a gas or liquid-filled medium, i.e. cavitation, sonoluminescence.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Plasma generated by shock-waves	H05H 1/52
---------------------------------	---------------------------

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Cavitation	Collapse of gas bubbles trapped in a liquid medium
Sonoluminescence	Emission of light by compression and collapse of gas bubbles in a liquid medium

H05H 1/26

Plasma torches

Definition statement

This place covers:

Plasma torches, whereby a plasma torch is meant as a device for generating a directed flow of plasma, e.g. used for cutting or welding metals, for localized surface treatment of objects or spectroscopic analysis. In particular, this group covers:

- Torches in which plasma is generated by applied electromagnetic fields, e.g. torches for spectrometry;

Definition statement

- Torches in which plasma is generated by establishment of an arc, e.g. non-transferred arc, transferred arc or both.

Relationships with other classification places

Systems for metal working which include a plasma generating torch are dealt with in [B23K 9/00](#) and [B23K 10/00](#).

Generation of plasma in a gas-filled tube	H01J 37/32

H05H 1/28

Cooling arrangements

Definition statement

This place covers:

Arrangements within a plasma torch for cooling the components of the torch and evacuating the heat produced during the torch service.

H05H 1/30

using applied electromagnetic fields, e.g. high frequency or microwave energy ([H05H 1/28](#) takes precedence)

Definition statement

This place covers:

Torches in which plasma is generated by high-frequency electromagnetic fields (e.g. inductive coils enveloping the torch), in particular used for spectroscopic analysis.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Arrangements for arc stabilization by means of externally applied magnetic fields	H05H 1/40
Mass spectrometry	H01J 49/00

H05H 1/32

using an arc ([H05H 1/28](#) takes precedence)

Definition statement

This place covers:

Torches in which plasma is generated by establishing an arc discharge between two electrodes.

Plasma devices using an arc	H05H 1/48
Discharge tubes with provision for introducing objects or material to be exposed to the discharge	H01J 37/32

H05H 1/47

{using corona discharges}

Definition statement

This place covers:

Plasma systems, other than torches, for treatment of object surfaces, wherein plasma is generated by a corona discharge (i.e. the discharge occurs when the strength of the electric field around the electrode is high enough to form a conductive region, but not high enough to cause electrical breakdown or arcing to the object).

H05H 7/00

Details of devices of the types covered by groups [H05H 9/00](#), [H05H 11/00](#), [H05H 13/00](#)

Definition statement

This place covers:

Constructive arrangements and components of linear accelerators, magnetic induction accelerators and magnetic resonance accelerators (e.g. magnet systems, power supply systems), their auxiliary systems (e.g. beam injection systems, undulators) and irradiation systems using such accelerators.

References

Limiting references

This place does not cover:

Direct voltage accelerators	H05H 5/00
Irradiation of objects	G21K 5/00

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- "LINAC" and "Linear accelerator"
- "CW" and "Continuous wave"

H05H 7/001

{Arrangements for beam delivery or irradiation (irradiation systems per se [G21K 5/00](#))}

Definition statement

This place covers:

Systems for delivering the accelerated beam of particles to the target.

References

Limiting references

This place does not cover:

Radiation diagnosis	A61B 6/00
Gantries for radiation therapy	A61N 5/00
Product irradiation systems	G21K 5/00

H05H 7/02

Circuits or systems for supplying or feeding radio-frequency energy

Definition statement

This place covers:

Systems for supplying microwave or radio-frequency energy to the different components and auxiliaries of the accelerator, e.g. accelerating cavities, electromagnets, particle sources.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Attention is drawn to the following places, which may be of interest for search:

Magnets in general	H01F
--------------------	----------------------

H05H 7/06

Two-beam arrangements; Multi-beam arrangements {storage rings}; Electron rings

Definition statement

This place covers:

Arrangements for storing and accelerating plural particle beams at the same time (e.g. for beam collision purposes) and for beam merging (e.g. funneling).

References

Limiting references

This place does not cover:

Beam collisioners for nuclear fusion	G21B 3/006
--------------------------------------	----------------------------

H05H 7/08

Arrangements for injecting particles into orbits

Definition statement

This place covers:

Systems and methods for forming and injecting particle beams into an accelerator by mechanical, electrostatic or magnetic means (e.g. ion and electron sources, pre-accelerators).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

ECR	Electron Cyclotron Resonance
PIG	Cathodic source of light ions
EBIS	Electron-Beam Ion Source
CSD	Charge State Distribution

H05H 7/10

Arrangements for ejecting particles from orbits

Definition statement

This place covers:

Arrangements for extracting the charged particles from the accelerators, e.g. septa, stripping foils.

References

Limiting references

This place does not cover:

Arrangements for modifying the trajectory of the extracted beam (gantries)	A61K
--	----------------------

H05H 7/12

Arrangements for varying final energy of beam

Definition statement

This place covers:

Systems and methods for varying the energy of the extracted beam, by electromagnetic or mechanical means or by emittance variation (e.g. RF cavities, stripping foils, stochastic cooling).

H05H 7/14

Vacuum chambers ([H05H 5/03](#) takes precedence)

Definition statement

This place covers:

The vacuum chambers, cavities and resonators used in a charged particle accelerator and their auxiliary systems (e.g. vacuum pumps, cryostats).

References

Limiting references

This place does not cover:

Accelerating tubes for direct-voltage accelerators	H05H 5/03
--	---------------------------

H05H 7/18

Cavities; Resonators {(travelling-wave tubes [H01J 23/18](#); hyperfrequency cavities in general [H01P 7/04](#), [H01P 7/06](#))}

References

Limiting references

This place does not cover:

Travelling-wave tubes	H01J 23/18
-----------------------	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Hyper-frequency cavities in general	H01P 7/04 , H01P 7/06
-------------------------------------	---

H05H 7/22

Details of linear accelerators, e.g. drift tubes ([H05H 7/02](#) - [H05H 7/20](#) take precedence)

Definition statement

This place covers:

Specific components and systems of linear accelerators (e.g. drift tubes, arrangements for coupling cavities, arrangements for coupling power to cavities) and of the accelerators covered by [H05H 15/00](#).

References

Limiting references

This place does not cover:

Details of the accelerators covered by H05H 9/00 - H05H 13/10	H05H 7/00
Other details	H05H 7/02 - H05H 7/20

Informative references

Attention is drawn to the following places, which may be of interest for search:

RF supplying systems	H05H 7/02
----------------------	---------------------------

H05H 9/00

Linear accelerators

Definition statement

This place covers:

Hadron linacs, drift-tube linacs, side-coupled cavity linacs, RF quadrupoles, lepton linacs and hybrid linacs.

References

Limiting references

This place does not cover:

DC linear accelerators	H05H 5/00
Gantries for radiotherapy	A61N 5/00

H05H 9/02

Travelling-wave linear accelerators {(travelling-wave tubes [H01J 25/34](#))}

Definition statement

This place covers:

Systems and methods for accelerating electron beams by means of an electromagnetic wave (microwave) travelling in a tube serving as waveguide.

References

Limiting references

This place does not cover:

Travelling-wave tubes	H01J 25/34
-----------------------	----------------------------

H05H 9/04

Standing-wave linear accelerators

Definition statement

This place covers:

Linear accelerators wherein electric fields are set up as standing waves within a resonant cavity, with drift tubes suspended along the central axis.

Linear accelerators for hadron particles, e.g. protons, neutrons and ions.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

HADRON	composite particle subject to strong interaction
LINAC	Linear Accelerator

H05H 9/042

{Drift tube LINACS}

Definition statement

This place covers:

Linear accelerators with drift tubes suspended along the central axis.

H05H 9/047

{Hybrid systems}

Definition statement

This place covers:

Linear accelerators combining the features of [H05H 9/042](#) - [H05H 9/045](#).

H05H 9/048

{Lepton LINACS}

Definition statement

This place covers:

Linear accelerators for lepton particles, e.g. electrons.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

LEPTON	Elementary particle not subject to strong interaction
--------	---

H05H 11/00**Magnetic induction accelerators, e.g. betatrons****Definition statement**

This place covers:

Betatrons.

H05H 13/00**Magnetic resonance accelerators; Cyclotrons {(strophotrons, turbine tubes [H01J 25/62](#))}****Definition statement**

This place covers:

Cyclotrons, synchrotrons, synchrocyclotrons, fixed-field alternating-gradient accelerators and microtrons.

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Strophotrons, turbine tubes	H01J 25/62
-----------------------------	----------------------------

H05H 15/00**Methods or devices for acceleration of charged particles not otherwise provided for {, e.g. wakefield accelerators}****Definition statement**

This place covers:

Systems and methods for accelerating or decelerating charged particles by means other than linear or magnetic resonance accelerators, e.g. laser pulses, resonance converters, magnetic monopole accelerators, dielectric-wall accelerators, inductive amplification of particle energy.
