CPC COOPERATIVE PATENT CLASSIFICATION

F MECHANICAL ENGINEERING; LIGHTING; HEATING; WEAPONS; BLASTING (NOTE omitted)

ENGINES OR PUMPS

F04 POSITIVE - DISPLACEMENT MACHINES FOR LIQUIDS; PUMPS FOR LIQUIDS OR ELASTIC FLUIDS

(NOTE omitted)

F04F PUMPING OF FLUID BY DIRECT CONTACT OF ANOTHER FLUID OR BY USING INERTIA OF FLUID TO BE PUMPED {(evacuating by sorption F04B)}; SIPHONS

{(conveying materials in bulk by flows of gas, liquid of foam B65G 53/00)}

NOTES

- 1. Attention is drawn to the notes preceding class <u>F01</u>.
- 2. Combinations of pumps belonging to this subclass with other pumps are only classified in this subclass if such other pumps are fore pumps of diffusion pumps.

WARNING

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

pumped (using only negative pressure F04F 3/00; jet pumps F04F 5/00; siphons F04F 10/00) 1/02	free falling
fluid medium, e.g. alternating 1/04	s, or
1/04 generated by vaporising and condensing 1/06 . the fluid medium acting on the surface of the liquid to be pumped (F04F 1/02 takes precedence) 1/08 . specially adapted for raising liquids from great depths, e.g. in wells 1/10 . of multiple type, e.g. with two or more units in parallel (F04F 1/08 takes precedence) 1/12 in series 1/14 . adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 . characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . Arrangements of nozzles 1/20 . Arrangements of nozzles	
1/06 . the fluid medium acting on the surface of the liquid to be pumped (F04F 1/02 takes precedence) 1/08 . specially adapted for raising liquids from great depths, e.g. in wells 1/10 . of multiple type, e.g. with two or more units in parallel (F04F 1/08 takes precedence) 1/12 in series 1/14 . adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 . characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for a raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . characterised by means for changing in fluid source 1/20 . the inducing fluid being mercury vap depths, e.g. in wells 1/20 . the inducing fluid being mercury vap depths, e.g. in wells 1/20 . the inducing fluid being oil vapour 1/20 . the inducing fluid being oil vapour 1/20 . the inducing fluid being oil vapour 1/20 . characterised by the input flow of inducin medium being radial or tangential to outp (cyclones B04C) 1/20 . Component parts, details, or accessories in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided for in, or of interest apart from, in provided	
1/10 . specially adapted for raising liquids from great depths, e.g. in wells 1/10 . of multiple type, e.g. with two or more units in parallel (F04F 1/08 takes precedence) 1/12 . in series 1/14 . adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 . characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 . Jet pumps, i.e. devices in which flow is induced by pressure drop caused by velocity of another fluid flow (diffusion pumps F04F 9/00; combination of jet pumps with pumps of other than jet type F04B; use of jet pumps for priming or provining or provining or provining or provining or booking no propositive.	
1/10 . of multiple type, e.g. with two or more units in parallel (F04F 1/08 takes precedence) 1/12 in series 1/14 . adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 . characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 1/20 Pumps using negative pressure acting directly on the liquid to be pumped (siphons F04F 10/00) 1/20 Jet pumps, i.e. devices in which flow is induced by pressure drop caused by velocity of another fluid flow (diffusion pumps F04F 9/00; combination of jet pumps with pumps of other than jet type F04B; use of jet numps for priming or boosting non-positive.	
1/12 in series 1/14 adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 specially adapted for raising liquids from great depths, e.g. in wells 3/00 Pumps using negative pressure acting directly on the liquid to be pumped (siphons F04F 10/00) 5/00 Jet pumps, i.e. devices in which flow is induced by pressure drop caused by velocity of another fluid flow (diffusion pumps F04F 9/00; combination of jet pumps with pumps of other than jet type F04B; use of jet pumps for priming or boosting non-positive.	s, or
1/14 . adapted to pump specific liquids, e.g. corrosive or hot liquids 1/16 . characterised by the fluid medium being suddenly pressurised, e.g. by explosion 1/18 . the fluid medium being mixed with, or generated from the liquid to be pumped 1/20 . specially adapted for raising liquids from great depths, e.g. in wells 3/00 Pumps using negative pressure acting directly on the liquid to be pumped (siphons F04F 10/00) 5/00 Jet pumps, i.e. devices in which flow is induced by pressure drop caused by velocity of another fluid flow (diffusion pumps F04F 9/00; combination of jet pumps with pumps of other than jet type F04B; use of jet pumps for priming or boosting non-positive. 5/28 . Restarting of inducing action 5/30 . with axially-slidable combining non 5/32 . with hinged flap in combining non 5/34 . characterised by means for changing in fluid source 5/36 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by means for changing in fluid source 5/38 . characterised by using specific inducing fluid being mercury vap 5/38 . characterised by using specific inducing fluid being mercury vap 5/38 . characterised by using specific inducing fluid being oil vapour 5/40 . the inducing fluid being oil vapour 5/42 . characterised by the input flow of inducing medium being radial or tangential to outp (cyclones B04C) Component parts, details, or accessories in provided for in, or of interest apart from, in four fluid flow in medium being radial or tangential to outp (cyclones B04C) 5/44 . Arrangements of nozzles
