9/23

- "light source" means a light-generating component intended for installation in a fitting or holder incorporated in a lighting device;
 - "retrofit light source" means a light source comprising substantially the same attachment means as those of incandescent lamps or fluorescent lamps. "Retrofit light sources" are specially adapted for replacing or substituting such lamps.
2. Semiconductor devices *per se*, or assemblies thereof, specially adapted for light emission, e.g. for use in light sources (in the sense of Note (1)) are covered by subclasses [H01S](#) (e.g. [H01S 5/00](#)), [H10H](#) (e.g. [H10H 20/00](#) and [H10H 29/20](#)), and [H10K](#) (e.g. [H10K 50/00](#) and [H10K 59/00](#))
 3. Lighting devices or systems in which light sources are used are covered by subclasses [F21L](#) or [F21S](#).
 4. When classifying in this group, classification is also made in subclass [F21V](#) if detail aspects covered by that subclass are of interest.
- Light sources comprising attachment means
 - . Retrofit light sources for lighting devices with a single fitting for each light source, e.g. for substitution of incandescent lamps with bayonet or threaded fittings
