**A61F**

FILTERS IMPLANTABLE INTO BLOOD VESSELS; PROSTHESES; DEVICES PROVIDING PATENCY TO, OR PREVENTING COLLAPSING OF, TUBULAR STRUCTURES OF THE BODY, e.g. STENTS; ORTHOPAEDIC, NURSING OR CONTRACEPTIVE DEVICES; FOMENTATION; TREATMENT OR PROTECTION OF EYES OR EARS; BANDAGES, DRESSINGS OR ABSORBENT PADS; FIRST-AID KITS (dental prosthetics A61C)

**Definition statement**

*This place covers:*

Apparatus, devices or methods for physically correcting or altering the body of patients or disabled persons that are directly and for prolonged periods of time (i.e. not just during acute exceptional circumstances) used on or in the body of the patient or the disabled person:

- Stents and similar devices providing patency to, or preventing collapsing of, tubular structures of the body;
- Prostheses, i.e. artificial substitutes or replacements for parts of the body that are either implantable into the body (e.g. blood vessels, eye parts, heart valves, bones, joints) or not implantable in the body (e.g. mammary prostheses, artificial arms, hands, legs or feet or parts thereof);
- Specially adapted electrical, bioelectrical or fluid operating or control means for prostheses or sphincters;
- Specially adapted means for connecting prostheses with or to the body (e.g. bandages, harnesses, sockets, stockings for the limb stump);
- Specially adapted means for protecting prostheses;
- Filters implantable into blood vessels;
- Lengthening pieces for natural legs;
- Orthopaedic methods or devices for non-surgical treatment of bones or joints, e.g. splints, casts, corsets, devices for stretching including equipment for beds or treatment tables, medical insertions for shoes, pressure pads, suspensory bandages;
- Methods or devices for physically treating or correcting of the eyes (e.g. eye surgery using laser);
- Apparatus specially adapted for guiding the blind by supplementing or replacing their visual perception;
- Methods or devices for treatment of the ears, e.g. surgical.

Methods or devices (e.g. head or eye-gaze-direction actuated control devices, oral communication actuated control devices) for enabling patients or disabled persons to operate independent apparatus or machines (i.e. apparatus such as room lights or doors that is not a part of, or used in conjunction with the functioning of, artificial or natural parts of their body) without the application of direct force from the part of the human body that would normally be used by individuals for controlling operation of the independent apparatus or machine such as a hand, foot or their artificial equivalents.

Contraceptive devices for males (e.g. condoms, vas deferens occluders) or females (e.g. pessaries, intra-uterine type, fallopian occluders).

Devices for medical or hygienic care of living individuals that are worn by the individual or directly contact the body of the individual during their care:
Devices worn by the patient for reception of urine, faeces; colostomy devices;

Bandages or dressings, e.g. plasters, elastic stockings;

Absorbent pads, e.g. sanitary towels, absorbent garments, e.g. diapers, tampons, e.g. catamenial tampons, surgical swabs; supporting and fastening means for pads.

Heating or cooling devices for medical or therapeutic treatment of the human body and for body cavities, e.g. compresses, warming pads, pans or mats, hot water bottles, ice bags.

Protective devices for the eyes, e.g. goggles, eye-masks worn to prevent particulates or chemicals from striking the eyes.

Devices for inserting contact lenses.

Protective devices for the ears, e.g. ear plugs or earmuffs.

Auxiliary appliances for wound dressings; dispensing containers for dressings or bandages; packages or wrapping arrangements for used pads, e.g. for disposal.

Containers having various emergency medical supplies such as bandages, simple medical tools, and medicines (i.e. first-aid kits) that are intended to be used for administering initial treatment to injured or sick individuals.

**Relationships with other classification places**

If an apparatus, method, device, or material is usable for both humans and animals for the same purpose and in the same manner, and it is otherwise proper for this subclass, classification is made only in subclass A61F. Similar devices or processes to those covered by subclass A61F that are usable exclusively for animals or are used in animals in a different manner or for different purposes than for humans, are classified in subclass A01K or A61D.

Surgical apparatus or processes in general are covered by subclass A61B.

Subclass A61H provides for massage, chiropractic, or physical therapy apparatus or processes used for the treatment of disease, injuries or disability (i.e. an abnormal condition of the body) by utilization of direct mechanical energy.

Chemical and material aspects of prostheses, structures inserted into tubular structures of human bodies, bandages, dressings, absorbent pads or surgical articles are covered by subclass A61L.

With regard to human organs and their parts, the exact distinction between the artificial devices implantable into human bodies that are proper for subclass A61F and those proper for subclass A61M is somewhat imprecise. Therefore, for analogous situations that are not specifically covered by existing groups of these subclasses, the following listings are intended to provide guidance.

Subclass A61F provides for the following replacements or substitutes for internal body organs or their parts: hollow or tubular parts of organs (e.g. bladders, tracheae, bronchi, heart valves and blood vessels, bile ducts), structural supporting or maintaining devices for such parts (e.g. stents), artificial eyes and artificial ears.

Subclass A61M provides for the following replacements or substitutes for internal body organs or their parts: artificial hearts (based on catchword index), artificial livers, artificial lungs, artificial pancreas, artificial kidneys and catheters in general.

Devices for introducing media into or onto the body, devices for taking media from the body are also covered by subclass A61M.

Spectacles, sunglasses, contact lenses or goggles insofar as they have the features of vision correction or protection against high levels of visible and ultraviolet light are covered by subclass G02C.

**Special rules of classification**

The breakdown symbols (i.e. the non "parallel" or non "mirror" symbols) and "orthogonal" symbols are to be used for classifying the invention information (in addition to the invention symbols) in case the invention is insufficiently classified by an invention information symbol. They are also to be used for classifying the additional information. They are stored in the additional information field.

Classify in both A61M and A61F if the disclosed utility is injecting media into the body, e.g. blood, to cool the body.

**Glossary of terms**

In this place, the following terms or expressions are used with the meaning indicated:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Absorbent articles</td>
<td>Articles adapted to absorb liquid excreted by the body.</td>
</tr>
<tr>
<td>Dilator</td>
<td>A (surgical) device or instrument used to dilate, distend, enlarge, expand, stretch an opening, organ, passage, tube, canal or cavity of a human or animal body (e.g. urethrotomy, tracheotomy, nasal, anal or cervix (Hegar's dilator) or vaginal dilation, bougienage, percutaneous dilation of tissues (Byrd dilator), whereas stents are not dilators but prostheses for providing patency, or preventing collapsing of tubular structures of the body.</td>
</tr>
<tr>
<td>Disabled person</td>
<td>A human being that is unable to do certain basic physical tasks (e.g. walking) due to a physical or mental impairment/condition.</td>
</tr>
<tr>
<td>Patient</td>
<td>A human being awaiting or undergoing any form of (a) medical care (e.g. testing) or treatment by medical staff (e.g. doctors, dentists, midwives, chiropractors), or (b) physical tending (e.g. feeding) by care giver (e.g. hospice or nursing home staff) due to impairment.</td>
</tr>
<tr>
<td>Stent</td>
<td>Balloon- or self-expandable tubular device for use in the treatment of duct-like organs typified for example by a blood vessel, biliary tract, urinary tract, digestive tract, and the like providing patency.</td>
</tr>
<tr>
<td>Stent graft</td>
<td>Stent with a tubular member made of a synthetic resin affixed to the inside or outside of the stent.</td>
</tr>
</tbody>
</table>

**Synonyms and Keywords**

In patent documents, the following words/expressions are often used with the meaning indicated:

<table>
<thead>
<tr>

Implantation instruments for intraocular lenses

A61F 2/1662
**A61F 2/16**

**Intraocular lenses**

**Definition statement**

*This place covers:*

An intraocular lens (IOL) is an optically active element implanted in the eye, either replacing a removed natural crystalline lens (aphakic) or for additional refractive correction of the existing crystalline lens (phakic) or a separate artificial IOL (pseudo-phakic).

An intraocular prism shifting the image on the retina slightly away from the fovea (e.g. in case of macular degeneration) is considered as an IOL.

A61F 2/1613

{having special lens configurations, e.g. multipart lenses; having particular optical properties, e.g. pseudo-accommodative lenses, lenses having aberration corrections, diffractive lenses, lenses for variably absorbing electromagnetic radiation, lenses having variable focus}

Definition statement

This place covers:

Having special lens configuration and particular optical properties, e.g. pseudo-accommodative, having variable focus, aberration correcting, multipart, diffractive, variably absorbing electromagnetic radiation.
A61F 2/1616
{Pseudo-accommodative, e.g. multifocal or enabling monovision}

Definition statement
This place covers:
Pseudo-accommodative IOL having fixed power or power distribution, the brain selects the sharp image formed on the retina, neglecting blurred images.

References
Limiting references
This place does not cover:

| Accommodative IOL having variable focal power | A61F 2/1624 |
A61F 2/1618

{Multifocal lenses}

Definition statement

This place covers:

A plurality of different but fixed powers usually distributed on concentric circles, bifocal lenses are comprised.

A61F 2/1621

{enabling correction for monovision}

Definition statement

This place covers:

A different lens in each eye, with different foci, e.g. to enable near and far vision.
Term referring to a method of correcting presbyopia by using a lens corrected for distance in one eye (usually the dominant one) and a lens corrected for near in the other eye. Binocular vision is impaired with this method, especially stereoscopic vision. It is assumed that at any time one eye is focused while the other is not and the cortical visual system suppresses this latter image.

[Image taken from WIKIPEDIA]

A61F 2/1662
{Instruments for inserting intraocular lenses into the eye}

Definition statement

This place covers:
Any kind of instrument for inserting IOL in an eye during surgery for implantation

Relationships with other classification places

Instruments for inserting mechanical ocular implants: A61F 2/148

Instruments for directly injecting therapeutic agents or drug eluting implants in an eye: A61F 9/0008
**A61F 2/1664**

{for manual insertion during surgery, e.g. forceps-like instruments}

**Definition statement**

*This place covers:*

Instruments for manually (folding) and inserting an IOL in an eye during surgery, e.g. forceps-like
For manual insertion during surgery, e.g. forceps-like instruments, tweezers
A61F 2/1667
{with rotatable plungers}

**Definition statement**

This place covers:
IOL insertion instrument having a plunger for moving and ejecting the IOL actuated by rotation

EP 1 972 306 A1

**FIG. 1**

![Diagram](image)
**A61F 2/167**

{with pushable plungers}

**Definition statement**

*This place covers:*

Instruments for inserting an IOL in an eye during surgery, the plunger for moving and ejecting the IOL being actuated by being pushed.
**A61F 2/1672**

*{with a two-stage plunger, e.g. rotatable and pushable or rotatable at different speeds}*

**Definition statement**

*This place covers:*

Instruments for inserting an IOL in an eye having a plunger that allows for different kind of actuation e.g. for advancing and for ejecting the IOL
A61F 2/1675

{with a lubricated inner surface, e.g. the lubricant being coated on the inner surface or being injected through a port}

Definition statement

This place covers:

Insertion instruments having a lubricated surface, e.g. of the barrel, the loading chamber, the folding section or the ejecting nozzle, for reducing friction
A61F 2/1678
{with a separate cartridge or other lens setting part for storage of a lens, e.g. preloadable for shipping}

Definition statement

This place covers:

Insertion device having a separate cartridge, e.g., for storing (pre-packing) or for compaction of lens in order to avoid contamination due to handling of the IOL during loading in the inserter.
Relationships with other classification places

Packages or dispensers for IOL: A61F 2/1691
A61F 2/1691

{Packages or dispensers for intraocular lenses (for contact lenses A45C 11/005)}

Definition statement

This place covers:

Packages and holders for IOL; individual containers or packages suitable for encasing and/or securing intraocular lenses e.g. for shipping and/or storage before implantation

Bones (joints A61F 2/30)

**Definition statement**

This place covers:

Prosthetic bones, i.e. implants for replacing bones or parts of bones.

**Relationships with other classification places**

Surgical implants which are not prosthetic, but added to the natural bone, are classified in A61B 17/00. Examples classified in A61B 17/00 are: Bone plates, bone screws, bone fixators, devices for injection of materials into bone.

Joints

Definition statement

This place covers:
Prosthetic joints, i.e. implants for replacing joints or parts of joints. The classes A61F 2/30 - A61F 2/46 comprise:

- Hip joints
- Knee and elbow joints
- Shoulder joints
- Wrist, ankle, finger and toe joints
- Vertebrae and vertebral joints
- Tools for implanting or extracting prosthetic joints
- Operating or control means
- Accessories
- Cartilage endoprostheses
- Special articulating or bone contacting surfaces

Relationships with other classification places

Surgical implants which are not prosthetic, but added to the natural joint, are classified in A61B 17/00.
Examples classified in A61B 17/00 are: Devices implanted between the natural articulating surfaces, devices implanted adjacent a natural joint for stabilising it.

A61F 2/30 contains implantable devices for replacing anatomical joints.

Special rules of classification

Additional information is classified under A61F 2/30 - A61F 2002/48. Any additional information which may be useful for search must be completely classified.
Additional information concerning a particular anatomical joint is classified under the corresponding subgroup (A61F 2/32 - A61F 2002/48).

Additional information concerning accessories is classified under A61F 2/30721.

Additional information concerning cartilage endoprostheses is classified under A61F 2/30756.

Additional information concerning external or bone-contacting surfaces of joint or bone prostheses is classified under A61F 2/30767.

Additional information concerning manufacturing of endoprostheses is classified under A61F 2/3094.

Additional information concerning anatomical joints not covered by A61F 2/32 - A61F 2/44 is classified under A61F 2/30988.

Further additional information applicable for joint or bone prostheses is classified under A61F 2002/30003 - A61F 2002/30667.

Additional information concerning the use of particular materials in joint or bone prostheses is classified under A61F 2310/00.

Additional information for which classes exist in neighbouring fields, is coded in said fields, e.g.

- Joint distractors: A61B 17/025
- Surgical staples for bones: A61B 17/0642
- Securing of bone screws: A61B 17/8033, A61B 17/8052
- Fastening to the bone by wires, bands or straps: A61B 17/842
- Fastening to the bone by screws or pins: A61B 17/86
- Packages for prostheses: A61F 2/0095
- Fixation devices for tendons or ligaments: A61F 2/08

Special rules of classification
Prosthetic liners or sockets with a heating or cooling function should also be classified under A61F 2007/0051 as Additional Information.

A61F 2/82
Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents (stent-grafts for tubular structures of the body other than blood vessels A61F 2/04; stent-grafts for blood vessels A61F 2/07; instruments specially adapted for placement or removal of stents or stent-grafts A61F 2/95; for closing wounds, or holding wounds closed A61B 17/04 - A61B 17/115; dilators A61M 29/00)

Definition statement
This place covers:
Stents with tubular structures deployed within a stenosis in order to widen and support the vessel. The stent is usually made from a rigid material like metal or polymer.
Illustrative examples for classification:

**A61F 2/82** /low (specific stent class) A61F 2002/065, A61F 2002/828 (means for connecting a plurality of stents)

**A61F 2/82** /low (specific stent class) A61F 2002/067, A61F 2002/828, A61F 2/856: If it is not clear if there is a portal or if there are 2 stents connected, classify both possibilities

Synonyms and Keywords
In patent documents, the following words/expressions are often used as synonyms:
- "net", "net-like", "mesh" and "mesh-like"
A61F 2/91
made from perforated sheet material or tubes, e.g. perforated by laser cuts or etched holes

Definition statement
This place covers:
Stents made from perforated sheet material or tubes. Perforated sheet material or tubes are created by methods including, for example, laser cutting, etching or some other techniques.
**A61F 2/915**

with bands having a meander structure, adjacent bands being connected to each other

**Definition statement**

*This place covers:*

Stents having a meander or wave-like pattern. The stent comprises several meander bands. Each meander band forms peaks and throughs. The bands are connected to each other by struts (see connector 50 between bands 40 and 60 in the example drawing) or directly connected without struts.

**Special rules of classification**

The meander structure receives further additional classification:

The meander having a difference in amplitude along the band: A61F 2002/91508

The meander having a change in frequency along the band: A61F 2002/91516

Within the whole structure different bands showing different meander characteristics, e.g. frequency or amplitude: A61F 2002/91525

Characterised by the phase between adjacent bands: A61F 2002/91533

Adjacent bands are arranged out of phase: A61F 2002/91541

Adjacent bands being connected to each other: A61F 2002/9155

Adjacent bands being connected peak to peak, i.e. bridge with each end connected to a convex side of an apex: A61F 2002/91558

Adjacent bands being connected trough to trough, i.e. bridge with each end connected to a concave side of an apex: A61F 2002/91566

Adjacent bands being connected peak to trough, i.e. bridge with one end connected to a convex side of an apex and with the other end connected to a concave side of an apex: A61F 2002/91575

Adjacent bands being connected by a bridge, whereby at least one of its ends is connected along the length of a strut between two consecutive apices within a band: A61F 2002/91583
Locking connectors, e.g. using male-female connections: A61F 2002/91591

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

An amplitude is:

**Amplitude**

Frequency:

Sinusoidal waves of various frequencies; the bottom waves have higher frequencies than those above. The horizontal axis represents time.

**File:** Sine waves different frequencies.svg

*From Wikipedia, the free encyclopedia*

**Special rules of classification**

Packages or dispensers for contraceptive devices

A61F 6/005

Contraceptive devices for males, like condoms, sheaths or the like, e.g. combined with devices protecting against contagion

A61F 6/04

Contraceptive device for females, like intra-vaginal or intra-uterine devices

A61F 6/08

Occluders for vas deferens or fallopian tubes

A61F 6/20

Note: Additional information is classified under A61F 6/00 - A61F 6/24.
A61F 7/00

Heating or cooling appliances for medical or therapeutic treatment of the human body (heating or cooling means in connection with bedsteads or mattresses A47C 21/00; massage, therapeutic baths A61H; hyperthermia using electric or magnetic fields or ultrasound A61N; electric heating elements H05B)

Definition statement

This place covers:
Heating and cooling of (parts of) a patient for therapeutic purposes not resulting in tissue destruction or intended tissue damage.

References

Limiting references

This place does not cover:

| Heating or cooling for surgical purposes, such as tissue removal, ablation, coagulation etc. | A61B 18/00 - A61B 18/24 |
| Heating or cooling of tissue immediately around tissue treated by a surgical probe | A61B 2018/00005 |

| Therapeutic heating with ultrasound | A61N 7/02 |
| Heating for divers | B63C 11/28 |
| Materials for the production of heat or cold by chemical reaction | C09K 5/00 |
| Refrigeration in general | F25B 1/00, F25C 1/00, F25D 1/00 |
| Electrical heating means | H05B 1/00 |
Special rules of classification

Documents describing treatment with a device for heating alone or a device described to be able to apply both heating and cooling (with the necessary adaptations to the heat source, e.g. a self-heating exothermic pad which is described or claimed as being equally configurable as self-cooling endothermic pad by using the appropriate chemicals) should be classified in A61F 7/00 - A61F 7/08 or A61F 7/12.

Documents related to bags, pads etc. exclusively using cooling should be classified in A61F 7/10 (e.g. chemically cooled endothermic pads only described for cooling in A61F 7/106).

As an exception in A61F 7/00, A61F 2007/0056 and A61F 2007/0063 also exclusively deal with cooling.

Further details of subgroups

A61F 7/0053: Cabinets, rooms chairs or other equipments for treatment with a hot or cold circulating fluid. Does not cover heating pads with a circulating fluid, those are to be classified in A61F 7/02.

A61F 2007/0054: “closed fluid circuit” refers to a device in which the circulating thermal medium, e.g. water, is not in direct contact with the treatment area;

A61F 2007/0059: “open fluid circuit” refers to a device in which the circulating thermal medium, e.g. water, is in direct contact with the treatment area;

A61F 7/007: Electrically heated or cooled devices.

A61F 7/0085: Devices for generating hot or cold treatment fluids, the devices not being in direct contact with the patient. Only the fluid is transported from the device to a separate patient heating or cooling device.

A61F 7/0097: Heating blankets. Only blankets with an active heating or cooling source, no ordinary blankets keeping warm by insulation only (to be classified in A47G 9/0207).

A61F 7/02: Compresses, poultices or other pads for heating or cooling.

A61F 7/03: Chemical heating devices. Not the chemicals as such (to be classified in C09K 5/00), only as part of a device to be used on the body for therapy.

A61F 7/08: Hot water bottles for heating, refillable with a non-circulating hot or cold fluid.

A61F 7/10: Cooling bags, pads etc. exclusively used for cooling.

A61F 7/106: Chemical cooling devices. Not the chemicals as such (to be classified in C09K 5/00), only as part of a cooling device used on the body.

A61F 7/12: Cooling devices for internal body cavities.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

<table>

**A61F 2007/0054**

{with a closed fluid circuit, e.g. hot water}

**Definition statement**

*This place covers:*

"closed fluid circuit" refers to a device in which the circulating thermal medium, e.g. water, is not in direct contact with the treatment area.

**A61F 7/03**

thermophore, i.e. self-heating, {e.g. using a chemical reaction}

**Special rules of classification**

Documents with self-cooling as well as self-heating devices are classified here, even though the title covers only self-heating devices

**A61F 9/00**

Methods or devices for treatment of the eyes; Devices for putting-in contact lenses; Devices to correct squinting; Apparatus to guide the blind; Protective devices for the eyes, carried on the body or in the hand (caps with means for protecting the eyes A42B 1/06; visors for helmets A42B 3/22; {retractors A61B 17/02; manipulators specially adapted for use in surgery A61B 34/70}; appliances to aid invalids to move about A61H 3/00; {exercisers for the eyes A61H 5/00}; eye baths A61H 35/02; sunglasses or goggles having the same features as spectacles G02C)

Treatment of outflow of aqueous humor.

The most practiced surgery intended to reduce aqueous humor production is the cyclodestruction technique. When cyclodestruction is performed with a laser, it is called cyclophotocoagulation. High Intensity focused Ultrasound can be used to obtain a cyclodestruction.

A61F 9/0079

{using non-laser electromagnetic radiation, e.g. non-coherent light or microwaves}

Definition statement

This place covers:

Methods or devices for eye surgery (i.e. destruction, modification or removal of tissue) using electromagnetic radiation other than laser, e.g. non-coherent light or microwaves.

Special rules of classification

A61F 9/0079

The application of non-laser electromagnetic radiation for surgical purposes covers, inter alia, applications whereby infrared or microwave radiation is applied to heat the cornea in order facilitate its shaping by a mold. The relevant information here is the application of the electromagnetic radiation, not the mold. Contact lenses in general, including orthokeratology lenses, are covered by G02C 7/04.

A61F 9/008

using laser

Definition statement

**Special rules of classification**

The scheme in A61F 9/008 contains several independent classification trees covering different aspects of a laser system for eye surgery.

The effect produced by the laser beam in the tissue should be classified in A61F 9/00802, A61F 9/00821, A61F 9/00825, or A61F 2009/00842 and lower hierarchical groups thereof.

Auxiliary devices contacting the eyeball like for coupling in the surgical laser light are classified in A61F 9/009.

Further aspects are then classified in codes according to:

- The control or steering of the laser beam during the treatment (subgroups of A61F 2009/00844).
- The calibration of any component in the laser system (A61F 2009/00855 and subgroups thereof).
- The part of the eye to be treated (subgroups of A61F 2009/00861).
- The planning of the irradiation before the treatment, like based on particular information or measurements (A61F 2009/00878 and subgroups thereof).
- The disease to be treated (subgroups of A61F 2009/00885).
- Particular algorithms or mechanisms for scanning the beam (A61F 2009/00897).

A61F 9/00812 and A61F 9/00834.

This groups cover inlays, onlays and intraocular lenses for implantation but specially adapted to be molded by a photoablative or photodisruptive beam. Implantable corneal inlays and onlays and for direct refractive correction and intraocular lenses in general are covered by A61F 2/145 and A61F 2/16.

**A61F 9/013**

{Instruments} for compensation of ocular refraction (A61F 9/008 takes precedence); Instruments for use in cornea removal, for reshaping or performing incisions in the cornea.

A61F 11/045

{using mechanical stimulation of nerves (acting directly on the ear H04R 25/00)}

Definition statement

This place covers:

Any kind of stimulation of the auditory system (outer ear, middle ear, inner ear, and auditory nerve) causes "auditory perception". Usually, application of vibration on the skull (like as in so called bone anchored hearing aids) causes vibrations in the cochlea that lead to auditory perception. Therefore, vibro-stimulation does not replace the auditory perception with another kind of reception (e.g., visual or tactile perception).

References

A61F 13/00

Bandages or dressings (suspending bandages A61F 5/40; {contact-avoiding wound protectors A61F 15/008; bandages or dressings with incorporated medicaments A61L 15/44, A61M 35/006; radioactive dressings A61N 5/1029}); Absorbent pads (chemical aspects of, or use of materials for, bandages, dressings or absorbent pads A61L 15/00; {absorbent pads for tracheostomy A61M 16/047})

Definition statement

This place covers:

Articles intended to be in contact with the human skin and absorb fluids excreted by the human body, i.e. wound dressings and bandages adapted to be attached to the injured skin or to be held against the injured place. In addition to the wound dressings, this group covers also articles which are indented to be used for injured parts of the body, e.g. plaster of Paris and any kind of stiffening bandage.
Articles intended to be attached to the body or worn in conjunction with another garment or being held in place by their shape and intended to absorb excretions from any natural opening (genital, anal, nose, mouth, ear) and during surgery.

Method and apparatuses of manufacturing these articles.

**Relationships with other classification places**

*A61F 5/01 - A61F 5/40* cover stiffening bandages for immobilizing extremities. The difference with *A61F 13/04-A61F 13/14* is that (with the exception of *A61F 13/04*) in *A61F 13/06-A61F 13/14* no rigid parts are used. If rigid parts are used, then *A61F15/01* should be taken into consideration. *A61F 5/44* covers devices worn by the patient for reception of urine, faeces, catamenial or other discharge which are rather receptacles or bags other than diapers or absorbent pads.

Informative references

The swabs for cleaning wounds or absorbing wound liquids during surgery

A61F 13/36, A61F 13/38

A61F 13/42

with wetness indicator or alarm

Definition statement

This place covers:

All articles having means for indicating the article is wet, independently of the kind of absorbent article (napkins, diapers, tampons, wound dressings) or indicator (chemical, electrical, tactile etc.).

Relationships with other classification places

For determining moisture content, e.g. humidity, of the fluid by the use of electric, electro-chemical, or magnetic means G01N 27/00.

A61F 13/45

characterised by the shape (cup-shaped type tampons A61F 13/2045)

Definition statement

This place covers:

The two- or three-dimensional shape of articles or the shape of details thereof, and is intended as a head group to branch down to either articles needing another article or adhesive to be held against the body (A61F 13/47) or articles that are self-supporting e.g. diapers (A61F 13/49).

A61F 13/47

Sanitary towels, incontinence pads or napkins (A61F 13/49 takes precedence)

Definition statement

This place covers:

Absorbent articles that need another article or adhesive to be held against the body or articles which are held in place by the specific female or male anatomy.

A61F 13/4702

{having a reinforcing member}

Definition statement

This place covers:

Articles of the feminine hygiene napkin type having a reinforcing member to keep the shape in a desired form.
A61F 13/4704
{having preferential bending zones, e.g. fold lines or grooves}

Definition statement

This place covers:
Articles of the feminine hygiene napkin type where the fold lines or grooves are intended for allowing the article to fold or bent around them rather than being a barrier.

References

Informative references

A61F 13/47209
{having only interlabial part, i.e. with no extralabial parts}

Definition statement

This place covers:
Articles which are intended to be placed against and to be hold by the labiae of the female anatomy.

References

Limiting references

This place does not cover:

| Articles intended to be worn inside the vagina e.g. tampons | A61F 13/2051 |

A61F 13/47218
{with a raised crotch region, e.g. hump}

Definition statement

This place covers:
Articles of the feminine hygiene napkin type having a portion which is elevated in relation to the rest of the article with the intention to be in close contact with the source of excretions for acquiring easily the fluids.

A61F 13/47227
{for interlabial use}

Definition statement

This place covers:
Articles of which the dimension of the elevated portion permits the elevated portion to be inserted between the labia majora or deeper in the vagina.
A61F 13/47263
{with activating means, e.g. elastic, heat or chemical activatable means}

Definition statement
This place covers:
Articles of the feminine hygiene napkin type which have means that are in a latent state. During use or just before the use of the article the means are activated to perform a function so that the shape of the article is altered, e.g. elastics that stay inactive until they become wet in order to have a flat article before use and once wet their elastic properties become active and the shape of the article changes to a curved form.

References
Limiting references
This place does not cover:

| Means which upon activation perform another function than changing the shape | A61F 13/8405 |
| Skin enhancers | A61F 13/8405, A61F 13/51113 |

A61F 13/474
adjustable

Definition statement
This place covers:
Articles of the feminine hygiene napkin type which are manually or elastically adjustable to fit the body shape or to increase or decrease their absorbency

A61F 13/475
characterised by edge leakage prevention means

Definition statement
This place covers:
Articles of the feminine hygiene napkin type having a kind of barrier to prevent the liquid from leaking out of the article and soil the underwear.

References
Limiting references
This place does not cover:

| The liquid impermeable backsheet per see | A61F 13/514 |
A61F 13/476
characterised by encircling the crotch region of the undergarment

**Definition statement**

*This place covers:*

Articles of the feminine hygiene napkin type having wings or flaps for being wrapped over the edge of the underwear. However the primary function of the flaps should be the prevention of leakage or soiling the undergarment.

**References**

*Limiting references*

*This place does not cover:*

| Flaps intended for fastening the article on the underwear the groups | A61F 13/5605 |

A61F 13/49

Absorbent articles specially adapted to be worn around the waist, e.g. diapers

**Definition statement**

*This place covers:*

Articles which due to their form are self sustained around the waist, e.g. diapers, or pant form diapers.

A61F 13/49003

{Reusable, washable fabric diapers}

**Definition statement**

*This place covers:*

Absorbent articles that are washable and as such reusable. If a part mostly the outer cover/chassis is washable and has an exchangeable insert but the invention relies in the washable part then this document is to be classified in this subgroup and get an Indexing Code in A61F 13/505. If however only the exchangeability of parts is disclosed so that they are to be reused several times without being of a special fabric having the possibility to be washed then this document is classified in A61F 13/505.

A61F 13/49004

{with fastening means}

**References**

*Limiting references*

*This place does not cover:*

| Fastening means per se | A61F 13/56, A61F 13/58 |
A61F 13/4907
{Form-fitting, self-adjusting disposable diapers}

Definition statement

This place covers:
Diapers or pants type diapers where the invention relies in the elastic or stretchable features intended to aid the article to conform to the body of the wearer.

References

Limiting references

This place does not cover:

| Elastic barriers which are covered by the edge leaking prevention | A61F 13/49413 |

A61F 13/4902
{characterised by the elastic material}

Relationships with other classification places
Extensible layered products B32B 5/04, B32B 5/26, B32B 27/12, B32B 37/144

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Layered products characterised by the non-homogeneity or physical structure characterised by structural features of a layer specified as extensible | B32B 5/04 |
| Layered products characterised by the non-homogeneity, or physical structure characterised by features of foamed layer material with fibrous or filamentary layers | B32B 5/26 |

A61F 13/493
adjustable {by adding or removing material, e.g. umbilical cord arrangements (adjustable by the fastening A61F 13/5638, A61F 13/5655)}

Definition statement

This place covers:
Articles that are manually adjustable to conform the body shape or size.
A61F 13/496
{the edge leakage prevention means being an absorbent medium
(A61F 13/4946 takes precedence)}

Definition statement
This place covers:
Articles that have secondary absorbent material located at the side edges of the article, mostly next to
the main absorbent core. If the secondary absorbent material is located at the end edges then this is
covered by A61F 13/4946.

References
Limiting references
This place does not cover:
The difference of absorbency of the absorbent core in the X-Y direction per se
A61F 13/532,
A61F131/535

A61F 13/51
characterised by the outer layers {(wicking or transfer layers A61F 13/537)}

Definition statement
This place covers:
The outer layers of the absorbent articles whether feminine napkin tape or diapers. A backsheet is
understood as the layer or composite layer that is intended to inhibit the liquid from flowing down of
the article. A topsheet is understood as the layer which is in close contact with the skin for receiving
the liquid.

A61F 13/511
Topsheet, i.e. the permeable cover or layer facing the skin

References
Limiting references
This place does not cover:
If the layer immediately under the topsheet is a separate layer, i.e. not
laminated to the topsheet and has the function of spreading the liquid in
the X-Y direction
A61F 13/537
A61F 13/514
Backsheet, i.e. the impermeable cover or layer furthest from the skin
{(A61F 13/15211, A61F 13/15252 take precedence)}

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

If the inner layer immediately adjacent but not laminated to the backsheet is intended to distribute the liquid in the X-Y direction

A61F 13/51466
{providing stretchability without the use of elastic material}

Definition statement
This place covers:
The material is, e.g. corrugated SELF or ring rolled so as to impart to the backsheet stretchability without being elastic.

A61F 13/51478
{being a laminate, e.g. multi-layered or with several layers}

References
Limiting references
This place does not cover:

If the inner layer immediately adjacent but not laminated to the backsheet is intended to distribute the liquid in the X-Y direction

A61F 13/53
characterised by the absorbing medium (A61F 13/20 takes precedence)

Definition statement
This place covers:
The absorbent core of the absorbent articles. If the structure of the core is intended for conforming the body fit or the leakage prevention then this is covered by the corresponding subgroups A61F 13/47, A61F 13/475 or A61F 13/49, A61F 13/494.

Relationships with other classification places
Chemical composition: A61L 15/16
