

A62D

CHEMICAL MEANS FOR EXTINGUISHING FIRES OR FOR COMBATING OR PROTECTING AGAINST HARMFUL CHEMICAL AGENTS; CHEMICAL MATERIALS FOR USE IN BREATHING APPARATUS

Definition statement

This place covers:

Compositions:

- for fire-extinguishing;
- of materials for coverings or clothing affording protection against harmful
- chemical agents;
- of materials for transparent parts of gas-masks, respirators, breathing bags or
- helmets;
- of chemical substances for use in breathing apparatus.

Use of chemical substances in extinguishing fires.

Processes chemical, bio-chemical or physico-chemical for chemically altering harmful chemical substances into safe or less dangerous substances.

A62D 1/00

Fire-extinguishing compositions; Use of chemical substances in extinguishing fires (fireproof paints [C09D 5/18](#); fireproofing materials [C09K 21/00](#))

Definition statement

This place covers:

Compositions for fire-extinguishing

Use of chemical substances in extinguishing fires

References

Limiting references

This place does not cover:

Fire prevention, fire containment or fire fighting, e.g. portable extinguishers or fire-fighting vehicles	A62C
---	----------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Fireproof paints	C09D 5/18
Fireproofing materials	C09K 21/00

Special rules of classification

The following IPC groups are not used in the internal ECLA classification scheme. Subject matter covered by these groups is classified in the following ECLA groups:

A62D1/02 covered by [A62D 1/0007](#), [A62D 1/0071](#)

A62D1/04 covered by [A62D 1/0071](#)

A62D1/08 covered by [A62D 1/0007](#) - [A62D 1/0028](#), [A62D 1/0057](#), [A62D 1/0092](#)

A62D 3/00

Processes for making harmful chemical substances harmless or less harmful, by effecting a chemical change in the substances (consuming noxious gases by combustion [F23G 7/06](#))

Definition statement

This place covers:

Processes for chemically altering harmful chemical substances into safe or less-dangerous substances.

These processes can be chemical, bio-chemical or physico-chemical processes, e.g. use of special chemical reagents for chemical fixing, which result in the decomposition or transformation of the harmful chemical substances into harmless or less harmful substances because of a change in their chemical structure.

These processes can comprise the step of dissolving or dispersing the harmful chemical substances in water for the purpose of treating them, or the step of producing, for treatment, a gaseous product from a non-gaseous harmful chemical substance.

The harmful chemical substance can be one component of a mixture, e.g. a component in contaminated sludge.

Relationships with other classification places

The disposal of solid waste or the reclamation of contaminated soil is classified elsewhere, i.e. in class [B09](#).

However, the treatment of a specific harmful chemical substance in solid waste resulting in the change of its chemical constitution to make it harmless or less harmful is covered by [A62D 3/00](#).

In the same way, treatment of sludge is not classified here with the exception of the treatment of a specific harmful chemical substance in the sludge, e.g. in residues from industrial processes (excluding contaminants from municipal sewage treatment) resulting in the change of its chemical constitution to make it harmless or less harmful.

Preventive chemical treatments, e.g. to prevent the formation of harmful chemical substances are classified elsewhere, depending on the kind of treatment and/or the context of application.

Chemical or physico-chemical type processes where eradicating or diminishing the dangerousness of harmful chemical substances produces useful products (e.g. cement) are not covered here. These types of processes are covered by the appropriate subclass for making the specific product.

However in situations where processes for making products include a subset of process steps with eradicating or diminishing the dangerousness of a harmful chemical substance as its fundamental goal, and this subset is in itself novel and unobvious, this subset is covered by group [A62D 3/00](#).

When enzymes or microorganisms are used within processes fully provided for in subclass [A62D](#) in order to liberate, separate or purify a pre-existing compound or composition or to treat or clean textiles or solid material surfaces, they should also be classified in subclass **C12S** based upon its Note (1) to provide a complete search.

Disinfection or sterilizing methods specially adapted for refuse	A61L 11/00
Waste or refuse as compounding ingredient for glass, cement, mortar, concrete, artificial stone or ceramics	C03C , C04B
Materials for absorbing liquids to remove pollution, e.g. oil, gasoline, fat	C09K 3/32
Destructive distillation of carbonaceous materials	C10B
Destructive hydrogenation of carbonaceous materials	C10G 1/06
Microorganisms, enzymes or compositions thereof	C12N
Consuming waste by combustion	F23G
Removal or treatment of combustion products or combustion residues	F23J

Special rules of classification

- In this group, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.
- Indexing Codes:

(1) When classifying in this group the Indexing Codes of group [A62D 2101/00](#) are to be used for identifying the origin or chemical nature of the harmful chemical substances which are made harmless or less harmful by processes already classified as such in groups [A62D 3/02](#) - [A62D 3/40](#)

(2) When indexing a substance in groups [A62D 2101/02](#) - [A62D 2101/08](#), indexing according to its chemical structure is also made in one or more of groups [A62D 2101/20](#) - [A62D 2101/40](#), if of interest [C0704]

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Catalyst	Substance which either increases or decreases the speed of a chemical reaction, without itself undergoing a permanent chemical change.
Chalcogen	Also known as chalcogenides, specifically O, S, Se, Te.
Harmful	Directly toxic to living organisms, with the exception of toxic to plants only.
Harmful chemical substances	Chemical waste substances which are too hazardous or toxic to be discarded in an ordinary municipal landfill.
Halogens	The elements F, Cl, Br, I, At.
Physico-chemical	Having at least one chemical step and one physical step.
Sludge	Residue (normally viscous) from an industrial, residential, or agricultural process.

A62D 5/00

Composition of materials for coverings or clothing affording protection against harmful chemical agents

Definition statement

This place covers:

Materials for coverings or clothing affording protection against harmful chemical agents.

By materials is meant the chemical substances p.ex. active carbon, which are used in the covering or in the clothing, to neutralise/decompose the harmful agent.
