

B01L

CHEMICAL OR PHYSICAL LABORATORY APPARATUS FOR GENERAL USE

Relationships with other classification places

- Apparatus for medical or pharmaceutical purposes — [A61](#)
- Apparatus for industrial purposes or laboratory apparatus whose construction and performance are comparable to that of similar industrial apparatus. See the relevant classes for industrial apparatus, particularly subclasses of classes [B01](#) or [C12](#).
- Separating or distilling apparatus — [B01D](#)
- Mixing or stirring devices — [B01F](#)
- Apparatus for enzymology or microbiology — [C12M](#)
- Microorganisms or enzymes; Compositions thereof; Propagating, preserving or maintaining microorganisms; Mutation or genetic engineering; Culture media — [C12N](#)
- Measuring or testing processes involving enzymes, nucleic acids or microorganisms; Compositions or test papers therefor; Processes of preparing such compositions; Condition-responsive control in microbiological or enzymological processes — [C12Q](#)
- Atomisers — [B05B](#)
- Sieves — [B07B](#)
- Corks or bungs — [B65D](#)
- Handling liquids in general — [B67](#)
- Vacuum pumps — [F04](#)
- Tubes or tube joints — [F16L](#)
- Apparatus specially adapted for investigating or analysing materials — [G01](#), particularly [G01N](#)
- Electrical or optical apparatus — see the relevant classes in sections G and H

References

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Apparatus for enzymology or microbiology	C12M
Microorganisms or enzymes; Compositions thereof; Propagating, preserving or maintaining microorganisms; Mutation or genetic engineering; Culture media	C12N
Measuring or testing processes involving enzymes, nucleic acids or microorganisms; Compositions or test papers therefor; Processes of preparing such compositions; Condition-responsive control in microbiological or enzymological processes	C12Q
Apparatus specially adapted for investigating or analysing materials	G01 , G01N

Informative references

Attention is drawn to the following places, which may be of interest for search:

Apparatus for medical or pharmaceutical purposes	A61
Mixing or stirring devices	B01F
Atomisers	B05B
Sieves	B07B

Corks or bungs	B65D
Handling liquids in general	B67
Vacuum pumps	F04
Siphons	F04F 10/00
Taps or stop-cocks	F16K
Tubes or tube joints	F16L

Special rules of classification

Classification Rules:

Groups [B01L 1/00](#) – [B01L 99/00](#) are given for invention information, i.e. the information is such that, if you do a search on this subject-matter, it is important to see the document. The definitions below give guidance as to scope and limits of the respective groups. Additional information is classified with Indexing symbols in the range [B01L 1/00](#) – [B01L 99/00](#). These symbols are used with or without a group in [B01L](#). In addition to a group in [B01L](#), indexing symbols in the range [B01L 2200/00](#) – [B01L 2400/00](#) are applied where possible to all documents classified in [B01L](#). Indexing symbols [B01L 2200/00](#) – [B01L 2400/00](#) are not used for documents without a group in [B01L](#). Also, if documents have only an indexing symbol in the range [B01L 1/00](#) – [B01L 99/00](#), no Indexing symbol is used.

Double classification:

Often double classification will be necessary, also within [B01L](#) itself. For example, in documents relating to sample containers it might be that a document is classified for sample taking in [A61B 10/0045](#), for sample storage, in [B01L 3/50](#), and for a specific analysis technique, in [G01N](#).

B01L 1/00

Enclosures; Chambers (provided with manipulation devices or glove boxes [B25J 21/00](#))

Definition statement

This place covers:

Chambers, enclosures, rooms and cupboards for laboratory use which have no specific application.

Air-pressure chambers.

References

Limiting references

This place does not cover:

Chambers provided with manipulation devices, glove boxes	B25J 21/00
--	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Fume cupboards	B08B
Cooling chambers	F25D

B01L 1/02**Air-pressure chambers; Air-locks therefor****Definition statement**

This place covers:

Incubator or conditioning cabinet not otherwise provided for. Doors and bayonet designs.

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Glove boxes	B25J
Vacuum locks for discharge tubes	H01J 37/18

B01L 1/025

{Environmental chambers (incubators for culturing cells [C12M 41/14](#); test chambers to test weather resistance [G01N 17/002](#))}

Definition statement

This place covers:

Closed chambers, not otherwise provided for, to provide a defined environment such as temperature, pressure, humidity and other gas concentrations, climate chambers.

References**Limiting references**

This place does not cover:

Incubators for culturing cells	C12M 41/14
Test chambers to test weather resistance	G01N 17/002

B01L 1/04**Dust-free rooms or enclosures****References****Informative references**

Attention is drawn to the following places, which may be of interest for search:

Treatment rooms for medical purposes	A61G 10/00
Clean rooms for industrial use	F24F 3/167
Ventilation	F24F 7/00

B01L 1/50

{for storing hazardous materials in the laboratory, e.g. cupboards, waste containers (sample containers [B01L 3/50](#))}

Definition statement

This place covers:

Enclosures or chambers for storing hazardous materials in the laboratory.

References**Limiting references**

This place does not cover:

Sample containers	B01L 3/50
-------------------	---------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Refuse receptacles	B65F 1/00
--------------------	---------------------------

B01L 3/00

Containers or dishes for laboratory use, e.g. laboratory glassware; Droppers

Definition statement

This place covers:

Simple fluid transfer means, such as tubes, valves or fittings.

Various containers, in particular for sample or reagent storage also comprising microfluidic structures.

Droppers comprising various fluid dispensing means such as pipettes, burettes and droplet dispensers.

Spatulas.

References**Application-oriented references**

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Petri dishes	C12M 1/22
Tube or bottle type	C12M 1/24

Informative references

Attention is drawn to the following places, which may be of interest for search:

Chemical reactors	B01J 19/00
Bottles	B65D
Culturing devices	C12M 23/02

Receptacles for volumetric purposes	G01F
Analysis of a material	G01N

Special rules of classification

Due to the diversity of the subgroups in this group the head group is only rarely used to classify. It is preferred to use all relevant main groups instead.

B01L 3/02

Burettes; Pipettes

Definition statement

This place covers:

Burettes, pipettes, pipette tips, droplet counters, droplet dispensers (droppers), and other laboratory devices to withdraw and discharge a liquid.

Relationships with other classification places

This class relates to generally to manually operated devices, but is not restricted to hand held devices. Automation of pipetting stations is classified in [G01N 35/10](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Manual dosing	B05B
Closures with discharging devices	B65D 47/00
Dispensing not otherwise provided for	B67D
Repeated volume dosing of fluids in general	G01F 11/00
Dispensing of fluids in automatic analysers	G01N 35/10

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Pipette	Means with one port
Burette	Means with two ports
Dropper	Means to dispense the liquid dropwise

B01L 3/0203

{Burettes, i.e. for withdrawing and redistributing liquids through different conduits}

Definition statement

This place covers:

Burettes, i.e. for withdrawing and redistributing liquids through different conduits.

References

Limiting references

This place does not cover:

If the volume dispensed is droplet sized	B01L 3/0241
--	-----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Medical burettes	A61M 5/1412
------------------	-----------------------------

B01L 3/021

{Pipettes, i.e. with only one conduit for withdrawing and redistributing liquids}

Definition statement

This place covers:

Pipettes, i.e. with only one conduit for withdrawing and redistributing liquids.

References

Limiting references

This place does not cover:

If the volume dispensed is droplet sized	B01L 3/0241
--	-----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Pipette type sampler or inoculator for cell handling	C12M 33/04
--	----------------------------

Special rules of classification

If used to fill standard multiwell plates use [B01L 2300/0829](#).

B01L 3/0213

{Accessories for glass pipettes; Gun-type pipettes, e.g. safety devices, pumps}

Definition statement

This place covers:

This group covers accesories for (traditional) glass pipettes, such as safety devices to protect the user from inhaling hazardous fluids or pumps. This group also encompasses gun-type pipettors.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Gun type pipettors in general	G01F 11/026
-------------------------------	-----------------------------

B01L 3/0217**{of the plunger pump type (medical syringes [A61M](#))}****Definition statement***This place covers:*

Piston or plunger-type pipettes.

References**Limiting references***This place does not cover:*

Medical syringes	A61M 5/178
Fluid dosing with measuring chambers in general	G01F 11/02

B01L 3/022**{Capillary pipettes, i.e. having very small bore ([B01L 3/0224](#) - [B01L 3/0237](#) take precedence)}****Definition statement***This place covers:*

Pipettes where a piston or plunger is moved within a capillary.

Relationships with other classification places

Pipettes having a capillary needle but no plunger within the capillary are not classified here, use Indexing Code [B01L 2300/0838](#) in combination with appropriate group in [B01L 3/02](#) instead.

References**Limiting references***This place does not cover:*

Capillary pipette without piston	B01L 3/021 , B01L 3/0241
Pipettes having mechanical means to set stroke length	B01L 3/0224
Details of electronic control, e.g. relating to user interface	B01L 3/0237

Informative references*Attention is drawn to the following places, which may be of interest for search:*

Microinjections	C12N 15/89
-----------------	----------------------------

B01L 3/0231**{having several coaxial pistons}****Definition statement***This place covers:*

Plunger pipettes with coaxial pistons. This group does NOT cover multiple parallel plungers.

B01L 3/0234**{Repeating pipettes, i.e. for dispensing multiple doses from a single charge}****References****Limiting references***This place does not cover:*

Drop counters; Drop formers	B01L 3/0241
-----------------------------	-----------------------------

B01L 3/0241**{Drop counters; Drop formers (making arrays for combinatorial libraries [B01J 19/0046](#); automation of dispensing for analysis [G01N 35/10](#))}****Definition statement***This place covers:*

Droplet dispensers and droplet counters. This group covers the constructional details of the dispensing part itself not the automation aspects.

Relationships with other classification placesThe integration into automated systems is classified for instance in [G01N 35/10](#) and [B01J 19/0046](#)**References****Limiting references***This place does not cover:*

Making arrays for combinatorial libraries	B01J 19/0046
Spraying or atomising in general	B05B
Printing	B41J
Automation of dispensing for analysis	G01N 35/10

Informative references*Attention is drawn to the following places, which may be of interest for search:*

Means for dispensing and evacuation of reagents to make chemical libraries	B01J 2219/00351
Microinjections	C12N 15/89
Investigating characteristics of particles	G01N 15/00

Special rules of classification

If used to fill standard multiwell plates use [B01L 2300/0829](#).

B01L 3/0244

{using pins}

Definition statement

This place covers:

Droplet dispensers using pins.

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Nibs, quills, pens for writing and drawing	B43K 1/00
--	---------------------------

Special rules of classification

Use [B01L 2400/02](#) for details of printing action.

B01L 3/0258

{using stamps}

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Stamps in general	B41K
-------------------	----------------------

B01L 3/0262

{using touch-off at substrate or container}

Definition statement

This place covers:

In touch-off dispensers the liquid contacts the target surface while it still hangs at the dispenser thus leading to a bridge between the two bodies. Capillary forces draw the liquid subsequently, at least in part, to the target surface.

B01L 3/0268

{using pulse dispensing or spraying, eg. inkjet type, piezo actuated ejection of droplets from capillaries}

References**Limiting references**

This place does not cover:

Ink jet printing of ink	B41J 2/01
-------------------------	---------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Nozzles and apparatus for spraying or atomising in general	B05B 1/00
nebulizers for MS after chromatography	G01N 30/724
Introducing samples into mass spectrometers	H01J 49/04

B01L 3/0272

{Dropper bottles}

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Eye dropper	A61F 9/0026
Packaging container closures with dropper	B65D 47/18

B01L 3/0275

{Interchangeable or disposable dispensing tips}

Definition statement

This place covers:

Pipette tips, note that the subgroup also covers ejection means for pipette tips.

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Pipette tip racks	B01L 9/543
-------------------	----------------------------

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- "chip (in English translations of Japanese documents)" and " (pipette) tips"

B01L 3/0279**{co-operating with positive ejection means}****Definition statement***This place covers:*

Pipette tip ejectors.

Relationships with other classification places

Note that this is not restricted to the features of the tip itself but can also relate to the ejection mechanism of the pipette.

B01L 3/0282**{mounted within a receptacle (wash bottles [B01L 3/10](#))}****References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Eye dropper	A61F 9/0026
-------------	-----------------------------

B01L 3/0289

{Apparatus for withdrawing or distributing predetermined quantities of fluid ([B01L 3/02](#) takes precedence; sample taking [G01N 1/00](#); sample taking within automatic analysers [G01N 35/00](#); volume measuring in general [G01F](#))}

Definition statement*This place covers:*

Fluid handling apparatus not provided for in [B01L 3/02](#), this group is restricted to gas, beads or pulverized materials.

Relationships with other classification places

The subgroup is used as residual group for liquid handling.

B01L 3/0293**{for liquids}****Definition statement***This place covers:*

Liquid handling apparatus not provided for in [B01L 3/02](#).

B01L 3/06**Crystallising dishes****Relationships with other classification places**

Often used in combination with classes in [B01L 3/50](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Crystallization for separation	B01D 9/00
Sugars	C07H
Single crystal crystallization	C30B 7/00
Crystals of macromolecules	C30B 29/58

Special rules of classification

If used as a sample container double classify with relevant class in [B01L 3/50](#)

B01L 3/08

Flasks

Definition statement

This place covers:

Flasks used in the lab and not otherwise provided for. Flasks usually comprise an inlet which is smaller than the main body.

References

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Specially adapted for distillation	B01D
------------------------------------	----------------------

B01L 3/12

Gas jars or cylinders

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Gas storage containers in general	E17C
-----------------------------------	----------------------

B01L 3/16

Retorts

Definition statement

This place covers:

Retorts are simple distillation apparatuses. They often comprise round bases and turned down necks.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Distillation, microdistillation	B01D
---------------------------------	----------------------

B01L 3/50

{Containers for the purpose of retaining a material to be analysed, e.g. test tubes (devices for taking samples of blood [A61B 5/15](#))}

Definition statement

This place covers:

Simple containers that only store the sample and also more complex containers with integrated passive or active parts, which inter alia transport samples within them.

Relationships with other classification places

Containers for chemical synthesis, even if of small size, are classified in [B01J](#).

Containers specific to a single analytical technique are usually classified in the respective field, e.g. in [G01N](#), [C12M](#). Documents are double classified in both places when, due to their constructional aspects, they are also relevant for other applications.

References

Limiting references

This place does not cover:

Devices for taking samples of blood	A61B 5/15
-------------------------------------	---------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Reagent containers	B01L 3/52
Labcontainer with identification means	B01L 3/545
Apparatus for preservation of excised living parts of the human or animal body	A01N 1/142
Body liquid sampling	A61B 10/0045
Medical containers	A61J
Synthesis reactors	B01J
Containers for storage of materials	B65D
Constructional details of bioreactors for culturing	C12M 23/00
Petri dishes	C12M 23/10
Cuvettes constructions	G01N 21/03
Microscopic slides	G02B 21/34

Special rules of classification

It is important to note that this group is restricted to sample containers and not to lab containers in general.

B01L 3/502

{with fluid transport, e.g. in multi-compartment structures (centrifugal-type cuvettes [G01N 21/07](#); analysis by separation into components [G01N 30/00](#); automatic analysers [G01N 35/00](#))}

Definition statement

This place covers:

Sample container where fluid is transported during use between different parts of the container.

Relationships with other classification places

In addition to storage of the sample these containers usually enable other function as well, such as sample preparation or analysis. Double classification is preferred.

{Multi-well filtration}

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Filtration per se	B01D
Bioreactors	C12M

Purifying or cleaning a sample	G01N 1/34
--------------------------------	---------------------------

B01L 3/5027

{by integrated microfluidic structures, i.e. dimensions of channels and chambers are such that surface tension forces are important, e.g. lab-on-a-chip ([B01L 3/5023](#) takes precedence; micromixers [B01F 33/30](#); microreactors for synthesis [B01J 19/0093](#); microcapillary devices in general [B81B 1/00](#))}

Definition statement

This place covers:

Sample containers with integrated microfluidic components. Microfluidic components are not restricted to capillary transport but are defined by their small size.

Relationships with other classification places

Microfluidic devices can be found in a number of different fields. This group covers only those devices that are used to analyse a sample. The focus is on the sample handling per se in such devices, i.e. handling of fluids, beads, single molecules. The specifics of the analysis itself is for example classified in [G01N](#) and [C12Q](#).

Capillary fluid transport in porous materials as flow layers of sample containers, e.g. lateral flow devices, are classified in [B01L 3/5023](#).

References

Limiting references

This place does not cover:

Micromixers	B01F 33/30
Microreactor for synthesis	B01J 19/0093
Microcapillary devices in general	B81B 1/00

Informative references

Attention is drawn to the following places, which may be of interest for search:

Microdevices for drug release	A61K 9/0097
Sample preparation	G01N 1/00
Introducing samples into mass spectrometers	H01J 49/04

Special rules of classification

For microfluidic devices characterized by the specific integrated thermal control, e.g. for PCR, use double classification with [B01L 7/00](#).

Use index codes [B01L 2200/00](#)-[B01L 2400/00](#) as complete as possible.

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- "sample containers with integrated microfluidic components", "lab-on-a-chip" and "microfluidic device for analysis"

B01L 3/502707

{characterised by the manufacture of the container or its components (by shaping or joining plastic parts [B29C 59/00](#), [B29C 65/00](#); by laminating [B32B 37/00](#); manufacture of microstructural devices in general [B81C](#))}

Definition statement

This place covers:

Sample containers with integrated microfluidic components with specific manufacturing details.

References**Limiting references**

This place does not cover:

Manufacture of microstructural devices in general	B81C
---	----------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Shaping or joining of plastics	B29C 59/00 , B29C 65/00
Laminating	B32B 37/00
Microdevices for electrophoresis	G01N 27/44791
Photolithography	G03F 7/00

B01L 3/502715

{characterised by interfacing components, e.g. fluidic, electrical, optical or mechanical interfaces}

Definition statement

This place covers:

Integrated microfluidic interfaces, i.e. the section of the interface which forms part of the container.

Fluidic interfaces comprise inlets and outlets.

Optical interfaces may comprise lenses, prisms, mirrors.

Mechanical interfaces may comprise aligning marks, guides.

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Holders for lab-on-a-chips	B01L 9/52
Handling and feeding of cartridges in automated analysers	G01N 35/00

B01L 3/502723**{characterised by venting arrangements}****Definition statement***This place covers:*

Means to remove air or gases from a microfluidic sample container.

Also comprises documents where bubble formation is avoided.

References**Informative references***Attention is drawn to the following places, which may be of interest for search:*

Venting, avoiding backpressure, avoid gas bubbles	B01L 2200/0684
---	--------------------------------

B01L 3/50273**{characterised by the means or forces applied to move the fluids (micropumps [F04B 19/006](#), of the membrane type [F04B 43/043](#))}****Definition statement***This place covers:*

Means or forces to move fluid in microfluidic sample containers, e.g. integrated pumps.

References**Limiting references***This place does not cover:*

Influencing the flow rate for a given force	B01L 3/502746
Infusion devices with flow control	A61M 5/168
Micropumps in general	F04B 19/006
Micropumps of the membrane type in general	F04B 43/043

Informative references*Attention is drawn to the following places, which may be of interest for search:*

Micromixers	B01F 33/30
-------------	----------------------------

Special rules of classificationUse Indexing Codes [B01L 2400/04](#) to specify the kind of force or means to move the fluid.

B01L 3/502738

{characterised by integrated valves (microvalves [F16K 99/0001](#))}

Definition statement

This place covers:

This group covers the constructional details of valves specific to microfluidic sample containers. It also covers valving schemes when they depend on integrated structures, like cascades of capillary valves.

Relationships with other classification places

External valve actuators are classified in [F16K](#) or [G01N 35/00](#).

References**Limiting references**

This place does not cover:

Throttle valves in microfluidic sample containers	B01L 3/502746
Microvalves and actuators in general	F16K 99/0001

Informative references

Attention is drawn to the following places, which may be of interest for search:

Valves in automated analysers	G01N 35/1097
-------------------------------	------------------------------

Special rules of classification

For valve details use [B01L 2400/06](#).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Valve	Means to stop or divert the whole flow of a fluid
-------	---

B01L 3/502746

{characterised by the means for controlling flow resistance, e.g. flow controllers, baffles ([B01L 3/502738](#) takes precedence)}

Definition statement

This place covers:

Controlling the flow resistance in a microfluidic sample container which is neither valving, where the flow is stopped, nor pumping, which is the source of the force for the flow.

For example, providing baffles in order to slow but not stop a flow in a specific section of a channel. Adapting the channel dimensions to obtain a specific flow pattern.

B01L 3/502753

{characterised by bulk separation arrangements on lab-on-a-chip devices, e.g. for filtration or centrifugation (separation in general [B01D](#); microapparatus for analysis using electrophoresis [G01N 27/44791](#); sample preparation [G01N 1/28](#))}

Definition statement

This place covers:

Sample containers with integrated microfluidic components with bulk separation such as filtration or centrifugation. In general, the flow direction of the bulk fluid is the same as the component which is separated. In a bulk separation a certain class of particles/fluid is usually separated from another class as a group. For example, centrifugation leads to a classification of particle groups based on their density.

Relationships with other classification places

When the separation is the only purpose and the device is not combined with sample storage, i.e. not integrated, it should not be classified in this group.

B01L 3/502761

{specially adapted for handling suspended solids or molecules independently from the bulk fluid flow, e.g. for trapping or sorting beads, for physically stretching molecules (investigating characteristics of particles [G01N 15/00](#))}

Definition statement

This place covers:

Handling of suspended solids or molecules independent from the bulk fluid flow. In general, the fluid flow direction of the bulk fluid is different from the flow direction of the component to be separated. Handling may comprise trapping, sorting, stretching, orientating of particles or molecules.

Usually particles or molecules are handled individually, thus they can be selectively handled irrespective of whether more particles or molecules of the same type/class exist in the sample. For example, a single DNA molecule may be stretched in a nanochannel although the sample comprises many more DNA molecules.

Attention is drawn to the following places, which may be of interest for search:

Separation of solids from solids or fluids by e.g. electric or magnetic means, dielectrophoresis	B03C
Separating or Sorting solids from solids	B07B

Special rules of classification

When particles/molecules are separated as part of a whole class (as bulk) they are classified in [B01L 3/502753](#).

Details of particle/molecule handling can be coded in [B01L 2200/0647](#).

B01L 3/502769

{characterised by multiphase flow arrangements}

Definition statement

This place covers:

Sample containers with integrated microfluidic components having multiphase flow arrangements. Multiphase flow is meant to encompass flows where gas/liquid or liquid/liquid interfaces exist and kept during flow of the fluids. The fluids may be immiscible but under certain conditions this may not be necessary.

Special rules of classification

This group is only used in the rare event that none of the groups below are suitable.

B01L 3/502776**{specially adapted for focusing or laminating flows}****Definition statement***This place covers:*

Sample containers with integrated microfluidic components having laminated flow arrangements, such as a sheath flow.

References**Limiting references***This place does not cover:*

Micromixers	B01F 33/30
Investigating characteristics of particles	G01N 15/00

B01L 3/502784**{specially adapted for droplet or plug flow, e.g. digital microfluidics (automatic analysis using a stream of discrete samples in a tube system [G01N 35/08](#))}****Definition statement***This place covers:*

Droplets or plug flow in sample containers with integrated microfluidic components, such as digital microfluidics.

Special rules of classification

For multiple samples double classify with [B01L 3/5085](#).

B01L 3/52

{Containers specially adapted for storing or dispensing a reagent ([B01L 3/02](#) takes precedence; containers for medical or pharmaceutical purposes [A61J 1/00](#); containers in general [B65D](#); storing or dispensing test elements [G01N 33/4875](#); automated reagent dispensing [G01N 35/1002](#))}

Definition statement

This place covers:

Reagent containers.

Relationships with other classification places

Sample containers with integrated reagent containers are not classified in this group. However, if the reagent container is a (modular) unit which can be inserted into a sample container and is thus not an integral part of the sample container it should be classified in this group.
