

F24D

DOMESTIC- OR SPACE-HEATING SYSTEMS, e.g. CENTRAL HEATING SYSTEMS; DOMESTIC HOT-WATER SUPPLY SYSTEMS; ELEMENTS OR COMPONENTS THEREFOR (preventing corrosion [C23F](#); water supply in general [E03](#); using steam or condensate extracted or exhausted from steam engine plants for heating purposes [F01K 17/02](#); steam traps [F16T](#); domestic stoves or ranges [F24B](#), [F24C](#); water or air heaters having heat generating means [F24H](#); combined heating and refrigeration systems [F25B](#); heat exchange apparatus or elements [F28](#); removing furring [F28G](#))

Definition statement

This place covers:

Domestic- or space-heating systems of the following kind:

- Steam central heating systems
- Hot-water central heating systems
- Hot-air central heating systems
- Central heating systems employing heat-transfer fluids not being hot-water or hot-air, e.g. oil, salt, gas
- Central heating systems employing combinations of two or more of the above-mentioned heat transfer fluids
- District heating systems
- Central heating systems using heat accumulated in storage masses
- Other central heating systems
- Electric heating systems (central heating or domestic heating)
- Other domestic- or non-central space-heating systems
- Domestic hot-water supply systems
- Details thereof, including constructional details and control means for heating systems

Relationships with other classification places

Subclass [F24D](#) covers systems for domestic- or space heating in which heat is generated at one location and transmitted by a circuit to a consumer at a different location.

The heaters as such are covered by [F24H](#).

Air-conditioning systems able for cooling and heating are only covered by [F24F](#).

Arrangements for protecting plants by heating, e.g. in gardens, are only covered by [A01G 13/06](#).

Systems for space heating adapted for vehicles are covered by [B60](#) - [B64](#).

Details concerning the heaters as such are covered in [F24H 3/00](#).

Domestic stoves or ranges are covered by [F24B](#) and [F24C](#).

Combined heating and refrigeration systems are covered by [F25B](#).

The components of the heating system, e.g. heat sources or central heating radiators are also classified in other relevant groups:

- burners in [F23B](#)
- arrangements for feeding fuel to burner in [F23K](#)
- air supply, air draught for burner in [F23L](#)
- electric heating means in [H05B](#)

- heat pumps in [F25B](#)
- solar collector or geothermal systems in [F24S](#), [F24T](#)
- heat exchangers in [F28](#)
- valves in [F16K](#)
- pumps [F04](#)
- water supply and sewerage in [E03B](#) and [E03C](#)
- arrangements for controlling temperature in [G05D 23/00](#).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Central heating system	a system in which heat is generated or stored at central sources inside a building and is distributed by means of a transfer fluid to the spaces or areas to be heated within the building
District heating system (less commonly called teleheating)	a system for distributing heat generated in a distant centralized location outside a building and distributed by means of a transfer fluid to multiple buildings or facilities
Domestic hot water heating system	a system for heating tap water coming from the main water supply for domestic use other than space heating, e.g. cooking, cleaning, bathing

F24D 1/00

Steam central heating systems ([F24D 10/00](#), [F24D 11/00](#) take precedence)

Definition statement

This place covers:

Steam central heating systems:

- in combination with systems for domestic water supply
- operating with live steam (i.e. steam produced for heating)
- operating with exhaust steam (i.e. exhaust steam of a generating power plant being used for heating)
- operating with superheated steam
- feed-line arrangements thereof.

Relationships with other classification places

This group cover central heating systems comprising steam as heat transport medium.

Constructional details of steam boilers are covered by [F22B](#).

The special case of using steam or condensate extracted or exhausted from steam engine plants for heating purposes are covered by [F01K 17/02](#).

Details of the steam central heating systems concerning drainage, venting, aerating or control are covered by the relevant subgroup in [F24D 19/1003](#).

Details concerning the heat exchanger	F28D 1/00

F24D 3/00

Hot-water central heating systems ([F24D 10/00](#), [F24D 11/00](#) take precedence)

Definition statement

This place covers:

Hot-water central heating systems:

- combined with solar energy
- with forced circulation, e.g. by pumps
- with the water under high pressure
- in combination with systems for domestic hot-water supply
- arrangements for feeding water into the system
- tube and panel arrangements for ceiling, wall, or underfloor heating
- using heat pumps.

Relationships with other classification places

The hot-water central heating systems in this group do not comprise a storage mass for the central heating transfer fluid. Heating systems with a storage mass for the central heating transfer fluid are covered by [F24D 11/00](#).

Hot-water central heating systems in combination with systems for domestic-hot water supply, where said domestic-hot water supply arrangements are located outside the boiler are covered by [F24D 3/08](#). Devices with the domestic-hot water supply arrangements located within the boiler are covered by [F24H 1/48](#).

Domestic hot water supply systems are covered by [F24D 17/00](#).

Feed-line arrangements (filling valves, expansion tanks, pumps, distributors), which are exclusively used in hot-water central heating systems are classified in this group. An special case of feed-line arrangement concerning the connection of a water heater to circulation pipes is also covered by [F24H 9/12](#).

Component, e.g. valves, pumps, etc, which are able to be used elsewhere are classified in the relevant subclass in [F16K](#) or [F04](#).

Tube arrangements for ceiling, wall or underfloor heating, where the heating medium is hot-water are covered in [F24D 3/12](#). Floorings in general are covered by [E04F 15/00](#). Coverings or linings (walls, ceilings, etc) having conduits for fluids, in [E04F 13/0869](#). The special use of the coverings or floorings for heating is covered by the group [E04F 2290/023](#).

Electric underfloor heating is only covered by [F24D 13/02](#).

Hot-water central heating systems in which additional heating means are located within the central heating radiators are covered by [F24D 13/04](#).

Cooling ceilings are covered by [F24F 5/00](#).

Heating floor for outdoor is covered by [E01C 11/00](#).

Details of the hot-water central heating systems concerning drainage, venting, aerating or control are covered by the relevant subgroup in [F24D 19/08](#).

F24D 5/00

Hot-air central heating systems ([F24D 10/00](#), [F24D 11/00](#) take precedence; air conditioning [F24F](#)); Exhaust gas central heating systems

Definition statement

This place covers:

Hot-air central heating systems:

- the heat source being solar energy
- operating with discharge of hot air into the space or area to be heated
- operating without discharge of hot air into the space or area to be heated
- using heat pumps.

Relationships with other classification places

Air conditioning systems heating and cooling air are classified only in [F24F](#).

In the systems using a heat pump, the condenser is placed in the air channel for heating the air. There is no additional intermediate circuit between the cooling fluid of the heat pump and the air.

Arrangements with heat pumps heating a water circuit, said water circuit being used for heating air are covered in [F24D 3/18](#).

Details of the control of hot-air central heating systems are covered by the relevant subgroup in [F24D 19/1084](#).

This place does not cover:

District heating systems	F24D 10/00
Central heating systems using heat accumulated in storage masses	F24D 11/00

F24D 10/00

District heating systems

Definition statement

This place covers:

District heating systems with:

- domestic delivery stations having a heat exchanger
- direct domestic delivery stations

"District heating system" (less commonly called teleheating) is a system for distributing heat generated in a distant centralized location outside a building and distributed by means of a transfer fluid to multiple buildings or facilities. In the normal central heating systems, the heat source is located within the building.

Relationships with other classification places

District heating systems with heat accumulated in storage masses are covered by [F24D 11/001](#).

References

Informative references

F24D 11/00

Central heating systems using heat accumulated in storage masses (self-contained storage heating units [F24D 15/02](#); storage masses, see the relevant subclasses)

Definition statement

This place covers:

Central heating systems using heat accumulated in storage masses, in particular:

- district heating systems
- water heating systems
- air heating systems
- using heat pumps

Relationships with other classification places

The central heating systems in this group comprise a storage mass for the central heating transfer fluid. This storage mass can stay in the tank or be able to flow outside for being used. Details concerning tanks which storage mass staying in the tank are covered by [F24H 7/00](#). Details concerning water storage tanks with water being able to flow outside for being used are covered by [F24H 1/18](#). Details of the tanks as such are covered by [F28D 20/00](#)

Systems comprising a further storage tank for domestic hot water are classified in [F24D 3/08](#).

Central heating systems using heat accumulated in storage masses using heat pumps are covered by [F24D 11/02](#).

Arrangements for domestic- or space-heating systems consisting of self-contained heating units (i.e. not connected to a central unit) using heat pumps are covered in [F24D 15/02](#).

Details of storage heaters heating a fluid using a heat pump are also covered by [F24H 4/04](#).

Domestic hot-water with accumulation of heated water are covered in [F24D 17/00](#).

Details of the control central heating systems are covered by the relevant subgroup in [F24D 19/1006](#).

References

Heat pumps as such	F25B 30/00
Heat storage plants or apparatus in general	F28D 20/00

F24D 12/00

Other central heating systems

Definition statement

This place covers:

Arrangements of central heating systems in which a combination of more than one heat source is disclosed.

In particular, this class covers central heating systems without an storage mass recuperating waste heat source with a separate flue gas condenser.

The cases in which one of the heat sources is a heat pump are classified in other relevant subclasses.

Relationships with other classification places

Condensing boilers, in which the means adapted for extracting latent heat from the flue gases by means of condensation are located within the boiler are classified in [F24H 8/00](#).

Cogeneration machines are classified in [F02G](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Cogeneration machines	F02G
Condensing boilers, in which the means adapted for extracting latent heat from the flue gases by means of condensation are located within the boiler are classified	F24H 8/00

F24D 13/00

Electric heating systems (electric water or air heaters [F24H](#))

Definition statement

This place covers:

- Electric heating systems solely using resistance heating, e.g. under-floor heating
- Electric heating systems using electric heating of heat-transfer fluid in separate units of the system, e.g. radiators connected to the central heating systems by fluid pipes comprising additional electric heating means.

Relationships with other classification places

Self-contained air heaters are classified in [F24H 3/00](#).

Central heating radiators comprising additional heating means located within the radiator are covered in [F24D 13/04](#).

Details of electric heating means as such are covered by [H05B 3/00](#).

Details of the control for electric heating systems are covered by the relevant subgroup in [F24D 19/1096](#).

Flooring	E04F 15/00
Ohmic-resistance heating	H05B 3/00

F24D 15/00

Other domestic- or space-heating systems

Definition statement

This place covers:

Other domestic- or non-central space-heating systems, in particular:

- self-contained heating units, e.g. storage heaters
- using heat pumps. This class covers arrangements in which the refrigerant of the heat pump flows directly through the radiator or the heating panel and transfers heat to the space to be heated without an intermediate hot water central heating circuit being located between the heat pump loop and the space to be heated.

Domestic hot-water supply systems (combined with domestic- or space-heating systems [F24D 1/00](#) - [F24D 15/00](#))

Definition statement

This place covers:

Domestic hot-water supply systems using

- solar energy
- heat pumps
- conventional heating means
- combination of different kinds of heating means.

Domestic hot-water supply systems comprising arrangements for preventing the occurrence or proliferation of microorganisms in the water

Domestic hot-water supply systems comprising recirculation systems.

Relationships with other classification places

Details of the control for domestic hot-water systems are covered by the relevant subgroup in [F24D 19/1051](#).

Hot-water central heating systems combined with systems for domestic hot water supply are covered by [F24D 3/08](#).

Treatments of water for preventing the occurrence of microorganisms in general is covered by [C02F 1/00](#). Devices for preventing the contamination of domestic plumbing installation are covered in [E03C 1/00](#).

F24D 19/00

Details (of water or air heaters [F24H 9/00](#); of heat-exchange or heat-transfer apparatus, of general application [F28F](#))

Definition statement

This place covers:

Details of heating systems, in particular:

- Arrangements for connecting central heating radiators to circulation pipes
- Details related to central heating radiators: e.g. humidifiers for radiators, fan arrangements, magnets for attaching a cover, etc.
- devices for preventing or removing corrosion, slime or scale
- devices for preventing damage by freezing
- arrangement of mountings or supports for radiators
- casings, cover lids or ornamental panels, for radiators

- arrangements for drainage, venting or aerating
- arrangement or mounting of control or safety devices.

Relationships with other classification places

This group covers details concerning the heating system and the central heating radiators.

Details concerning the heater, i.e. the device generating the heat, as such are covered by [F24H 9/00](#).

Central heating radiators as such are covered in [F28D 1/00](#).

Arrangements for connecting central heating radiators to circulation pipes are covered by [F24D 19/0002](#).

Arrangements for connecting heat exchanger in general to flow lines are covered by [F28F 9/0246](#).

Arrangements for connecting different sections within a heat exchanger, e.g. radiators, are covered by [F28F 9/26](#).

Devices for preventing or removing corrosion, slime or scale are covered by [F24D 19/0092](#).

Filters in general are covered by [B01D 29/00](#).

Anodic or cathodic protection in general is covered by [C23F 13/00](#).

Arrangements of mounting or support for central heating radiators are covered by [F24D 19/02](#).

Mounting arrangements for special applications fixed on a central heating radiator are classified in the relevant subclass:

- Towel racks: [A47K 10/06](#)
- Towel grips or hooks: [A47K 10/12](#)
- drying lines for attachment to central heating radiators: [D06F 57/127](#).

Arrangements for drainage, venting or aerating specially adapted for heating systems are covered in this group.

Draining valves or venting valves being able to be used elsewhere are classified in the relevant subclass in [F16K](#).

Details of the control for heating systems are covered by the relevant subgroup in [F24D 19/00](#).

Arrangements for control of temperature and algorithm therefore are also covered by [G05D 23/00](#).
