**H02J**

CIRCUIT ARRANGEMENTS OR SYSTEMS FOR SUPPLYING OR DISTRIBUTING ELECTRIC POWER; SYSTEMS FOR STORING ELECTRIC ENERGY

**Definition statement**

*This place covers:*

- ac and/or dc supplying systems
- ac and/or dc distribution networks
- circuit arrangements for battery supplies, including charging or control thereof, or co-ordinated supply from two or more sources of any kind
- circuit arrangement providing remote indication and control of a network switch
- systems for supplying or distributing electric power by electromagnetic waves

**References**

**Application-oriented references**

Additional use of power line or power network for transmission of information | H04B

Special rules of classification

Claimed devices, systems, and methods always have to be classified. If there is additional information disclosed, then indexing codes for the additional information must be allocated.

If a breakdown indexing code of the subclass H02J (only for additional information) is given, it must always be accompanied by a main trunk symbol under H02J, for invention or additional information.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

| Wireless energy transfer | non-conductive energy transfer, even if conductors can be used for implementing the separated sending and receiving units |

H02J 1/00

Circuit arrangements for dc mains or dc distribution networks

References

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

| Arrangements for reducing harmonics or ripples in converters | H02M 1/14 |

H02J 1/10
Parallel operation of dc sources

Definition statement
This place covers:
Circuit arrangements, systems and methods for the parallel connection of DC sources. Parallel operation must be interpreted as the operational characteristics allowing that the parallel-connected sources supply the load, for instance, how to share the load among the different sources, or how to sequentially switch different power sources on.

References
Application-oriented references
Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

| Parallel operation of dc sources involving batteries | H02J 7/34 |

H02J 1/102
{being switching converters (H02J 1/108, H02J 1/12 take precedence)}

Definition statement
This place covers:
Parallel operation of DC sources, where the sources are switched mode power supplies (SMPS), i.e. power electronic converters with a DC output.

References
Limiting references
This place does not cover:

| Parallel operation of dc sources using diodes blocking reverse current flow | H02J 1/108 |
| Parallel operation of dc generators with converters, e.g. with mercury-arc rectifier | H02J 1/12 |
Informative references

Attention is drawn to the following places, which may be of interest for search:

| Conversion of dc power input into dc power output without intermediate conversion into ac by static converters using semiconductor devices as final control devices for a single load | H02M 3/158 |
| Single converters with a plurality of output stages connected in parallel | H02M 3/285 |

H02J 1/108

{using diodes blocking reverse current flow (H02J 1/12 takes precedence)}

References

Limiting references

This place does not cover:

| Parallel operation of dc generators with converters, e.g. with mercury-arc rectifier | H02J 1/12 |

H02J 1/14

Balancing the load in a network

Definition statement

This place covers:

Balancing the load in a DC distribution network, either by avoiding overloading one section of the network, or by load shedding

Relationships with other classification places

Group H02J 1/14, in practice, relates for load shedding. Load balancing by buffering is classified in group H02J 7/34.

References

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

| Balancing the load in a network by batteries | H02J 7/34 |

H02J 3/00

Circuit arrangements for ac mains or ac distribution networks

Definition statement

This place covers:

- Arrangements for selectively connecting the load to one among a plurality of power lines or power sources
- Arrangements for reducing harmonics or ripples
• Arrangements using a single network for simultaneous distribution of power at different
  frequencies; using a single network for simultaneous distribution of ac power and of dc power
• Arrangements for connecting networks of the same frequency but supplied from different sources
• Constant-current supply systems
• Arrangements for adjusting, eliminating, or compensating reactive power in networks
• Arrangements for preventing or reducing oscillations of power in networks
• Arrangements for eliminating or reducing asymmetry in polyphase networks
• Arrangements for balancing of the load in a network by storage of energy
• Arrangements for transfer of electric power between networks of substantially different frequency
• Arrangements for transfer of electric power between ac networks via a high-tension dc link
• Arrangements for parallely feeding a single network by two or more generators, converters or
  transformers

| Vehicle-to-grid [V2G] arrangements                         | B60L 55/00 |
H02J 3/34
Arrangements for transfer of electric power between networks of substantially different frequency

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

| Frequency converters | H02M 5/00 |

H02J 3/38
Arrangements for parallely feeding a single network by two or more generators, converters or transformers

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

| Vehicle-to-grid [V2G] arrangements | B60L 55/00 |
| Parallel connections of DC/AC converters not for feeding a network, but a local load | H02M 7/493 |

H02J 4/00
Circuit arrangements for mains or distribution networks not specified as ac or dc

Definition statement
This place covers:
Circuit arrangements for mains of distribution networks containing both ac and dc (for instance, for planes) or for (rarely) networks whose nature (AC or DC) is not specified

H02J 5/00
Circuit arrangements for transfer of electric power between ac networks and dc networks (H02J 3/36 takes precedence)

Definition statement
This place covers:
Circuit arrangements, systems and methods for supplying a DC load from an AC power source. Only general purpose circuits (not application-oriented/driven) are classified here.
References

Limiting references

This place does not cover:

| Arrangements for transfer of electric power between ac networks via a high-tension dc link | H02J 3/36 |

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Circuit arrangements for dc mains or dc distribution networks | H02J 1/00 |
| Details for sending and receiving coils | H01F |
| Ac/dc or dc/ac converters | H02M 7/00 |

Special rules of classification

A system used for feeding an ac distribution network from the output of DC power source like fuel cells, solar panels belongs to H02J 3/38 and not to H02J 5/00, even if a DC to AC transfer is involved.

H02J 5/005

{with inductive power transfer (for charging H02J 7/025)}

Definition statement

This place covers:

Circuit arrangements for transfer of electric power between ac networks and dc networks by inductive transfer, i.e. the sending coil being part of the source and the receiving coil being part of the load and coupling is in the near field region.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Transmission involving transformers | H02J 3/00 |
| Transmission by means of electromagnetic waves, e.g. microwave, RF, and far-field inductive coupling. In practice, long distance wireless transmission | H02J 50/00 |
| Near-field transmission systems, e.g. inductive loop type | H04B 5/00 |

Special rules of classification

H02J 5/005 should be allocated even, if the power source is not ac mains or if it is not better specified. For example, if the power source is a fuel cell, H02J 5/005 has to be allocated, and additionally H02J2001/004

With regard to wireless power transfer vs wireless battery charging; any document with relevant technical features about near-field inductive power transfer, should come here. If it is involved in battery charging, then double classification under H02J 7/025 must be considered.
**H02J 7/00**

Circuit arrangements for charging or depolarising batteries or for supplying loads from batteries

**Definition statement**

This place covers:

Circuit arrangements for charging batteries. Rarely, general-purpose discharging, battery management, e.g. sequentially discharging batteries, or load-supplying, e.g. when they are not too concerned by the characteristics of the load.

**References**

**Application-oriented references**

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

| Charging stations or on-board charging equipment for electrically-propelled vehicles | B60L 53/00 |
| Details of telephone stands | H04M |

**Informative references**

Attention is drawn to the following places, which may be of interest for search:

| Electrical circuits for vehicles | B60R |
| Vehicle starting circuits | F02D |
| Methods for charging or discharging secondary cells | H01M 10/44 |
| Mechanical details of battery charger alternators | H02K |
| DC/DC power converters | H02M 3/00 |
| AC/DC or DC/AC power converters | H02M 7/00 |
| Perpetuum mobile | H02N |
| Control of alternators | H02P 9/00 |

**Special rules of classification**

If the document deals with the controlled charging of a capacitor, e.g. a supercapacitor, it is mandatory to assign a combination of the symbol H02J 7/345 and CPC symbols, which would apply, if the capacitor was replaced with a battery.

**H02J 7/0027**

{Stations for charging mobile units, e.g. of electric vehicles, of mobile telephones (H02J 7/0021, H02J 7/0026 take precedence)}

**Definition statement**

This place covers:

Battery charging characterized by a physical or electrical arrangement allowing the simultaneous charge of a plurality, i.e. two or more, of mobile units, e.g. mobile phones, machine-tools or electric/hybrid vehicles.
References

Limiting references

This place does not cover:

| Monitoring or indicating circuits | H02J 7/0021 |
| Safety or protection circuits, e.g. overcharge/discharge disconnection | H02J 7/0026 |
| Details of stations for charging electric vehicles, e.g. vehicle recognition or identification, billing or payment, charging columns for electric vehicles, automatic adjustment of relative position, vehicle to grid (V2G) arrangements. | B60L 53/00 |

H02J 7/0077

{the charge cycle being terminated in response to electric parameters (H02J7/0093 takes precedence)}

Definition statement

This place covers:

• Controlling charge in response to current
• Controlling charge in response to voltage
• Controlling charge in response to both current and voltage

References

Limiting references

This place does not cover:

| Regulation of charging current or voltage with introduction of pulses during the charging process | H02J7/0093 |

Synonyms and Keywords

In the definition H02J 7/0077 and subgroups the word "terminated" has to be interpreted as "controlled"

H02J 7/025

{using non-contact coupling, e.g. inductive, capacitive}

Definition statement

This place covers:

Non-contact coupling, i.e. the sending coil or the first capacitor plate being part of the supplying source and the receiving coil or the second capacitor plate being part of the energy receiving circuit and coupling is in the near field region.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Near-field transmission systems, e.g. inductive loop type | H04B 5/00 |
Special rules of classification

The classification symbol H02J 7/025 should be given even if the charging source is not ac mains or if it is unspecified. For example, if the charging source is a photovoltaic cell, classification is made in H02J 7/35 and additionally in H02J 7/025. Features regarding wireless power transfer itself are classified under H02J 50/00.

H02J 7/34

Parallel operation in networks using both storage and other dc sources, e.g. providing buffering (H02J 7/14 takes precedence)

Definition statement

This place covers:
Battery charging where power comes from one or more different DC power sources, e.g. charging from solar arrays. It may further involve the supply of a load and the resulting modes of operation (battery charging, battery supplying the load).

References

Limiting references

This place does not cover:

| Arrangements for charging batteries from dynamo-electric generators driven at varying speed, e.g. on vehicle | H02J 7/14 |

H02J 9/00

Circuit arrangements for emergency or stand-by power supply, e.g. for emergency lighting

Definition statement

This place covers:
Power sources acting when the main source fails, i.e. uninterruptible (on-line and off-line) power supplies [UPS] and back-up power supplies

Power supplies able to operate in a "standby" mode (low power or sleep modes).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

| With provision for charging standby battery | H02J 7/00 |
| UPS for computers | G06F 1/00 |
| UPS for communication stations | H04M |
| Details of lamp | H05B 47/00 |

Special rules of classification

The following Indexing Codes are to be used for classifying additional information:

| H02J 9/007 | power saving operation when no load is present |
H02J 9/02
in which an auxiliary distribution system and its associated lamps are brought into service

Definition statement
This place covers:
Emergency light systems integrated typically by a back-up power source, a set of lamps and a dedicated auxiliary distribution system powering the lamps from the back-up power source

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

A lamp not being an emergency lamp, but a lamp which is normally fed by the mains and during contingency by a battery, even if no dc/ac converters are not involved

H02J 9/061
{for DC powered loads}

Definition statement
This place covers:
Emergency, back-up or standby power supplies integrating power electronic converters for the different power conversions within the units: e.g. rectifiers, battery chargers, voltage regulators.

H02J 11/00
Circuit arrangements for providing service supply to auxiliaries of stations in which electric power is generated, distributed or converted

References
Informative references
Attention is drawn to the following places, which may be of interest for search:

Emergency or standby power supply arrangements

---

<table>

H02J 13/00

Circuit arrangements for providing remote indication of network conditions, e.g. an instantaneous record of the open or closed condition of each circuitbreaker in the network; Circuit arrangements for providing remote control of switching means in a power distribution network, e.g. switching in and out of current consumers by using a pulse code signal carried by the network.

Definition statement

This place covers:

H02J 13/00 covers operation-related documents, i.e. there must be at least switching on/off or generator or load (or information of such an event) or any other similar action (i.e. sending settings of an inverter connecting a photovoltaic array to the power network).

It also covers specific monitoring of power networks (tailored to such application).

Concerning smart grids, documents where the relevant features concern electrical engineering and not ICT technologies, are classified here.

H02J 15/00

Systems for storing electric energy (mechanical systems therefor F01-F04; in chemical form H01M)

Definition statement

This place covers:

Energy storage systems having either relevant power management issues, or having (or be ready/able for) an interaction with the (AC or DC) power network (but with focus on the storage system). The subject-matter stays normally at system level (there are other CPC technical fields dealing with the
specific storage technologies). Under this approach, the group has two subdivisions according to two different technologies:

- Systems for storing electric energy in the form of hydraulic energy
- Systems for storing electric energy in the form of pneumatic energy

### References

#### Limiting references

This place does not cover:

| Mechanical systems therefor | F01 - F04 |
| Systems for storing electric energy in chemical form | H01M |

### H02J 50/00

Circuit arrangements or systems for wireless supply or distribution of electric power

#### Definition statement

This place covers:

Functional and operational aspects of systems for the wireless supply or distribution of electric power, regardless of the type of wireless power transmission used.

Circuit arrangements for the wireless supply or distribution of electric power.

In this main group, wireless supply or distribution of electric power involves both of the following steps:

- (1) conversion of electrical energy from a power source for transfer by wireless transmission;
- (2) reception of the wirelessly transmitted energy and re-conversion into electrical energy for distribution or delivery to an electrical load.

#### References

#### Application-oriented references

| Inductive energy transfer between a charging station and an electric vehicle | B60L 53/12 |
Synonyms and Keywords

In patent documents, the following abbreviations are often used:

| WPT | Wireless Power Transfer |

In patent documents, the following words/expressions are often used as synonyms:
- "cordless power transfer" or "wireless power transmission" or "wireless energy transmission" or "wireless power transfer" or "contactless power transfer"

**H02J 50/05**

using capacitive coupling

**Definition statement**

This place covers:

Circuit arrangements or systems for wireless supply or distribution of electric power using capacitive coupling between the plates of at least two capacitive elements, the plates being located in separate units involved in contactless power transmission.

The figure below is an illustrative example which falls within the scope of this subgroup. In the figure, the pairs of plates 64 and 80, and 66 and 82 create two capacitive elements C1 and C2 through which power is transferred from a power transmitter 52 to a power receiver 54.

| Induction heating | H05B 6/02 |
**H02J 50/12**

of the resonant type

**Definition statement**

*This place covers:*

Circuit arrangements or systems for wireless supply or distribution of electric power using inductive coupling of the resonant type, i.e. in which at least one coil forms part of a resonant circuit.

In the illustrative example, resonant circuits Cr-Cp-Lp and Crs-Cs-Ls constitute a resonant circuit 40 which has a specific resonant frequency \( f_r \) at which the total impedance of the resonant circuit 40 is minimized so that transmission efficiency of electric power between the power emitter circuit in PSU and power receiver circuit in PRU is increased.

**H02J 50/23**

characterised by the type of transmitting antennas, e.g. directional array antennas or Yagi antennas

**Definition statement**

*This place covers:*

Circuit arrangements or systems for wireless supply or distribution of electric power using microwaves or radio frequency waves, characterised by the type of transmitting antennas, e.g. directional array antennas or Yagi antennas.
The figure below is an illustrative example relevant for this subgroup. The directional antenna 11 of the transmitting station 1 sends power to the receiver 21 of the charging device 2.

**H02J 50/27**

characterised by the type of receiving antennas, e.g. rectennas

**Definition statement**

This place covers:

Circuit arrangements or systems for wireless supply or distribution of electric power using microwaves or radio frequency waves characterised by the type of receiving antennas, e.g. rectennas.
The figure below is an illustrative example relevant for this subgroup.

**H02J 50/30**

using light, e.g. lasers

**Definition statement**

*This place covers:*

Circuit arrangements or systems for wireless supply or distribution of electric power using light, e.g. lasers
The figure below is an illustrative example for this subgroup. A laser 19.1 emitted by laser unit 19 heats absorber 20 and heat is converted into electrical energy by thermoelectric element 21.

**H02J 50/40**

using two or more transmitting or receiving devices (**H02J 50/50** takes precedence)

Definition statement

This place covers:

Circuit arrangements or systems for wireless supply or distribution of electric power involving two or more transmitting or receiving devices.
The figure below is also an illustrative example for this subgroup. In the figure, the several transmitting devices transmit electric power to several receiving devices simultaneously.

The figure below is also an illustrative example of this subgroup with two or more receiving devices involved. In the figure, the transmitting device transmits electric power to several receiving devices simultaneously.

Attention is drawn to the following places, which may be of interest for search:

| Radio transmission diversity systems using a plurality of spaced independent aerials | H04B 7/04 |

H02J 50/50

using additional energy repeaters between transmitting devices and receiving devices

Definition statement

This place covers:

Circuit arrangements or systems for wireless supply or distribution of electric power using additional energy repeaters between transmitting devices and receiving devices. The repeater(s) must be physically located between the transmitting devices the receiving devices, and must be separate from them.

The figure below is an example falling within the scope of this subgroup. In the figure, the repeater C2 repeats electric power transmission between the transmitting device C1 and the receiving device C3.
H02J 50/60
responsive to the presence of foreign objects, e.g. detection of living beings

Definition statement
This place covers:
The figure below is an illustrative example for this subgroup. In the figure, the transmitting device 10 detects the presence of the foreign object 30.

Relationships with other classification places
Mechanical aspects related to mechanical removing of foreign object are classified in the relevant field of technology.

H02J 50/90
involving detection or optimisation of position, e.g. alignment

Definition statement
This place covers:
Circuit arrangements or systems for wireless supply or distribution of electric power electrically detecting and/or optimising the relative position between emitters, receivers and repeaters, aiming to increase the efficiency of the wireless power transmission, wherein active parts of these circuit arrangements or systems, e.g. coils or antennas, are involved in the detection and/or optimising of the position.
