NOTE

In this group, magnesium is considered as an alkaline earth metal.

2235/02 . Composition of constituents of the starting material or of secondary phases of the final product

NOTE

Indexing codes C04B 2235/02 - C04B 2235/54 are to be used only if the aspect is not trivial or not standard, e.g. if water is used as a mixing medium for a powder, whereas normally an organic mixing medium is used or if the aspect is not standard, e.g. if water is used as a mixing medium for a powder, whereas normally an organic mixing medium is used or if not the standard alphalumina is used to make an alumina ceramic but gamma-alumina in stead.

2235/30 . Constituents and secondary phases not being of a fibrous nature

NOTES

1. Indexing codes C04B 2235/30 - C04B 2235/549 are to be used only if the aspect is not trivial or not standard, e.g. if water is used as a mixing medium for a powder, whereas normally an organic mixing medium is used or if not the standard alpha-alumina is used to make an alumina ceramic but gamma-alumina in stead.

Example:
- in case spinel is made from a certain clay in stead of from alumina and silica, the clay is coded,
- when calcium zirconate and titania are used to make calcium zirconium titinate, a code should be given for the calcium zirconate constituent while normally calcium oxide or calcium carbonate and zirconia are used.

The titania constituent of the starting mixture is not coded since it is to be expected that a single metal oxide is used to make a mixed metal oxide.
2. In groups C04B 2235/32 - C04B 2235/349 oxides are considered to comprise also metal salts from which they are formed by heating.
