# CPC COOPERATIVE PATENT CLASSIFICATION

C CHEMISTRY; METALLURGY

(NOTES omitted)

### **CHEMISTRY**

- C09 DYES; PAINTS; POLISHES; NATURAL RESINS; ADHESIVES; COMPOSITIONS NOT OTHERWISE PROVIDED FOR; APPLICATIONS OF MATERIALS NOT OTHERWISE PROVIDED FOR
- C09J ADHESIVES; NON-MECHANICAL ASPECTS OF ADHESIVE PROCESSES IN GENERAL; ADHESIVE PROCESSES NOT PROVIDED FOR ELSEWHERE; USE OF MATERIALS AS ADHESIVES (preparation of glue or gelatine C09H)

#### **NOTES**

- 1. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "use of materials as adhesives" means the use of known or new polymers or products;
  - "rubber" includes:
    - a. natural or conjugated diene rubbers;
    - b. rubber in general (for a specific rubber, other than a natural rubber or a conjugated diene rubber, <u>see</u> the group provided for adhesives based on such macromolecular compounds);
      - "based on" is defined by means of Note (3), below.
- 2. In this subclass, adhesives containing specific macromolecular substances are classified only according to the macromolecular substance, non-macromolecular substances not being taken into account.
  - Example: an adhesive containing polyethene and amino-propyltrimethoxysilane is classified in group C09J 123/06.
  - However, adhesives containing combinations of organic non-macromolecular compounds having at least one
    polymerisable carbon-to-carbon unsaturated bond with prepolymers or polymers other than unsaturated polymers of
    groups <u>C09J 159/00</u> <u>C09J 187/00</u> are classified according to the unsaturated non-macromolecular component in group
    C09J 4/06.
  - Example: an adhesive containing polyethene and styrene monomer is classified in group C09J 4/06.
  - Aspects relating to the physical nature of the adhesives or to the effects produced, as defined in group <u>C09J 9/00</u>, if clearly and explicitly stated, are also classified in this subclass.
  - Adhesives characterised by other features, e.g. additives, are classified in group <u>C09J 11/00</u>, unless the macromolecular constituent is specified.
- 3. In this subclass, adhesives comprising two or more macromolecular constituents are classified according to the macromolecular constituent or constituents present in the highest proportion, i.e. the constituent on which the adhesive is based. If the adhesive is based on two or more constituents, present in equal proportions, the adhesive is classified according to each of these constituents.
  - Example: An adhesive containing 80 parts of polyethene and 20 parts of polyvinylchloride is classified in group
     <u>C09J 123/06</u>. An adhesive containing 40 parts of polyethene and 40 parts of polyvinylchloride is classified in groups
     <u>C09J 123/06</u> and C09J 127/06.
- 4. {In groups C09J 101/00 C09J 201/00, any macromolecular constituent of an adhesive composition which is not identified by the classification according to Note (3) after the title of subclass C09J, and the use of which is determined to be novel and non-obvious, must also be classified in a group chosen from groups C09J 101/00 C09J 201/00. This Note corresponds to IPC Note (1) relating to C09J 101/00 C09J 201/00.}
- 5. {Any macromolecular constituent of an adhesive composition which is not identified by the classification according to Note (3) after the title of subclass C09J or Note (4) above, and which is considered to represent information of interest for search, may also be classified in a group chosen from groups C09J 101/00 C09J 201/00. This can, for example, be the case when it is considered of interest to enable searching of adhesive compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information". This Note corresponds to IPC Note (2) relating to C09J 101/00 C09J 201/00.}
- 6. {In groups C09J 165/00 C09J 185/00, in the absence of an indication to the contrary, adhesives based on macromolecular compounds obtained by reactions forming two different linkages in the main chain are classified only according to the linkage present in excess.
  - This Note corresponds to IPC Note (1) relating to CO9J 165/00 CO9J 185/00.}
- {An adhesive composition containing polyethylene and amino-propyltrimethoxysilane is classified in groups <u>C09J 123/06</u> and <u>C08K 5/544.</u>}
- 8. {In this subclass, combination sets [C-Sets] are used. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of C09J.}

C09J (continued)

9. {In addition to Note (8), <u>C08L 2666/00</u> indexing codes were used for C-Sets classification of documents before April 2012 (see also C-Sets search rules in <u>C08L</u>, <u>C09D</u> and in the <u>C09J</u> definition).}

# WARNINGS

1.	The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following
	CPC groups:

C09J 4/02	covered by	<u>C09J 4/00</u>
C09J 4/04	covered by	<u>C09J 4/00</u>
C09J 161/08 - C09J 161/10	covered by	C09J 161/06
C09J 163/02	covered by	C09J 163/00
C09J 183/05	covered by	C09J 183/04
C09J 183/07	covered by	C09J 183/04

2. In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme

1/00	Adhesives based on inorganic constituents	7/205	• • {characterised by the backing impregnating
1/02	<ul> <li>containing water-soluble alkali silicates</li> </ul>		composition}

2203/37	. for repositionable or removable tapes
2301/00	Additional features of adhesives in the form of
2001/00	films or foils
2301/10	characterized by the structural features of the adhesive tape or sheet
2301/12	by the arrangement of layers
2301/122	• • • the adhesive layer being present only on one side of the carrier, e.g. single-sided adhesive tape
2301/124	• • • the adhesive layer being present on both sides of the carrier, e.g. double-sided adhesive tape
2301/1242	• • • the opposite adhesive layers being different
2301/16	by the structure of the carrier layer
2301/162	the carrier being a laminate constituted by plastic layers only
2301/18	characterized by perforations in the adhesive tape
2301/20	• characterized by the structural features of the adhesive itself
2301/202	the adhesive being in the form of fibres
2301/204	the adhesive coating being discontinuous
2301/206	• • the adhesive layer comprising non-adhesive protrusions
2301/208	• • the adhesive layer being constituted by at least two or more adjacent or superposed adhesive layers, e.g. multilayer adhesive
2301/21	• • the adhesive layer being formed by alternating adhesive areas of different nature
2301/30	characterized by the chemical, physicochemical or physical properties of the adhesive or the carrier

2301/302	the adhesive being pressure-sensitive, i.e. tacky at
	temperatures inferior to 30°C
2301/304	• • the adhesive being heat-activatable, i.e. not tacky
	at temperatures inferior to 30°C
2301/306	• the adhesive being water-activatable
2301/308	• the adhesive tape or sheet losing adhesive
	strength when being stretched, e.g. stretch
	adhesive
2301/31	the adhesive effect being based on a Gecko
	structure
2301/312	parameters being the characterizing feature
2301/314	the adhesive layer and/or the carrier being
	conductive
2301/40	characterized by the presence of essential
	components
2301/408	additives as essential feature of the adhesive layer
2301/41	additives as essential feature of the carrier layer
2301/412	presence of microspheres
2301/414	• presence of a copolymer
	NOTE
	771: ' ( 1 1: 1: (' '/1

This group is to be used in combination with C-Sets of C09J 2401/00 - C09J 2499/008 in case a copolymer is present but not a blend.

2301/416	• • use of irradiation
2301/50	<ul> <li>characterized by process specific features</li> </ul>
2301/502	process for debonding adherents
2301/504	process of pretreatment for improving adhesion of
	rubber on metallic surfaces

# <u>Indexing scheme related to the use of materials in adhesive</u> <u>processes in general or adhesives in the form of films or foils</u>

# 2400/00 Presence of inorganic and organic materials

## **NOTE**

In this group, combination sets [C-Sets] are used. Detailed information about the C-Sets construction and the associated syntax rules is present in the definitions of C09J.

2400/10 • Presence of inorganic materials

### **NOTE**

In this group, combination sets [C-Sets] are used. Detailed information about the C-Sets construction and the associated syntax rules is present in the definitions of CO9J.
