H ELECTRICITY

(NOTE omitted)

H04 ELECTRIC COMMUNICATION TECHNIQUE

(NOTE omitted)

H04L TRANSMISSION OF DIGITAL INFORMATION, e.g. TELEGRAPHIC COMMUNICATION (arrangements common to telegraphic and telephonic communication H04M)

NOTES

1. This subclass covers transmission of signals having been supplied in digital form and includes data transmission, telegraphic communication, or methods or arrangements for monitoring.
2. In this subclass, it is desirable to add the indexing codes of group [H04L 2101/00](#).

Network arrangements, protocols or services for supporting real-time applications in data packet communication (real-time or near real-time messaging, e.g. instant messaging [IM] [H04L 51/04](#); selective video distribution [H04N 21/00](#))

NOTES

1. {This group covers:
 - only communications which fulfill the following two conditions:
 - i. they are based on packet data;
 - ii. there is real-time or pseudo-real-time temporal association between source and destination, or source and network, or destination and network;
 - provided that the above two conditions are met, this group covers arrangements relating to
 - a. the transmission of the multimedia data itself,
 - b. the user-to-user, user-to-network, inter-network or intra-network signalling supporting:
 - b1. the establishment of a session for the subsequent transmission of the multimedia data, or
 - b2. the maintenance of the session or
 - b3. the application services available to the user during the session (unless explicitly excluded in certain cases). }
2. {This group does not cover:
 - non-real-time multimedia file transfer, which is covered by group [H04L 67/06](#);
 - multimedia store or forward messaging as in e-mail, MMS or the like, which is covered by group [H04L 51/00](#);
 - analogue video streaming, as in analogue television systems, which is covered by group [H04N 7/00](#);
 - selective distribution of MPEG elementary or transport streams, containing video and/or additional data, which is covered by group [H04N 21/00](#);
 - bit streaming, i.e. not packet-based, such as in ISDN, which is covered by group [H04Q 11/0428](#);
 - instant messaging, which is covered by group [H04L 51/04](#);
 - any other multimodal data communications which do not meet the conditions of being packet-based and real-time or pseudo-real-time;
 - flow control in packet switching networks, which is covered by group [H04L 47/10](#). }

NOTES

1. This group covers:

1. Networking arrangements or communication protocols to support networked applications which occur at the abstract network layers 5 to 7 of the OSI layer model. The higher layers constitute the interface between the network and the computer applications that use the network to communicate.
2. Network-specific aspects of client-server applications as well as of networking arrangements supporting networked/distributed applications, e.g. data transport, scheduling. This group also covers specific networked application layer protocols, e.g. FTP, WAP, HTTP.

2. This group does not cover:

1. Distributed applications which are network-agnostic, i.e. distributed information systems for which the network functions are transparent. These field are covered, e.g. by [G06F 9/00](#), [G06F 17/00](#). Data switching network provisions in general and the lower layer network functionalities which support application layer provisions are covered by [H04L 12/00](#)

2101/365	. . Application layer names, e.g. buddy names, unstructured names chosen by a user or home appliance name	2203/04	. continuous phase
2101/37	. . E-mail addresses	2209/00	Additional information or applications relating to cryptographic mechanisms or cryptographic arrangements for secret or secure communication H04L 9/00
2101/375	. . Access point names [APN]	2209/04	. Masking or blinding
2101/38	. . Telephone uniform resource identifier [URI]	2209/043	. . of tables, e.g. lookup, substitution or mapping
2101/385	. . Uniform resource identifier for session initiation protocol [SIP URI]	2209/046	. . of operations, operands or results of the operations
2101/39	. . Globally routable user-agent uniform resource identifier [GRUU] for the session initiation protocol [SIP]	2209/08	. Randomization, e.g. dummy operations or using noise
2101/395	. . Internet protocol multimedia private identity [IMPI]; Internet protocol multimedia public identity [IMPU]	2209/12	. Details relating to cryptographic hardware or logic circuitry
2101/60	. Types of network addresses	2209/122	. . Hardware reduction or efficient architectures
2101/604	. . Address structures or formats	2209/125	. . Parallelization or pipelining, e.g. for accelerating processing of cryptographic operations
2101/618	. . Details of network addresses	2209/127	. . Trusted platform modules [TPM]
2101/622	. . . Layer-2 addresses, e.g. medium access control [MAC] addresses	2209/16	. Obfuscation or hiding, e.g. involving white box
2101/627	. . . Controller area network [CAN] identifiers	2209/20	. Manipulating the length of blocks of bits, e.g. padding or block truncation
2101/631	. . . Small computer system interface [SCSI] addresses	2209/24	. Key scheduling, i.e. generating round keys or sub-keys for block encryption
2101/636	. . . IEEE1394 identification numbers	2209/26	. Testing cryptographic entity, e.g. testing integrity of encryption key or encryption algorithm
		2209/30	. Compression, e.g. Merkle-Damgard construction
		2209/34	. Encoding or coding, e.g. Huffman coding or error correction
		2209/42	. Anonymization, e.g. involving pseudonyms
		2209/46	. Secure multiparty computation, e.g. millionaire problem

2463/00 Additional details relating to network architectures or network communication protocols for network security covered by [H04L 63/00](#)

- 2463/041 . using an encryption or decryption engine integrated in transmitted data
- 2463/061 . applying further key derivation, e.g. deriving traffic keys from a pair-wise master key
- 2463/062 . applying encryption of the keys
- 2463/081 . applying self-generating credentials, e.g. instead of receiving credentials from an authority or from another peer, the credentials are generated at the entity itself
- 2463/082 . applying multi-factor authentication
- 2463/101 . applying security measures for digital rights management
- 2463/102 . applying security measure for e-commerce
- 2463/103 . applying security measure for protecting copyright
