*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T = existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets } are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets } are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level, and title are required for all types.
- “Transferred to” column must be completed for all C, D, F, and Q type entries. F groups will be deleted once reclassification is completed.
- When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “<administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.
- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD>, <administrative transfer to XX INV>, or <administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.

- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.
- For finalization projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.
- For more details about the types of scheme change, see CPC Guide.

M	A01B51/00 – A01B75/00	Parts, details or accessories of agricultural machines or implements, in general (seat constructions A47C; wheels B60B; shelters for drivers B60J; seats specially adapted for vehicles B60N2/00; wheel scrapers B60S1/68)	Parts, details or accessories of agricultural machines or implements, in general

*N = new guidance heading, M = modified guidance heading, D = deleted guidance heading

NOTES:

- The “Location” column requires the symbol AFTER the guidance heading location. No further directions such as “before” or “after” are required.
- In cases where there may be confusion as to whether a new group falls within the scope of a guidance heading, indicate the guidance heading and whether the group does or does not go with the guidance heading. This can be included in the “Location” column. For example, the guidance heading “Compounds containing carbon together with sulfur, selenium or tellurium with or without hydrogen, halogens, oxygen or nitrogen” encompasses groups C07C 301/00-395/00 only. If a new group C07C 398/00 is proposed and is included in the guidance heading scope, indicate this in the “Location” column as follows: 398/00 to be included under the guidance heading: “Compounds containing carbon together with sulfur, selenium or tellurium with or without hydrogen, halogens, oxygen or nitrogen.”

Special rules of classification

Replace: The existing Special rules text with the following updated text.

In subclass [A01B](#) all relevant details of tools, methods, implements or parts of agricultural machinery which are used for an action that will result in furrowing, ploughing, tilling, moving, opening or smoothing the soil should be classified here. Some of these parts, tools or methods may not refer directly to a blade for working the soil, but will be, however, directly related to the soil working action, like guiding the machine to work the soil according to a planned path or at a constant depth which are related to the steering of, to the connection or hitch to the tractor. Double classification in other subclasses, like in subclass [A01C](#), is allowed depending on the details. For instance, a coulter for a seeder which has a seed pipe attached, the coulter having no detail relevant for the soil working classification scheme, will only be classified in group [A01C5/00](#). However, a coulter for a seeder, even if it includes a seed pipe, whose action in the soil is described in detail or has some special feature for working the soil, e.g. opening the furrow, may be relevant for subclass [A01B](#).

Special rules of classification

Replace: The existing Special rules text with the following updated text.

When pulling soil working elements, like ploughs or subsoilers, the tractor must provide a certain tractive force while maintaining constant speed. This may be important for some soil working actions in which soil working tools rotate at a speed which is dependent on the forward speed of the tractor. Also for achieving a homogeneous soil working with certain tools when soil compaction or resistance conditions change from one area of the field to the next. Here the resistance of the soil to penetration of the tools is measured, and the motor is adjusted to maintain constant speed or power.

5. CROSS-REFERENCE LIST (CRL)

Scheme references impacted by this revision project

<u>Location of reference to be changed</u>	<u>Referenced subclass or group to be changed</u>	<u>Action; New reference symbol; New text</u>
B26D	A01B	Remove reference from scheme title
B26D	for leather or upholstery B68; C14B;	Replace semicolon with a comma: for leather or upholstery B68, C14B
B62C 3/00	A01B 35/30, A01B 39/24; A01B 51/00	Replace semi-colon with comma: A01B 35/30, A01B 39/24, A01B 51/00

NOTES:

- The CRL tables above are used for changes to locations outside of the project scope. Changes to references in scheme titles or definitions inside the project scope will be reflected in the “scheme change” template or one of the “definition” templates.
- In addition to other changes proposed in the tables above, in the column titled “Referenced subclass or group to be changed,” referenced D symbols should indicate an action of “delete” or should indicate a replacement symbol and referenced F symbols should indicate a replacement symbol.
- When a reference is deleted, text related to that reference will also be deleted unless other references or a range of references associated with the same text remain.
