</table>
Breakdown codes: 2000-Codes in CPC

- 2000-codes come from the conversion of a previously used codification of monomers present in minority and coded for additional information (previous orthogonal ICO codes M08F).
- Said codification had more entries than the C08F trunk (deeper indexing, more sub-groups) than the C08F trunk.

For example:
- C08F 220/10 . . . Esters
- C08F 220/12 . . . of monohydric alcohols or phenols
- C08F 220/14 . . . Methyl esters
- C08F 220/16 . . . of phenols or of alcohols containing two or more carbon atoms
- C08F 220/18 . . . with acrylic or methacrylic acids
- C08F 2220/1808 . . . . Ethyl or undefined short-chain (meth)acrylate
- C08F 2220/1816 . . . . Propyl(meth)acrylate
- C08F 2220/1825 . . . . Butyl(meth)acrylate
- C08F 2220/1833 . . . . Pentyl or undefined long chain (meth)acrylate
- C08F 2220/1841 . . . . Hexyl(meth)acrylate
- C08F 2220/185 . . . . Heptyl(meth)acrylate
- C08F 2220/1858 . . . . (iso)Octyl(meth)acrylate
- etc...
Organisation of the groups in C08F: based on chemical structure of the substituents on the double bond of the monomers

listed according to the nature of the substituent(s) present on the double bond in an order such as: R= H, C, X, O, CO2, (CO)N, N, P
Polyolefins, Styrenics, Vinyl Halides

for example polyolefins
- C08F210/00 alkenes (ethylene, propylene...): R= H; Alk
- C08F212/00 styrenics: R= Phenyl
- C08F214/00 vinyl halides: R=Cl, F...
Vinyl alcohols, ethers and esters

- C08F216/00 vinyl alcohols and ethers thereof, leading to polyvinyl alcohols, polyvinyl ethers (R= H, Alk..)

- C08F218/00 vinyl esters (e.g. leading to polyvinyl acetates) (R= (C=O)-Alk)
## Vinyl alcohols, ethers and esters

</table>
(Meth)acrylic acid, esters, amides, nitriles

C08F220/00 Acrylic and methacrylic acid, esters, nitriles or amides, see table (R= OH, OAlk, NRR’, CN...)
(Meth)acrylic acid, esters, amides, nitriles

- **C08F220/02**: Monocarboxylic acids having less than ten carbon atoms; Derivatives thereof
- **C08F220/04**: Acids; Metal salts or ammonium salts thereof
- **C08F220/06**: Acrylic acid; Methacrylic acid; Metal salts or ammonium salts thereof
- **C08F220/08**: Anhydrides
- **C08F220/10**: Esters
- **C08F220/12**: of monohydric alcohols or phenols
- **C08F220/14**: Methyl esters MMA
- **C08F220/16**: of phenols or of alcohols containing two or more carbon atoms
- **C08F220/18**: with acrylic or methacrylic acids
- **C08F220/1808**: Ethyl(meth)acrylate
- **C08F220/1816**: Propyl(meth)acrylate
- **C08F220/1825**: Butyl(meth)acrylate
- **C08F220/1833**: Pentyl(meth)acrylate
- **C08F220/1841**: Hexyl(meth)acrylate, phenyl (meth)acrylate
- **C08F220/185**: Heptyl(meth)acrylate, benzyl (metha)crylate
- **C08F220/1858**: (iso)Octyl(meth)acrylate, 2-ethylhexyl(meth)acrylate
- **C08F220/1866**: C9-(meth)Acrylate
- **C08F220/1875**: (iso)Decyl(meth)acrylate, isobornyl(meth)acrylate
- **C08F220/1883**: Lauryl(meth)acrylate
- **C08F220/1891**: Longer chain (meth)acrylate
- **C08F220/20**: of polyhydric alcohols or phenols 2-hydroxyethyl (meth)acrylate, hydroxypropyl (meth)acrylate, glycerol(meth)acrylate
- **C08F220/22**: Esters containing halogen
- **C08F220/24**: containing perhaloalkyl radicals PFA(Meth)Acrylates
- **C08F220/26**: Esters containing oxygen in addition to the carboxy oxygen
- **C08F220/28**: containing no aromatic rings in the alcohol moiety
- **C08F220/2808**: containing only one oxygen, 2-methoxyethyl(meth)acrylate
- **C08F220/282**: containing two or more oxygen atoms
- **C08F220/283**: containing one or more carboxylic moiety in the chain Acetoacetyl-(meth)acrylate
- **C08F220/285**: containing an ether chain in the alcohol moiety
- **C08F220/286**: containing polyethyleneoxide in the alcohol moiety PEGMA
- **C08F220/287**: containing polypropyleneoxide in the alcohol moiety
- **C08F220/288**: containing polypropylene-co-ethylene oxide in the alcohol moiety
- **C08F220/30**: containing aromatic rings in the alcohol moiety
- **C08F220/301**: containing one oxygen in the alcohol moiety
- **C08F220/302**: containing two or more oxygen atoms in the alcohol moiety
- **C08F220/303**: containing one or more carboxylic moieties in the chain
- **C08F220/305**: containing ether chain in the alcohol moiety
- **C08F220/306**: containing polyethyleneoxide chain in the alcohol moiety
- **C08F220/307**: containing polypropylene oxide chain in the alcohol moiety
- **C08F220/308**: containing polyethylene-co-propylene oxide chain in the alcohol moiety
- **C08F220/32**: containing epoxy radicals
- **C08F220/325**: containing glycidyl radical GMA: glycidyl methacrylate
(Meth)acrylic acid, esters, amides, nitriles

- C08F220/34 . . . Esters containing nitrogen, N,N-dimethylaminoethyl(meth)acrylate
- C08F220/343 . . . . in the form of urethane links
- C08F220/346 . . . . and further oxygen
- C08F220/36 . . . containing oxygen in addition to the carboxy oxygen, 2-N-morpholinoethyl (meth)acrylate or 2-isocyanatoethyl(meth)acrylate
- C08F220/365 . . . . containing further carboxylic moieties
- C08F220/38 . . . . Esters containing sulfur
- C08F220/382 . . . . and containing oxygen, 2-sulfoethyl(meth)acrylate
- C08F220/385 . . . . and containing nitrogen
- C08F220/387 . . . . and containing nitrogen and oxygen
- C08F220/40 . . . Esters of unsaturated alcohols Allyl Acrylate
- C08F220/42 . . . Nitriles
- C08F220/44 . . . . Acrylonitrile
- C08F220/46 . . . . with carboxylic acids, sulfonic acids or salts thereof
- C08F220/48 . . . . with nitrogen-containing monomers
- C08F220/50 . . . containing four or more carbon atoms
- C08F220/52 . . . Amides or imides
- C08F220/54 . . . . Amides, N,N-dimethylacrylamide or N-isopropylacrylamide
- C08F220/56 . . . . . Acrylamide; Methacrylamide
- C08F220/58 . . . . . containing oxygen in addition to the carbonamido oxygen N-Methylol AA, N-acryloyl morpholine
- C08F220/585 . . . . and containing other heteroatoms AMPS
- C08F220/60 . . . . containing nitrogen in addition to the carbonamido nitrogen
- C08F220/603 . . . . . and containing oxygen in addition to the carbonamido oxygen and nitrogen
- C08F220/606 . . . . Monocarboxylic acids having ten or more carbon atoms; Derivatives thereof
- C08F220/64 . . . Acids; Metal salts or ammonium salts thereof
- C08F220/66 . . . Anhydrides
- C08F220/68 . . . Esters
- C08F220/70 . . . Nitriles; Amides; Imides
Maleates and di- or polyfunctionals

- C08F 222/00 Copolymers of compounds having one or more unsaturated aliphatic radicals each having only one carbon-to-carbon double bond, at least one being terminated by a carboxyl radical and containing at least one other carboxyl radical in the molecule; Salts, anhydrides, esters, amides, imides or nitriles thereof

- Maleic anhydride, maleic acids, esters, diallyl maleate, nitriles, imides thereof

- Esters of polyhydric alcohols: ethylene glycol dimethacrylate...(C08F222/1006)
Maleates and di- or polyfunctionals

- C08F 222/00 Copolymers of compounds having one or more unsaturated aliphatic radicals each having only one carbon-to-carbon double bond, at least one being terminated by a carboxyl radical and containing at least one other carboxyl radical in the molecule; Salts, anhydrides, esters, amides, imides or nitriles thereof

C08F 222/00
C08F 222/02 . Acids; Metal salts or ammonium salts thereof: maleic acid, itaconic acid...
C08F 222/04 . Anhydrides, e.g. cyclic anhydrides
C08F 222/06 . Maleic anhydride
C08F 222/08 . with vinyl aromatic monomers maleic/styrene
Maleates and di- or polyfunctional esters

- Maleates and di- or polyfunctional esters
- CO₂R
- C
- O
- R

- Esters of polyhydric alcohols
- Ethylene glycol di(meth)acrylate, 1,4-butanediol dimethacrylate
- Esters of trialkohols: Trimethylpropene tri(meth)acrylate
- Esters of aromatic trialkohols
- Pentaerythritol tetra(meth)acrylate
- Esters of aromatic tetraalkohols
- Esters of aromatic pentaalkohols
- Esters of polycondensation macromers
- Alcohol terminated polyesters or polycarbonates acrylic polyesters
- Alcohol terminated polyethers
- Alcohol terminated (poly)urethanes urethane (meth) acrylates
- Alcohol terminated epoxy functional polymers epoxy polyacrylates
- Ester having no free carboxylic acid groups: dialkyl maleate, fumarate, itaconate...
- C₂H₅O₂R
- CN

- The ester chains containing seven or more carbon atoms
- Monoalkyl maleate, fumarate, itaconate...
- Ester containing halogen
- Ester containing oxygen in addition to the carboxy oxygen
- Ester containing nitrogen
- Ester containing sulfur
- Ester containing unsaturation
- Diester of unsaturated alcohols
- Ester of phenols or saturated alcohols
- Monoalkyl ester
- Alkylic ester: C₂H₅O₂R
- Alkylic ester: C₆H₅O₂R
- Alkylic ester: C₆H₅C₂H₅O₂R
- Alkylic ester: C₆H₅C₂H₅C₂H₅O₂R
- Alkylic ester: C₆H₅C₂H₅C₆H₅O₂R
- Alkylic ester: C₆H₅C₂H₅C₆H₅C₂H₅O₂R
- Alkylic ester: C₆H₅C₂H₅C₆H₅C₂H₅C₂H₅O₂R

- Amides or imides
- C₂H₅N

- Amidic ester
- Amide
- vinyl ester: C₂H₅N
- vinyl ester: C₆H₅N
- vinyl ester: C₆H₅O₂R
- vinyl ester: C₆H₅C₂H₅O₂R
- vinyl ester: C₆H₅C₂H₅C₂H₅O₂R
- vinyl ester: C₆H₅C₂H₅C₆H₅O₂R
- vinyl ester: C₆H₅C₂H₅C₆H₅C₂H₅O₂R

- Nitriles
- C₆H₅CN

- Nitrile
- Nitrile: C₂H₅CN
- Nitrile: C₆H₅N
- Nitrile: C₆H₅C₂H₅N
- Nitrile: C₆H₅C₂H₅C₂H₅N
- Nitrile: C₆H₅C₂H₅C₆H₅N
- Nitrile: C₆H₅C₂H₅C₆H₅C₂H₅N

- Vinylidene cyanide
Heterosubstituted...

- C08F 224/0 containing heterocyclic ring containing oxygen (not acrylates)

- **C08F 230/065**
  - the monomer being a polymerisable additive
  - (meth)acryloyloxy trialkoxy silanes
  - or vinyl trialkoxysilanes
- C08F232/00 unsaturated carbocyclic ring
- C08F234/00 unsaturated heterocycles
- C08F236/00: dienes
- C08F238: acetylenes
- C08F240: copolymers of hydrocarbons and mineral oils
- C08F242/00: drying oils with other monomers
- C08F244/00: Coumarone-indene
Special rules of classification, see CPC-definition

Rule:
• *In a copolymer, the monomer in majority is given an Indexing Code*
• *and the monomer(s) in minority are given Indexing Code(s) in the form of a Combination Set. The Indexing Codes are linked.*
• *The monomer in majority is always indicated first in the Combination set.*

Example: a copolymer having MMA in majority and MAc in minority is classified in:

Single symbol invention:  **C08F220/14**

Combination Set:  **C08F220/14, C08F220/06**

In the Combination sets, it is the first symbol that determines whether the whole Combination set is INV(ention) or ADD(itional).
Main trunk vs 2000-codes in CPC, INV or ADD?

Rule:

- *In a copolymer, the monomer in majority is given an Indexing Code and the monomer(s) in minority are given Indexing Code(s) in the form of a Combination Set. The Indexing Codes are linked.*
- *The monomer in majority is always indicated first in the Combination set.*

- The monomer in majority receives a Single Symbol /CI (INV), the monomers in minority an /CL (ADD) in the form of a Combination set.

- In principle CPC allows using the whole CPC classification as INV or ADD
- All C08F20,120,220 (main trunk) may be used as INV or ADD

However:

- C08F2220 can only be used as ADD
- As the Combination sets is used to specify the co-monomers with highest precision, the whole scheme should be used (interleaved C08F200 and C08F2000) and the Combination set is given as ADD.
Special rules of classification, see CPC-definition

Rule: *In a copolymer, the monomer in majority is given an Indexing Code and the monomer(s) in minority are given Indexing Code(s) in the form of a Combination Set*. The Indexing Codes are linked. The monomer in majority is always indicated first in the Combination set.

Example

A copolymer of

– 50 wt % Butyl acrylate
– 30 wt % Methyl Methacrylate
– 20wt % Acrylic acid

Will receive a Combination set Additional: C08F2220/1825, C08F220/14, C08F220/06 And as Single Symbol Invention: C08F220/18 (for (Butyl) acrylate, use the Main Group)
Classification in practice:

- The classes are given on the basis of the chemical structure of the monomers engaged in the polymerisation.
- Give the lowest and more appropriate sub-group with respect to chemical structure, do not use main-groups unless not otherwise possible.

- We give Combination Sets only when the polymerisation or the structure of the copolymer is explicitly disclosed in the document, either in the general description or in the examples (not for hypothetic polymers or lists of possible monomers that may be used), seldom from claims.

- Ideally, we classify all examples, also when the examples are using comonomers which are in different groups (e.g. ethylene-vinyl acetate, styrene-acrylates..)

- In the documents containing many examples, each comonomer used should appear in at least one Combination Set.

- We classify random copolymers, however graft and block are also considered, see below.

- Pay attention to neighbouring fields epoxies, polyurethanes, coatings, adhesives, cosmetics.
Grafts: C08F251/00 to C08F292/00: Base symbol on the basis of the backbone polymer in the graft

- C08F251/00: onto polysaccharides
- C08F253/00: onto natural rubbers
- C08F255/00: onto polymers of C08F10 (polyolefins)
- C08F257/00: onto polymers of C08F12 (Styrenics)
- C08F259/00: onto polymers of C08F14 (vinyl halides)
- C08F261/00: onto polymers of C08F16 (vinyl alcohols, ethers)
- C08F263/00: onto polymers of C08F18 (vinyl acetates, esters)
- C08F265/00: onto polymers of C08F20/00 (acrylics)
- C08F267/00: onto polymers of C08F22/00 (maleics..)
- C08F269/00-C08F281/00: onto polymers of C08F24/00 to C08F38/00
- C08F283/00: onto polymers of C08G
- C08F285/00: onto preformed graft polymers
- C08F287/00: onto Block copolymers
- C08F289/00: onto polymers not provided for in C08F251/00 to C08F284/00
- C08F290/00: onto polymers modified by introduction of aliphatic unsaturated end or side groups
- C08F291/00 onto polymers according to more than one of groups C08F251/00 to C08F289/00
- C08F292/00: onto inorganic materials
**Grafts**: C08F251/00 to C08F292/00

- **Special rules of classification within this group**
- In C08F251/00 to C08F292/00, the grafted monomer may be indicated using the subdivision of C08F210/00 to C08F238/04 in the form of a **Combination Set**:
  - e.g. cellulose grafted with styrene will be classified in Combination Set C08F251/02, C08F212/08

- This specification of the grafted monomer is used when the monomer is specified in the claims or in the examples.
- If several monomers are grafted, the monomer in **majority** is indicated unless interesting information is present in a **minor** co-monomer, such as monomer bearing reactive functional group or if the monomer is a **crosslinker**, e.g. diacrylate, it is important to indicate it in a Combination Set.
- If the polymer to be grafted is a **copolymer**, the base symbol corresponding to the backbone component in majority is given.
- In cases of co-grafting, i.e. a monomer is reacted in the presence of two backbone polymers, both symbols related to the backbone are given.
- For example co-grafting of a monomer onto a polyethylene and a polysiloxane will be classified in C08F255/02 and C08F283/12 i.e. in two Combination sets,
- For core shell polymers, the order of addition is considered for classification. If a seed polymer is used, it is normally ignored for classification.
Grafts: C08F251/00 to C08F292/00

• **Special rules of classification within this group**

• Example: A core shell polymer obtained by:
  1) polymerization of styrene into **polystyrene**
  2) polymerization of **acrylic acid** in the presence of the polymer obtained in step 1)
  
  Combination set: C08F257/02, C08F220/06

• Example: If the polymer to be grafted is a **copolymer**, the symbol corresponding to the backbone component in majority is given
  1) **ethylene**/ **acrylic acid** (80/20) copolymer
  2) grafted with **MMA**:
  
  Combination set: C08F255/02, C08F220/14

• Long chain PEGMA is considered as a polymer (C08F290/062), also, colloidal stabilisers such as PVOH (C08F261/04)

Provisional application No. 61/322,317, filed on Apr. 9, 2010.

Abstract
Described is the use of synthetic adhesives in the manufacture of corrugated fiberboard at relatively low temperatures and high linear speeds. The corrugated fiberboard includes a corrugated sheet of paper and a flat linerboard and the corrugation of the corrugated sheet of paper is produced at paper temperatures below 95°C and at a linear speed above 150 m/min. The production of the corrugation of a corrugated sheet of paper is immediately followed by a continuous operation in which a preferably unheated corrugated board adhesive is applied and the corrugated sheet of paper is adhered to at least one first linerboard. The corrugated board adhesive used is an aqueous adhesive dispersion based on at least one synthetic, dispersed polymer having preferably more than 40% by weight solids content, selected from acrylate copolymers, copolymers of vinylaromatics and conjugated aliphatic dienes and vinyl acetate-alkylene copolymers, wherein the glass transition temperatures of the polymers are above 20°C and (preferably at least 5°C) below the surface temperature of the corrugated sheet of paper to which they are applied.
Inventive Example 1
[0059] Copolymer formed from 39.5 parts by weight of n-butyl acrylate, 56.5 parts by weight of styrene, 4 parts by weight of methacrylic acid, emulsion polymerized in water in the presence of 0.1 part by weight of tert-dodecyl mercaptan, 1.2 parts by weight of Disponal® FES 27 emulsifier, 0.25 part by weight of Dowfax 2A1 emulsifier, 0.6 part by weight of sodium persulfate (initiator).
[0060] Solids content: 49%, pH 6.2. Tg = 41°C.

Inventive Example 3
[0063] Copolymer formed from 38 parts by weight of n-butyl acrylate, 55 parts by weight of styrene, 5 parts by weight of vinyl acetates, 2 parts by weight of acrylic acid, emulsion polymerized in water in the presence of 0.1 part by weight of tert-dodecyl mercaptan, 1.2 parts by weight of Disponal® FES 27 emulsifier, 0.25 part by weight of Dowfax 2A1 emulsifier, 0.6 part by weight of sodium persulfate (initiator).
[0064] Solids content: 49%. pH 4.0. Tg = 43°C.

Inventive Example 10
[0077] Copolymer formed from 56.5 parts by weight of styrene, 32.0 parts by weight of butadiene, 11 parts by weight of acrylic acid; 0.5 part by weight of itaconic acid, emulsion polymerized in water in the presence of 1.1 parts by weight of tert-dodecyl mercaptan, 0.5 part by weight of Lumilen 1-SC, 0.9 part by weight of sodium persulfate.
[0078] Solids content: 52%, pH 5.0. Tg = 26.3°C.

Styrene, n-Butyl acrylate, Methacrylic acid
Combination Set: C08F212/08, C08F2220/1825, C08F220/06

Styrene, n-Butyl acrylate, Vinyl acetate, Methacrylic acid
Combination Set: C08F212/08, C08F2220/1825, C08F218/08, C08F220/06

Styrene, Butadiene, Methacrylic acid, Itaconic acid
Single Symbol: C08F212/08
Combination Set: C08F212/08, C08F236/10, C08F220/06, C08F222/02
